Identity Secure Score recommendations in GA

There are a total of 12 recommendations:

- Protect your tenant with Insider Risk condition in Conditional Access policy
- Protect all users with a user risk policy
- Protect all users with a sign-in risk policy
- Enable self-service password reset
- Use least privileged administrative roles
- Designate more than one global admin
- Enable password hash sync if hybrid
- Do not expire passwords
- Ensure all users can complete multifactor authentication
- Do not allow users to grant consent to unreliable applications
- Enable policy to block legacy authentication
- Require multifactor authentication for administrative roles

Note that the Identity Secure Score refreshes every 24 hours.

Org Explorer

Your Microsoft 365 subscription is being updated with a new service in your Outlook: Org Explorer.

This organization chart helps you visualize your company's internal structure and discover connections, roles, and responsibilities among you and other people across teams.

After the rollout, Org Explorer will not require a Viva premium license.

Microsoft deprecated the MSOnline & Azure AD PowerShell modules in March 2024, stating they'd remain functional until March 2025.

Now, the official retirement timeline and planned temporary outages are here:

MSOnline PowerShell: Retirement starts between April and May 2025

Azure AD PowerShell: Retirement begins after July 1, 2025

Temporary Outages: MSOnline PowerShell will experience outages starting January 20, 2025

Action required: MSOnline and AzureAD PowerShell retirement - 2025 info and resources

Retirement of MSOnline PowerShell begins in April 2025. Learn about the timeline and required actions.

As announced in Microsoft Entra [change announcements](#) and prior [blog](#) updates, the MSOnline and Microsoft AzureAD PowerShell modules were deprecated on March 30, 2024. The retirement for MSOnline PowerShell module starts in early April 2025 and ends in late May 2025. You must take action to avoid impact after this date by migrating any use of MSOnline to [Microsoft Graph PowerShell SDK](#) or [Microsoft Entra PowerShell](#), which is currently in preview.

Timeline summary

Module	End of support	Temporary outage tests	Retirement
MSOnline	March 30, 2025	Between January 20, 2025 and March 30, 2025	Early Apr 2025 to late May 2025
AzureAD	March 30, 2025	N/A	After July 1, 2025

admindroid.com

SharePoint Spaces Retirements

SharePoint spaces is planned for deprecation starting in March 2025 with removal of support completing in August 2025.

Microsoft Mesh offers many of the same tools for authoring 3D Environments and includes the ability to have multiple people join events at the same time, be represented as avatars, and communicate with each other with spatialized audio.

We recommend exploring Mesh for your future Immersive 3D Experience needs.

Majorana 1

Microsoft has unveiled Majorana 1, the world's first quantum chip utilizing a Topological Core architecture.

This innovation employs topoconductors—a novel class of materials capable of observing and controlling Majorana particles—to create more reliable and scalable qubits, the fundamental units of quantum computing.

This advancement is expected to enable quantum computers to address complex, industrial-scale problems within years rather than decades

A **Qubit** (short for **quantum bit**) is the fundamental unit of information in quantum computing. It is the quantum equivalent of a classical bit (which is either **0 or 1**), but with unique properties that give quantum computers their power.

More Stable Qubits

- Traditional qubits (e.g., superconducting or trapped ions) are **highly unstable**, requiring **massive error correction**.
- **Topological qubits** use **Majorana particles** (exotic quantum states) to **store quantum information in a way that is inherently more robust**.
- This **reduces error rates**, making computations **more reliable and scalable**.

Novel Materials - Topoconductors

- Microsoft developed **topoconductors**, a new class of materials that enable the creation and control of **Majorana particles**.
- These materials allow **qubits to be more fault-tolerant**, making large-scale quantum computing more feasible.

