News from Copilot and M365

Bringing Claude models in Microsoft Copilot into the EU Data Boundary

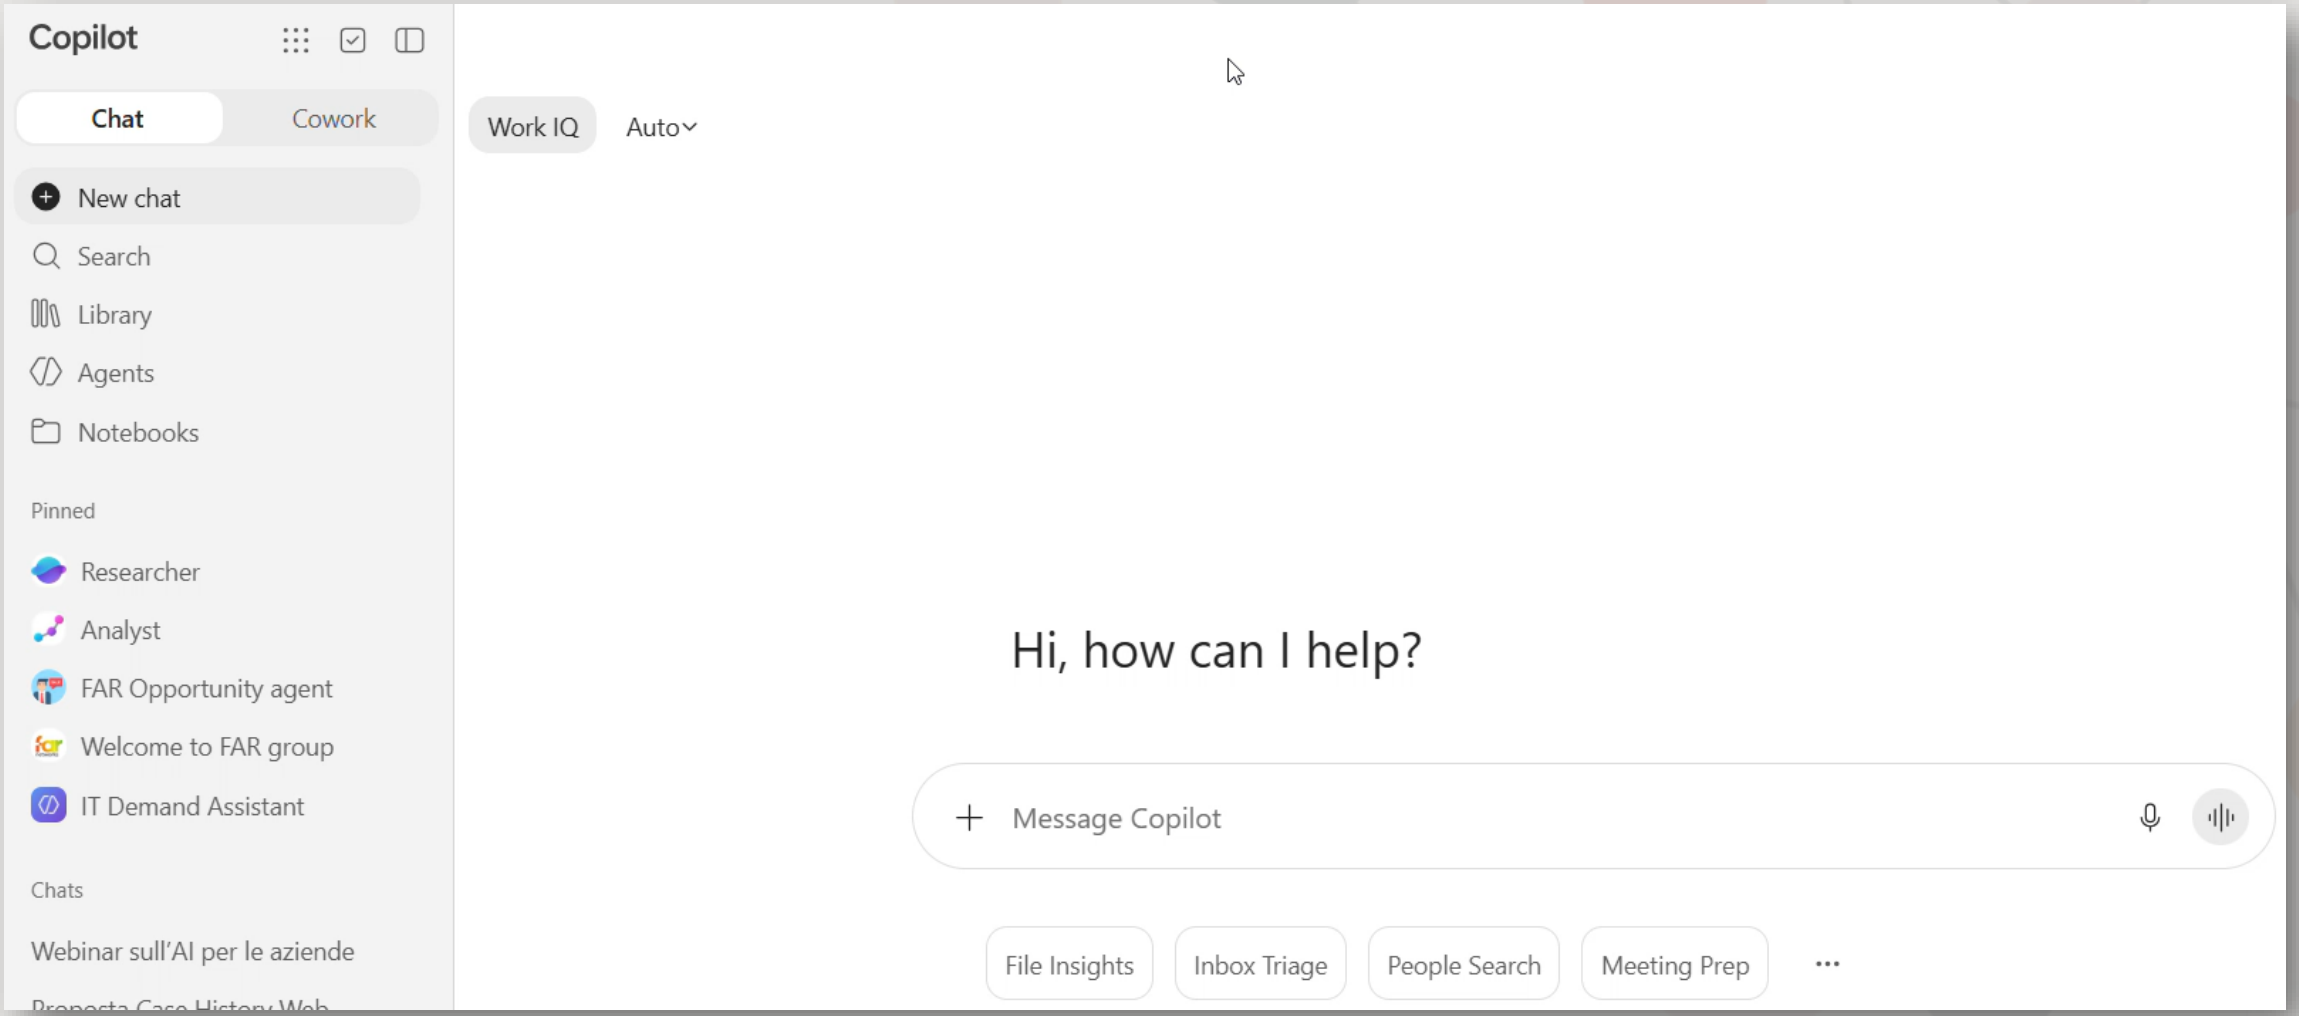

By the end of 2026, Microsoft will bring Anthropic's Claude models in Copilot within the EU Data Boundary for EU and EFTA customers.

- **EU-based processing**: Claude processing will take place within the EU Data Boundary, where customer data is already stored.
- **More AI choice, same governance**: organizations can choose Claude alongside other models while maintaining Microsoft's security, compliance, and administrative controls.
- **Enterprise Data Protection**: customer data is not used to train generative AI foundation models.
- **Admin-controlled access**: IT can enable Claude for all users or selected users and groups through the Microsoft 365 admin center.
- **No migration required**: organizations already using Claude in Copilot will automatically move to EU Data Boundary processing when it becomes available.

OpenAI's GPT-6.1 Sol and Claude Sonnet 5.5 in Microsoft Copilot

Copilot .agents file format will be retired

Agents in SharePoint and OneDrive (.agent file format) will continue to work across SharePoint, Teams, and Copilot app until the **end of March 2027**. With upcoming updates, agent owners can start upgrading each experience.

The right path depends on what each agent helps users accomplish today:

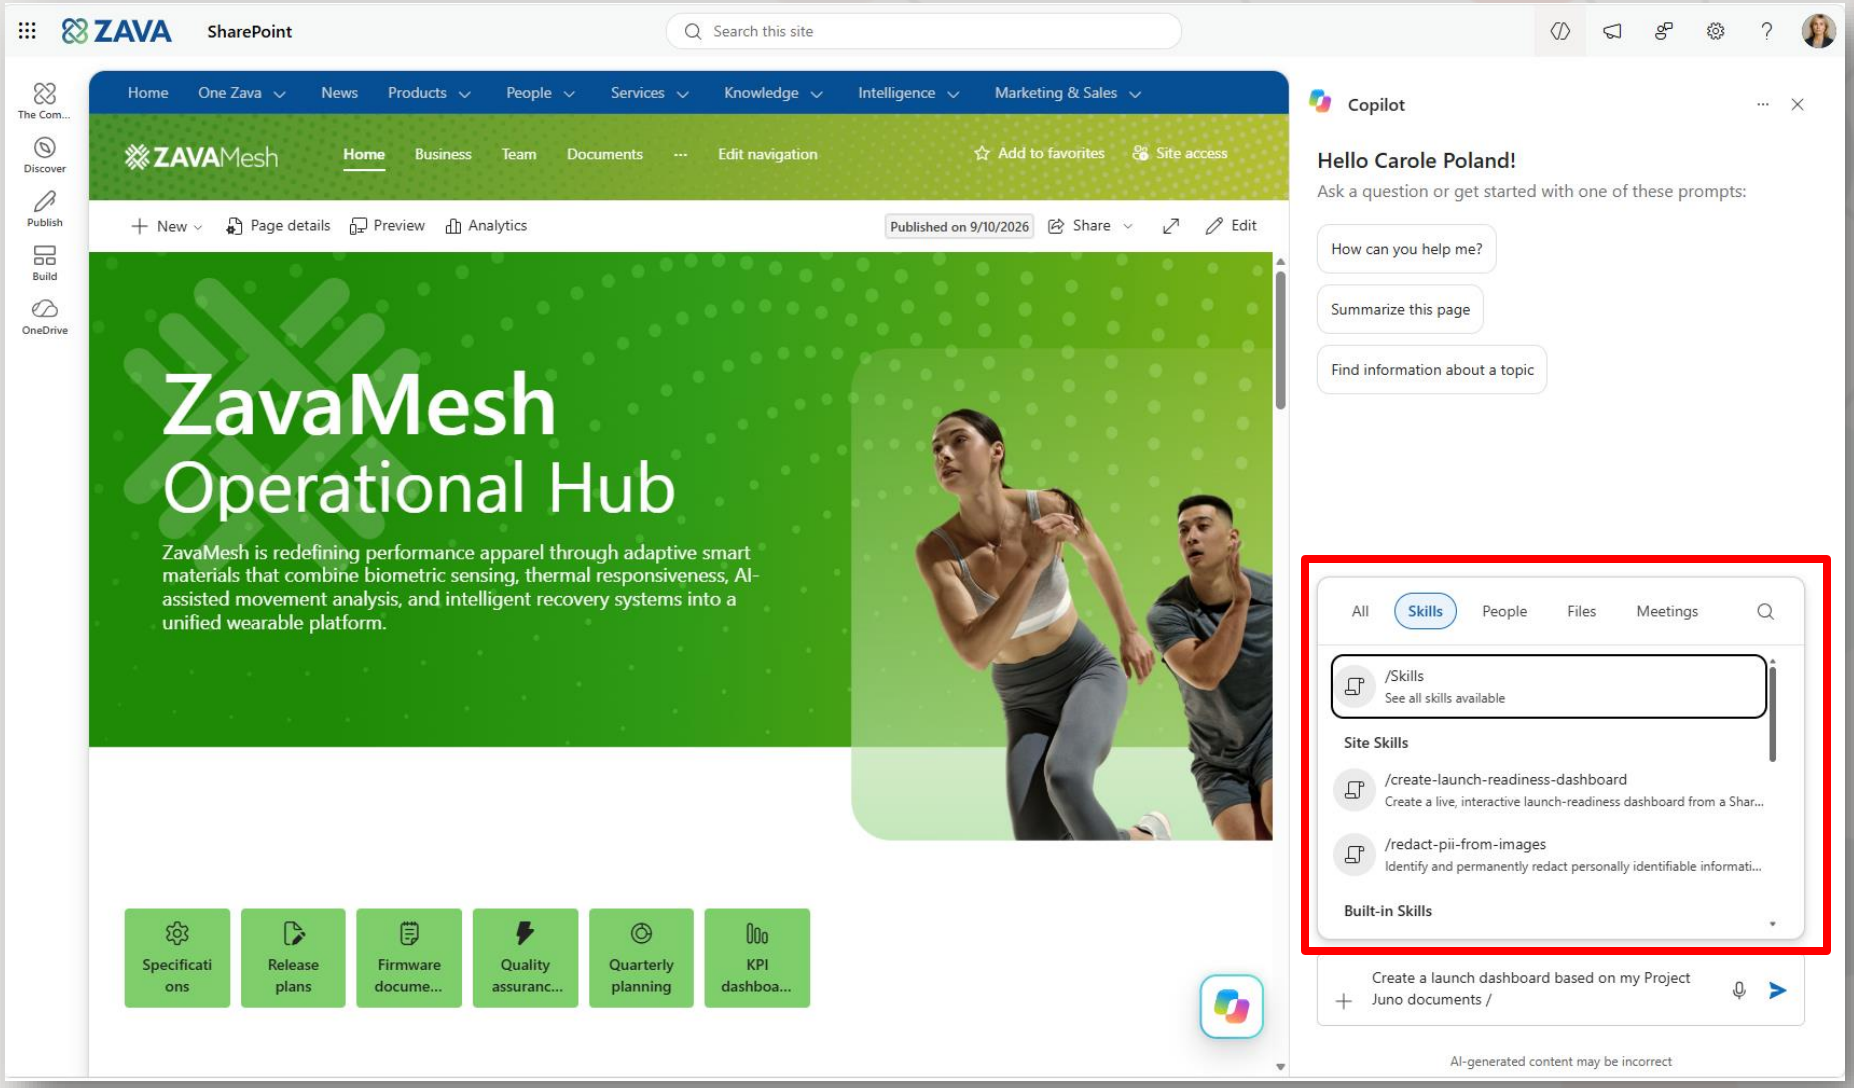

1. Use Copilot in SharePoint for **site-level questions and answers**.
2. **Convert the .agent file to a skill** for Copilot in SharePoint when it supports a focused task or business outcome specific to the site.
3. **Upgrade to a declarative agent** or update your custom engine agent that was published to the SharePoint channel, when users need a content-grounded, conversational experience across Microsoft 365.
4. Well, **skills are way more powerful and easier** to maintain than .agent files.