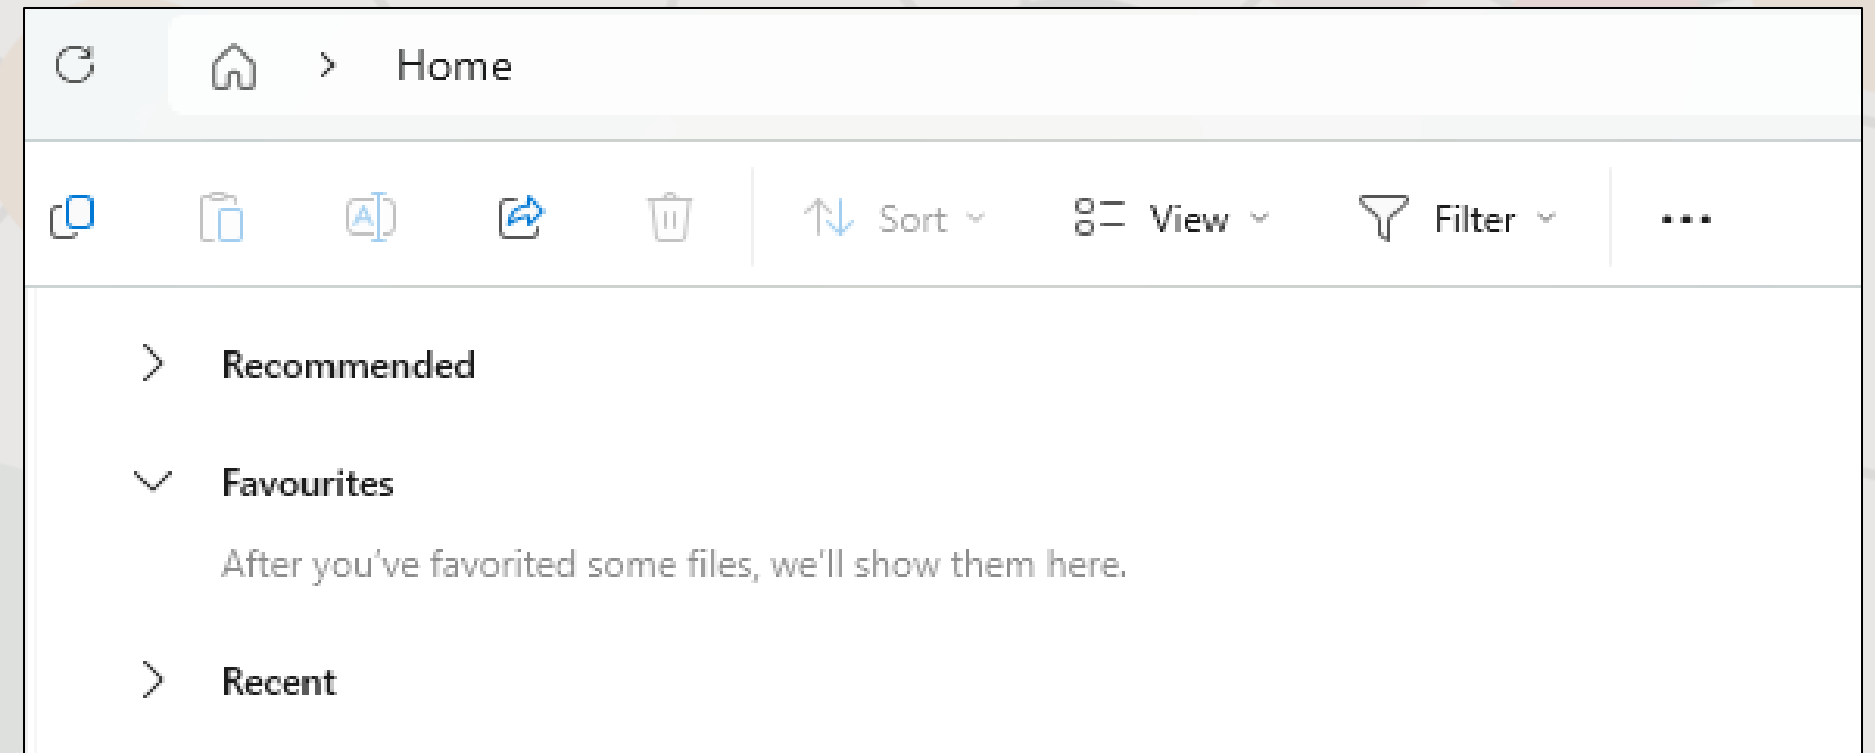

File Explorer "Decluttering" for EE and EU

Windows 11 24H2 Preview Build 26120.3281 is now available on the Dev and Beta channels

Recent, Favorites, and Recommended content, alongside the Details Pane, have been removed in File Explorer.