Agent creation and upgrade: **November - December 2026**

Agents files .agent stop working: **April 2027**

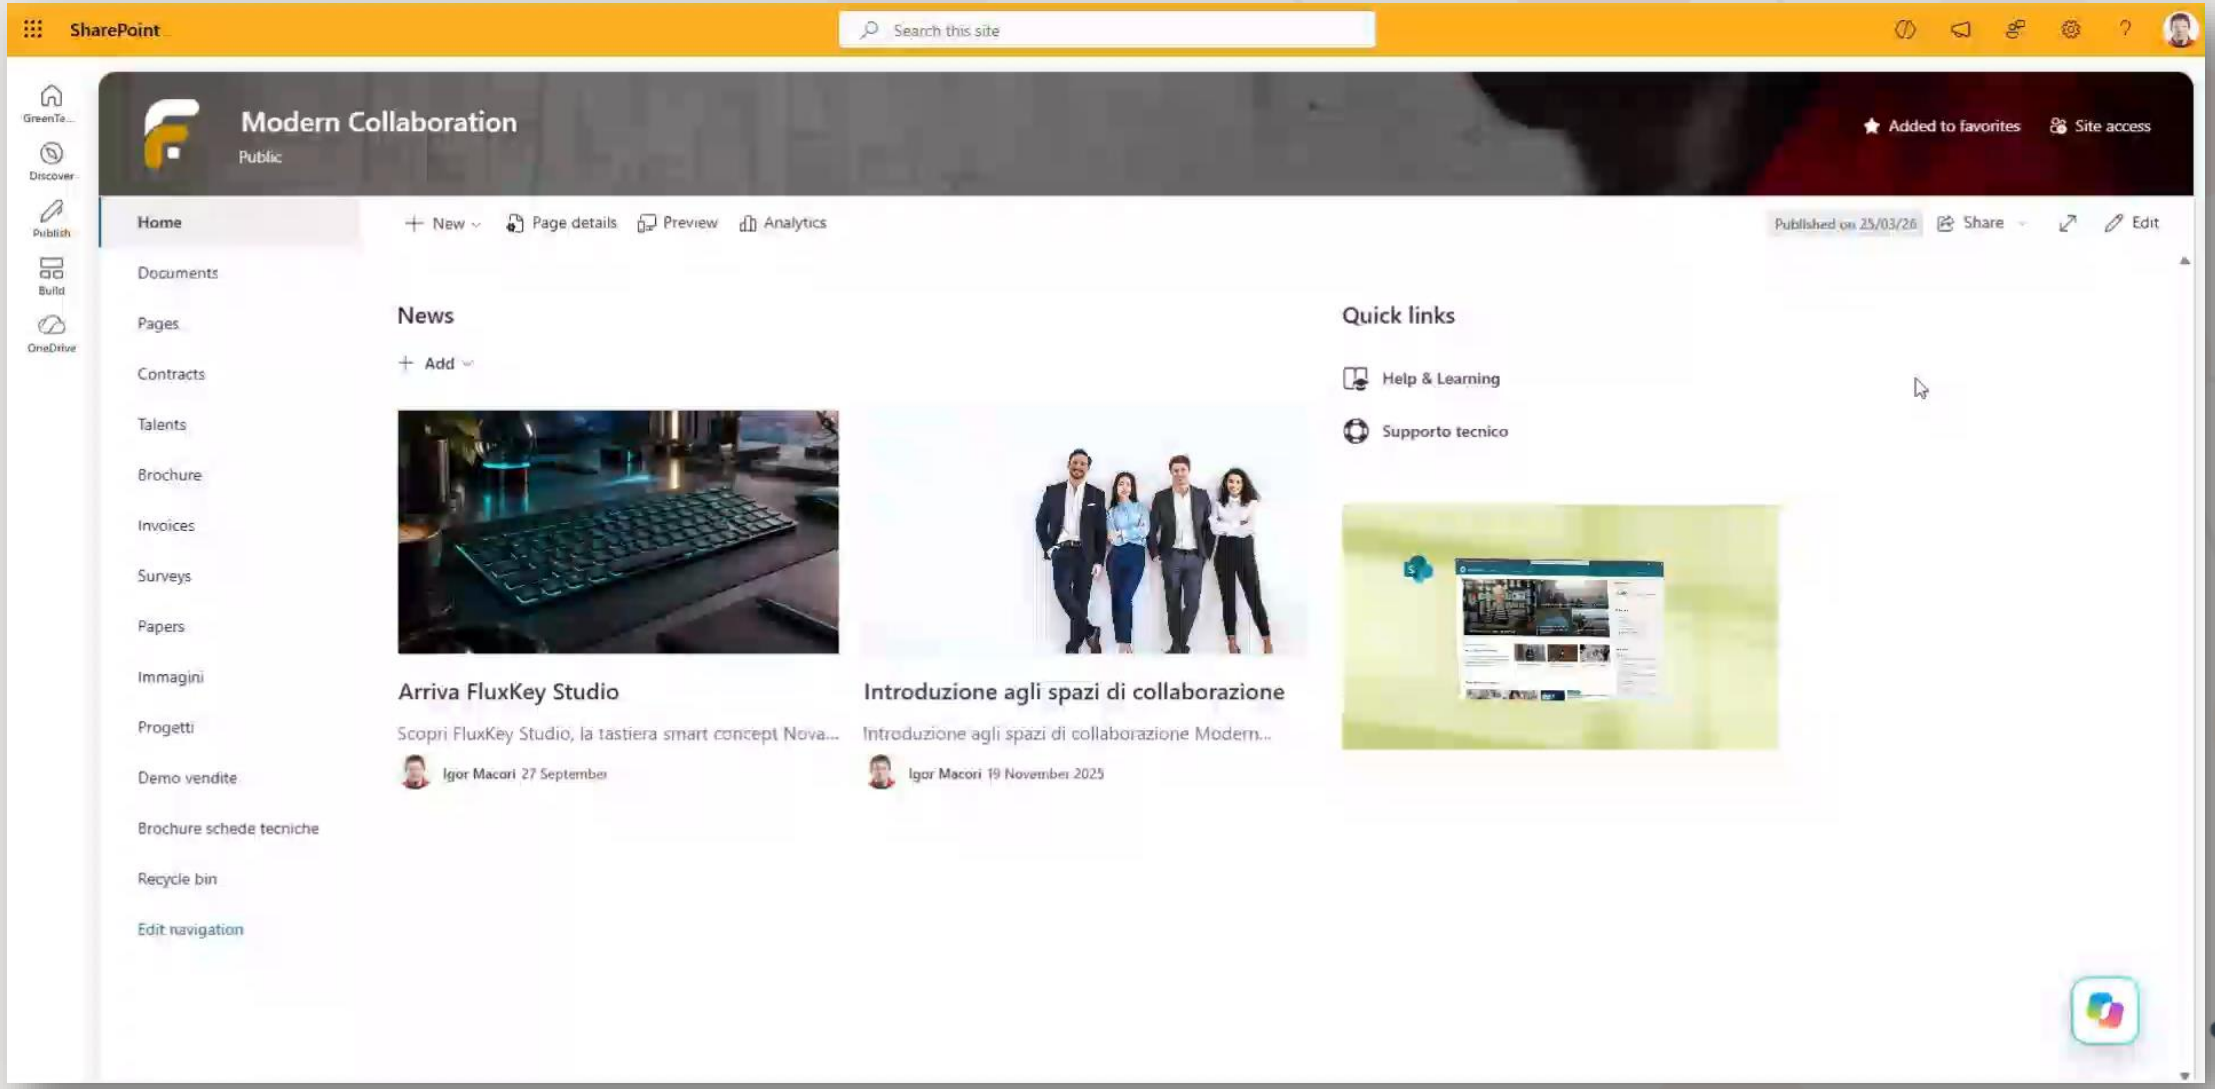

Copilot chat experience is improving

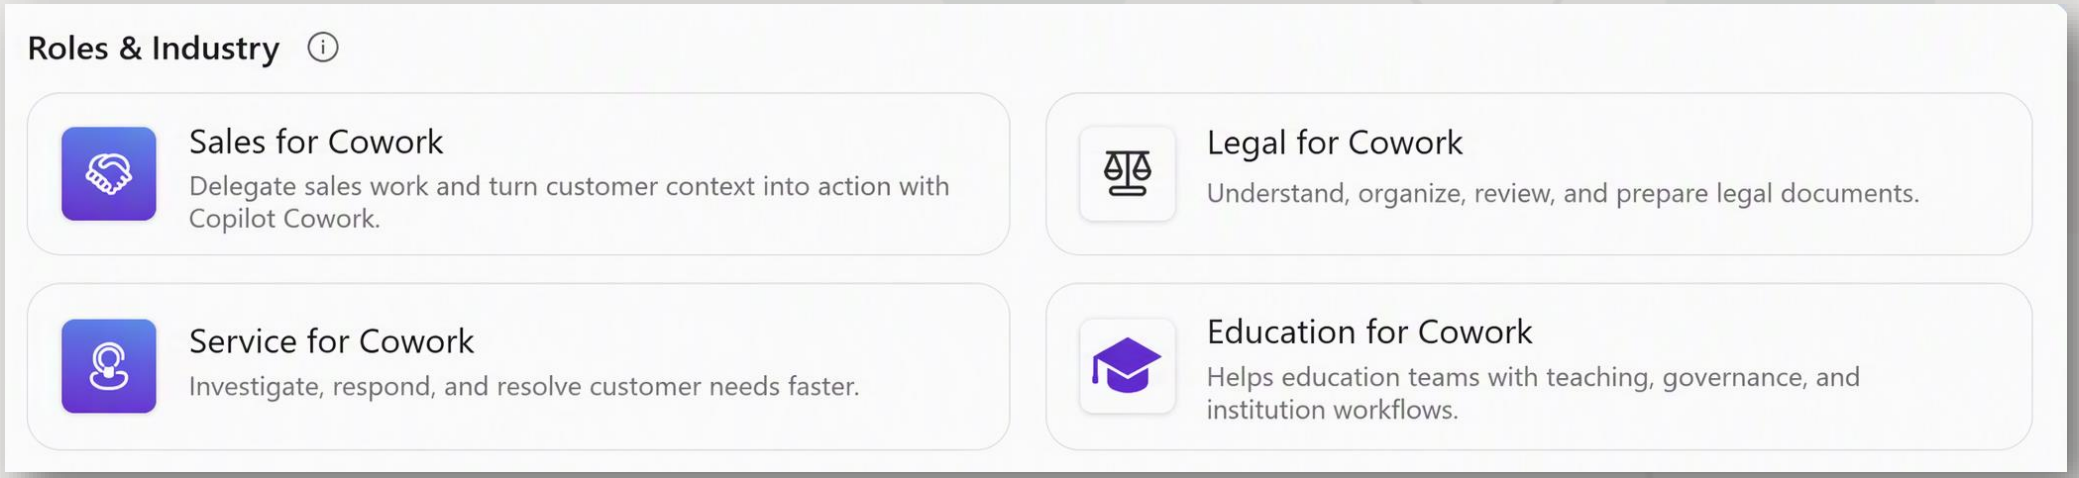

How to use SharePoint Copilot Plug-ins

What’s New in Cowork: Expanded plugins and role-based skills

- Introducing **tailored skills for Sales, Service, Education, and Legal roles** along with an expanded library of plugins.

  - Role-based plugins

Microsoft Entra Conditional Access Policy Plans

PUBLIC PREVIEW

One security objective. Shared targeting. Multiple independent rules.

Why policy plans?

- Reduce duplicated assignments and exclusions
- Apply shared conditions consistently
- Manage related controls in one place
- Each rule is still evaluated separately at sign-in

POLICY PLAN • Corporate device access

SHARED • Employee targeting + emergency access exclusions

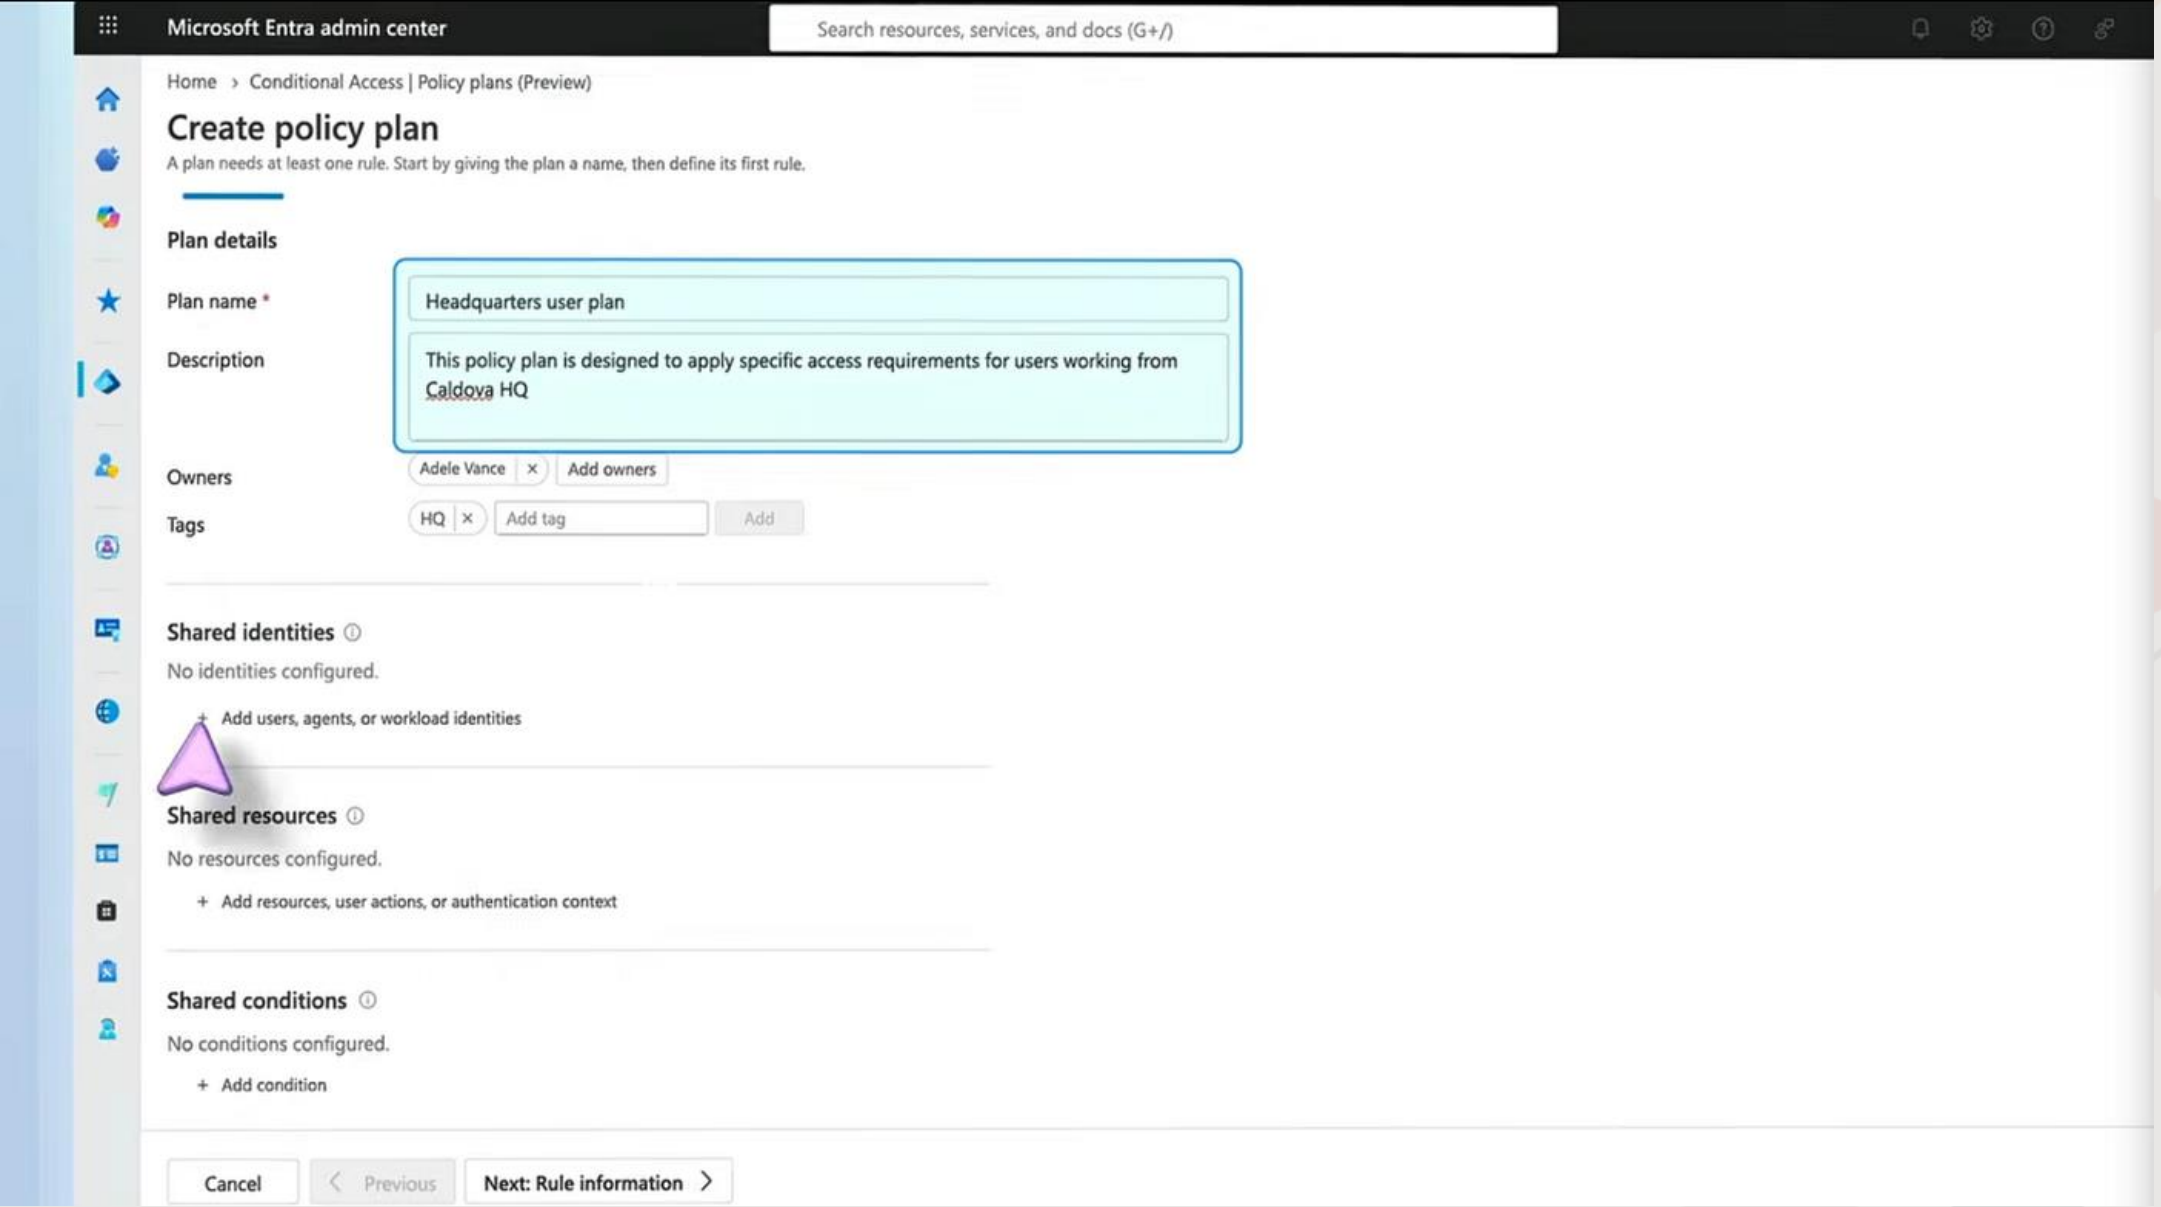

RULE 1
Windows
Compliant device

RULE 2
macOS
Compliant device

RULE 3
Mobile
App protection

Plan-level exclusions apply to every rule and cannot be overridden.

Microsoft Entra Conditional Access Policy Plans

PUBLIC PREVIEW

Built-in migration assistant — consolidate gradually and validate before enforcement.

01

Select

Entra ID → Conditional Access → Policies; choose Migrate to Policy Plans.

02

Merge & review

Select related policies; review common conditions and the proposed rules.

03

Test

Create the plan. New rules start Off; move them to Report-only.

04

Cut over

Compare sign-in results, enable rules, then disable original policies.

GENERAL AVAILABILITY

Entra Connect Sync → Cloud Sync: guided migration

Microsoft's wizard assesses readiness, transfers supported settings and switches the active sync engine.

01 Assess
Run readiness checks

02 Transfer
Create agent + configs

03 Test
Provision on Demand

04 Activate
Connect → staging

05 Validate
Objects + writeback

Guided migration: eligibility is limited

- One AD forest, up to 2,000 in-scope objects
- Up to 30 included OU containers / domain
- Custom rules, device sync and some writeback scenarios block the wizard

Before you retire Connect Sync

- Validate users, groups, memberships and writeback manually
- Keep Connect Sync installed for the two-week validation period
- Do not bypass readiness blockers