Microsoft made this move to comply with the EU's General Data Protection Regulation (GDPR) regulations, as these four features require account-based content.

Note that this move will only affect Entra ID (i.e., corporate) users in the European Economic Area.

Intune and Android MAC Randomization

- MAC address randomization: Use random MAC addresses when needed, such as for network access control (NAC) support. Users can change this setting.
- Your options:
 - Use device default: Intune doesn't change or update this setting. By default, when devices connect to a network, the devices present a randomized MAC address instead of the physical MAC address. Any updates made by the user to the setting persist.
 - Use randomized MAC: Enables MAC address randomization on devices. When devices connect to a new network, the devices present a randomized MAC address, instead of the physical MAC address. If the user changes this value on their device, it resets to Use randomized MAC on the next Intune sync.
 - Use device MAC: Forces devices to present their actual Wi-Fi MAC address instead of a random MAC address. With this setting, devices are tracked by their MAC address. Only use this value when necessary, such as for network access control (NAC) support. If the user changes this value on their device, it resets to Use device MAC on the next Intune sync.
- This feature applies to:
 - Android 13 and later

Windows Studio Effects

Windows Studio Effects utilizes AI on select Windows devices with compatible Neural Processing Units (NPUs) - Copilot+ PC - to apply special effects to the device camera (currently supports front-facing camera) or built-in microphone.

- Background Effects: Two supported models.
 - Standard Blur - a simple gaussian blur effect.
 - Portrait Blur - a subtle bokeh-style blur effect. Depending on device capability, it may be subtle, or a depth-based blur.
- Eye Contact: Two supported models.
 - Standard - subtle correction for a device user looking down from the camera to the screen. *Does not adjust the left or right movement of the eyes.
 - Teleprompter - more aggressive correction for a customer scanning their eyes all around the screen as they read teleprompter content.
- Automatic Framing: Detects a person in the camera field of view and crops/zooms to keep them framed.
- Portrait light: Improve the quality of lighting on the person in the video in a poorly lit environment, remove strong screen light reflection.
- Creative filters: Video filters to add some fun and flare.