Microsoft Entra: new default for Agent Identity Blueprints

MC1506733 • Announced 13 Oct 2026 • Rollout starts 4 Nov 2026

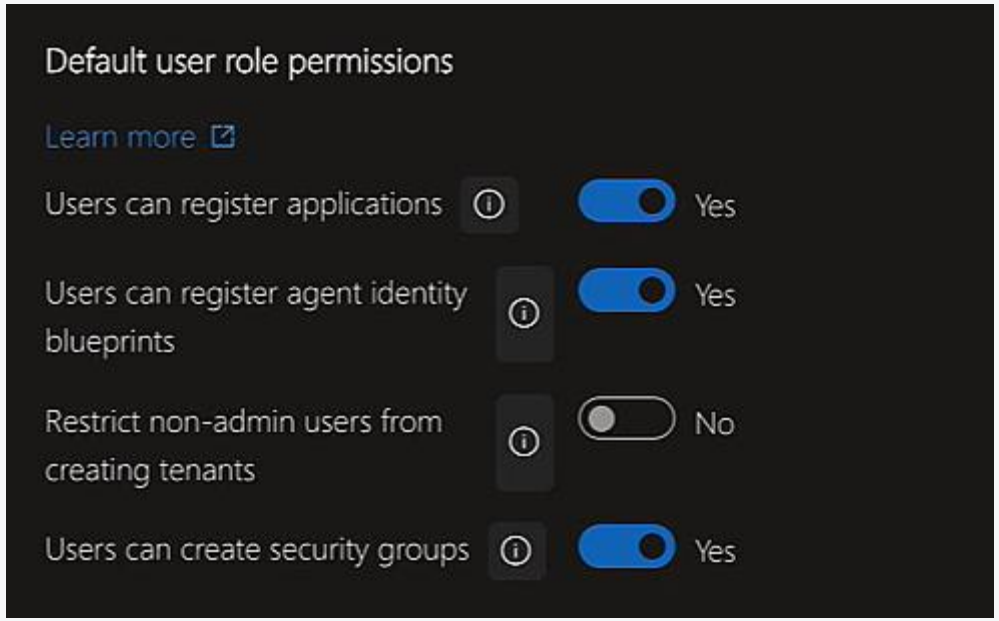

What is an agent identity blueprint?

An Entra identity definition used to create and manage AI agent identities.

One blueprint can underpin multiple agent identities, with shared configuration and governance.

It is NOT the AI agent itself, and creating one does not automatically grant access to company data.

NEW: standard users can create blueprints

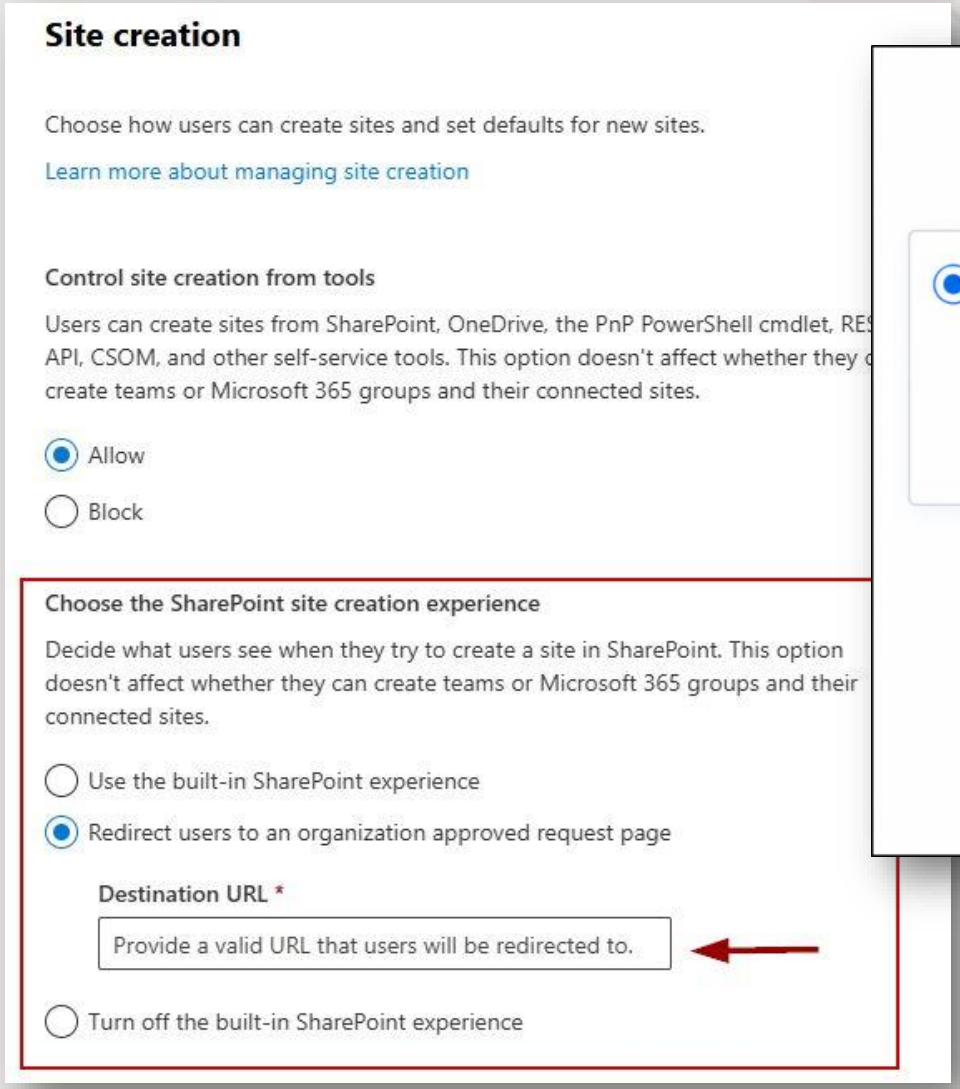

ADMIN ACTION Entra ID → Users → User settings → Set “Users can register agent identity blueprints” to No if creation should be restricted.

Refine the CA rules for Teams phone logon

Microsoft Teams

MESSAGE ID: MC1478962 | Plan for Change

Review Conditional Access policies to prevent sign-in issues on Teams Android devices

To strengthen platform security, access to some resources may be subject to stricter Conditional Access policy evaluation, which may cause sign-in issues on Teams Android devices.

What's changing?

Teams Android devices may experience sign-in issues if required resources are blocked by Conditional Access policies.

This applies to app version 1449/1.0.96.2026249711 and is targeted to complete by mid-October 2026.

Who is affected?

- Organizations that use Teams Android devices and have resource-specific Conditional Access policies configured.
- Administrators managing Microsoft Entra Conditional Access policies for Teams Android devices.

Affected platforms and services

- Microsoft Entra Conditional Access
- Microsoft Teams
- Teams Rooms on Android
- Teams phones
- Teams displays
- Teams panels

Recommended action (if applicable)

If you have resource-specific Conditional Access policies and are experiencing sign-in issues:

1. Ensure the following commonly blocked resources are included in the exclusion list:
   - Microsoft 365 App Catalog Services (e8be65d6-d430-4289-a665-51bf2a194bda)
   - Marketplace Extensions Runtime (08ff1ce2-4973-4b08-86a3-ebed13badc7f)
   - Office Voice Front Door (446f6ff1-f129-4dd2-930e-c5c620fb4121)
2. Review the interactive and non-interactive Microsoft Entra sign-in logs for the affected room resource account to identify any blocked sign-ins.
3. Confirm the blocked resource and applicable Conditional Access policy in the sign-in logs before making changes.

Good to know

- No action may be required if your tenant has not configured resource-specific Conditional Access policies for Teams Android devices.
- No compliance considerations identified. Review as appropriate for your organization.

Rollout timeline

Began: Late September 2026
Expected to complete: Mid-October 2026
(General Availability – Worldwide and GCC)

Change of the sender address for VoiceMail notifications

Microsoft Teams: Upcoming change to voicemail message delivery by email

Archive Share Copy link Mark as unread

Summary

Microsoft Teams will change voicemail email delivery by early March 2027, moving caller info from the email From field to the Subject line and allowing organizations to use their own domains for sending. Organizations should update mail-flow rules accordingly; no new compliance requirements arise.

Is this summary helpful?

What and why

We're changing how Microsoft Teams voicemail messages are delivered by email to improve security and give organizations more control over sender identity. Organizations will be able to send voicemail notifications from their own domain and apply existing SPF, DKIM, DMARC, and domain-protection policies to help prevent spoofing and impersonation.

Supporting organization-owned sending domains requires a new voicemail email delivery solution. Caller information will move from the email **From** field to the **Subject** line and remain in the message body.

Rollout schedule

- **General Availability (Worldwide):** Rollout is currently estimated to begin in **early March 2027** and complete by **late June 2027**.
  - Note: This schedule is subject to change. We will publish an updated Message center communication with the confirmed rollout timeline and required customer actions.

Microsoft Teams: Upgraded call history in Teams Calls app

Microsoft Teams: Upgraded call history in Teams Calls app

ROLLING OUT

ROLLOUT START
November 2026

Microsoft Teams

Call history in the Teams Calls app is being upgraded to make it easier to find and act on past call activity. Missed calls and associated voicemails will be consolidated into a single call history entry, reducing clutter and simplifying follow-up. Call history will also expand from 100 records to up to 3,000 records or 6 months of history, whichever limit is reached first, giving users more context when they need it.

Organize important resources in chats and channels

Microsoft Teams: Organize important resources in chats and channels

ROLLING OUT

ROLLOUT START
October 2026

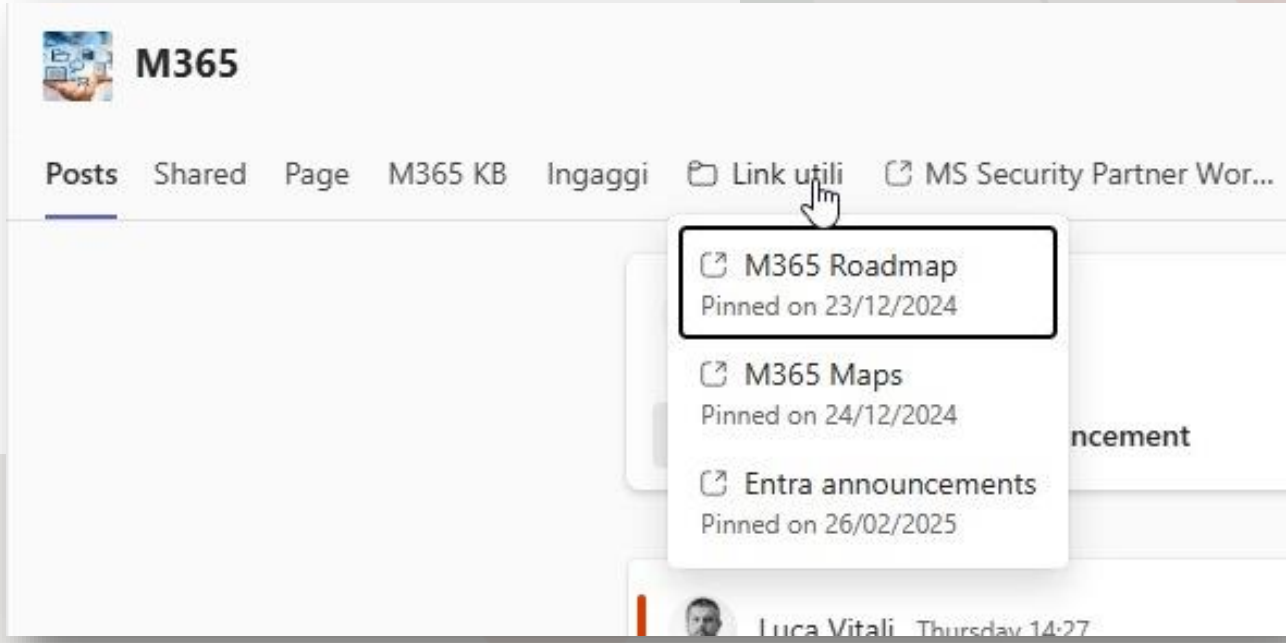

Microsoft Teams

Microsoft Teams is introducing a new way to organize and access important resources in chats and channels. Users will be able to pin key content, including links, files, and messages, directly beneath the chat or channel header for quick access. Resources can also be organized into folders, making it easier to keep important information visible and discoverable in active conversations. This update provides a more consistent experience across chats and channels, helping users stay organized, quickly find key resources, and remain aligned on important information. Existing pinned messages will continue to be available within the new experience, alongside other shared resources, on Teams desktop and web.

MC1519843 - New Outlook for Windows: All Accounts view brings email into a single inbox view

PUBLIC PREVIEW

The All Accounts view, also known as Unified Inbox, lets users see email from multiple connected accounts in a single inbox view in the new Outlook for Windows without merging their mailboxes. Each account's inbox stays separate, and All Accounts view brings messages together so users can triage mail from one place.

Users can read, delete, search, move, archive, and mark messages across accounts without switching between mailboxes. The experience integrates with Copilot for AI-assisted email workflows and supports Search with Copilot for finding messages across the user's primary account.