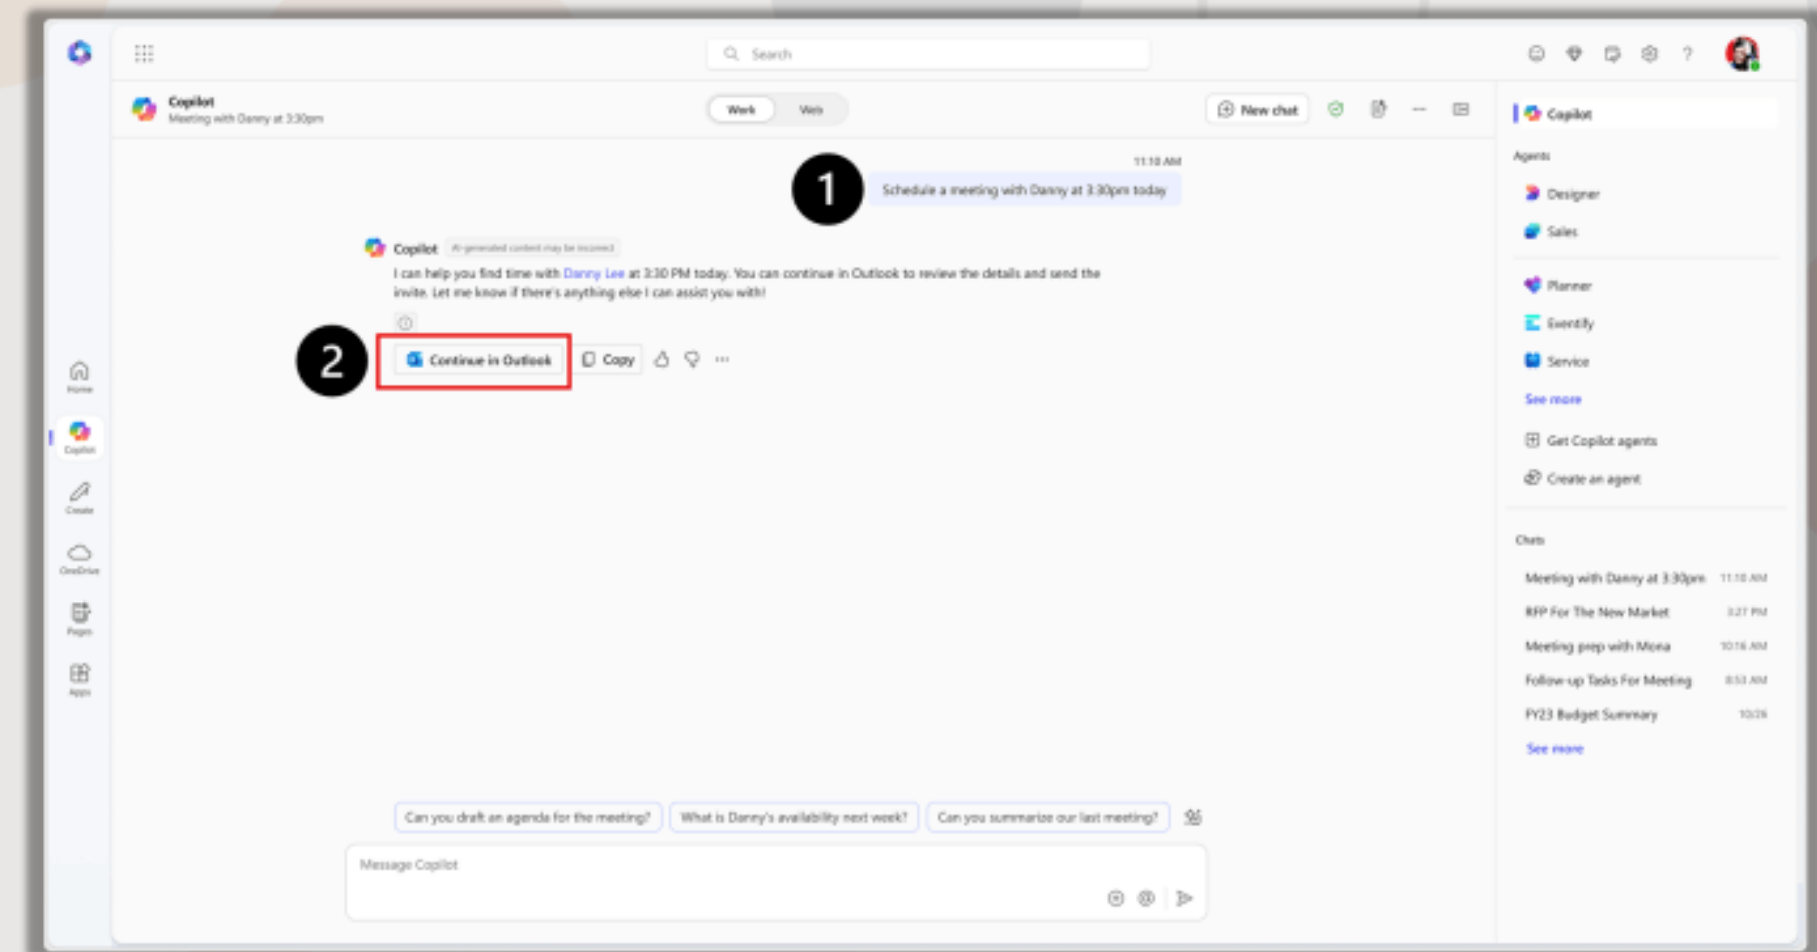

MC985481 – (Updated) Microsoft 365 Business Chat: Use “Continue to Outlook” to set up a meeting in Microsoft Outlook

Microsoft 365 Business Chat to offer a Continue to Outlook option in Chat to set up a meeting in Outlook.

Late February 2025.

As a Microsoft 365 Copilot Business Chat user, when you ask Copilot to help you schedule a meeting with someone (1), it will offer an option to Continue in Outlook to schedule the meeting (2).

Everyone can use Copilot agents in Microsoft Teams group chats

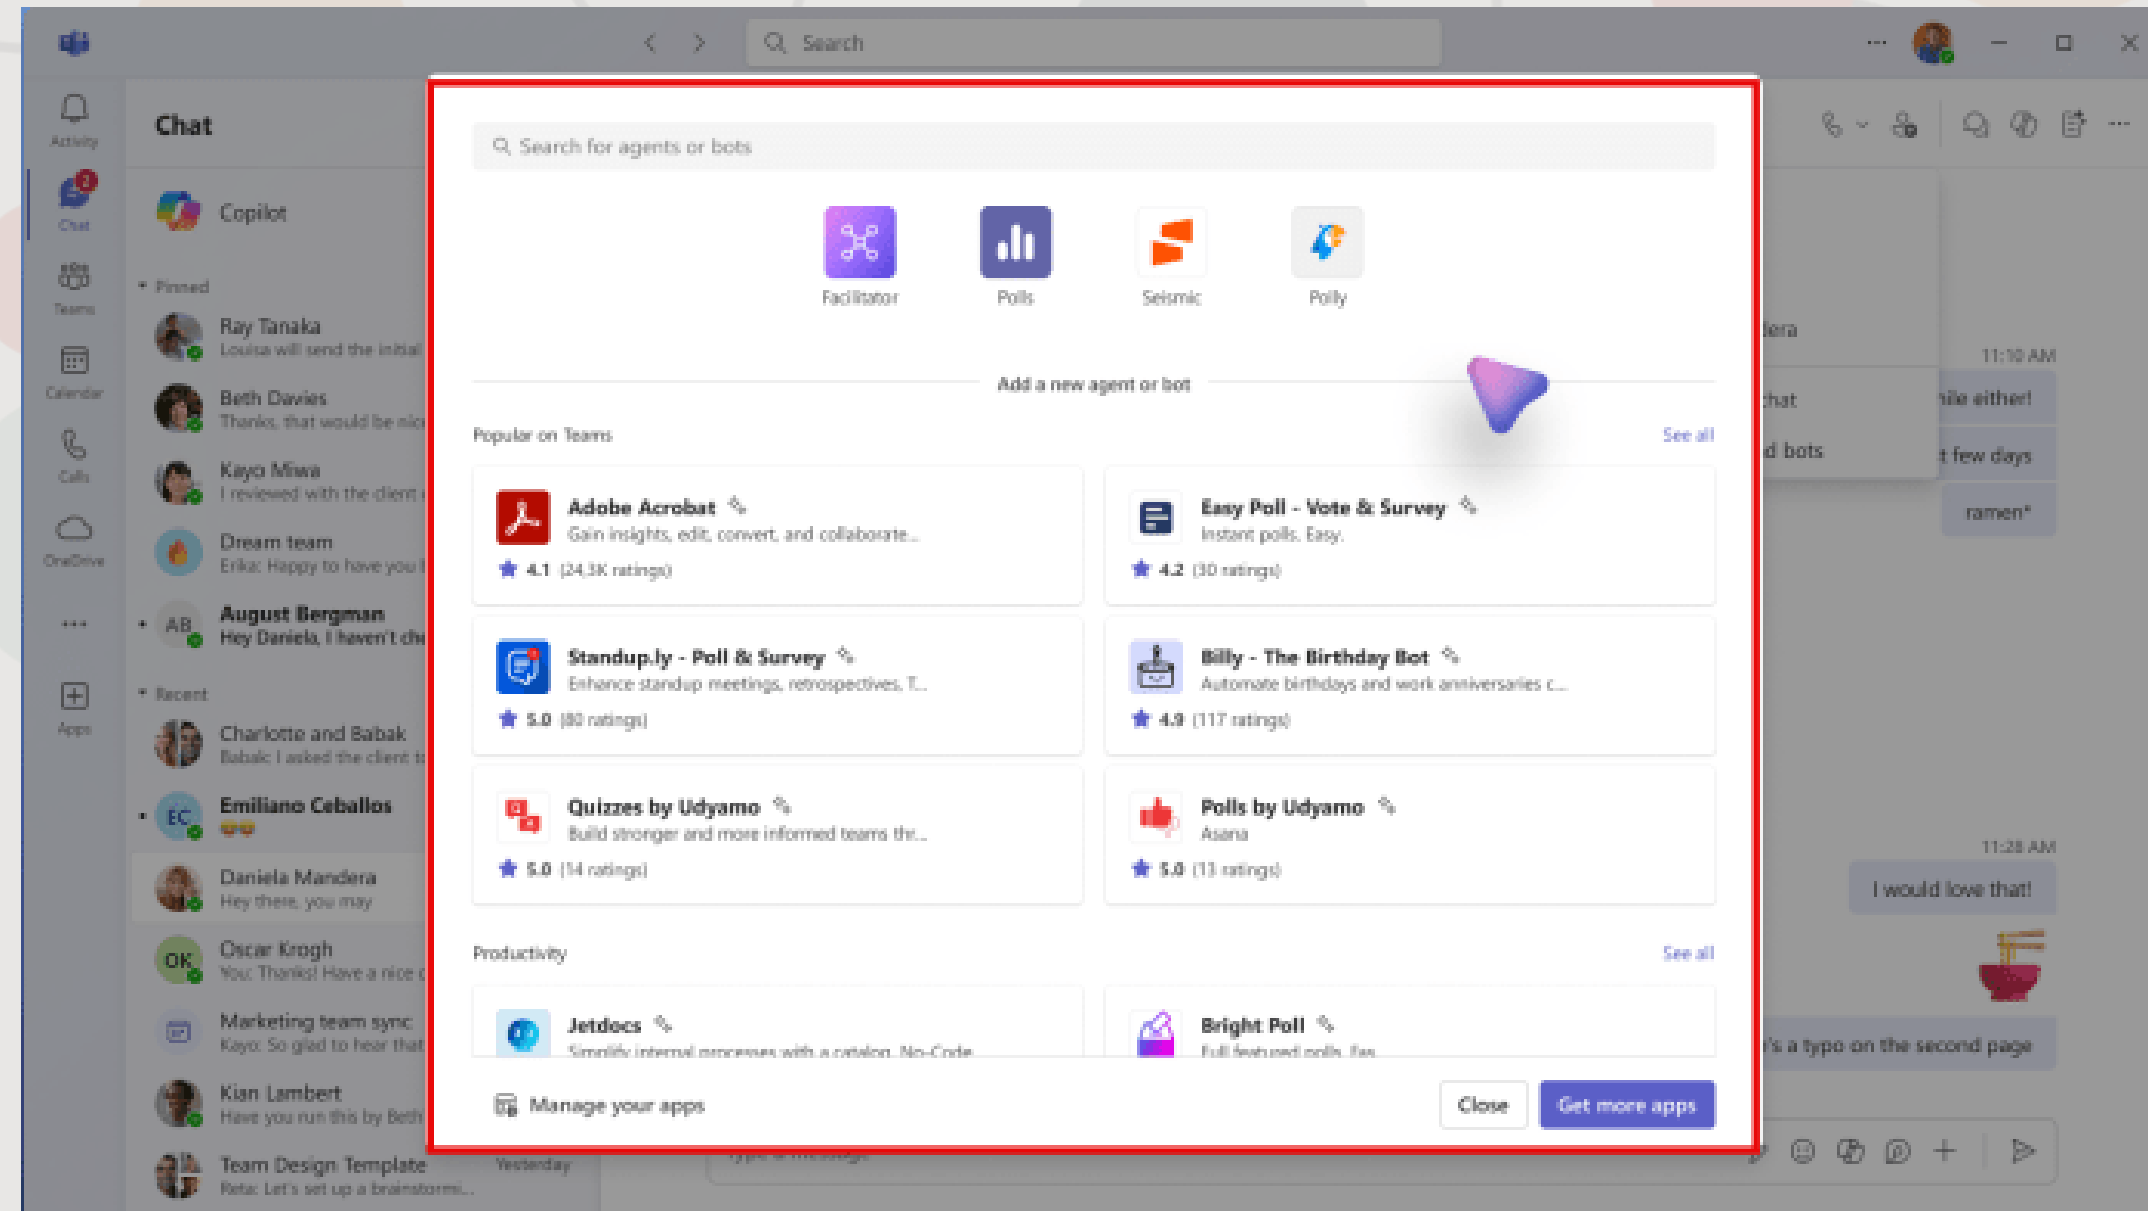

Microsoft Teams group chat members will soon be able to add and use Microsoft 365 Copilot agents in those group chats...even people who do not have a Copilot license unless your organisation block this.

Due early to early to mid-February 2025.

After this rollout, go to the updated group chat participants control and select Add agents and bots:

Add agents or bots opens a view of agents you can add to the group chat.

Previously installed agents that can be used in the group chat are shown first, followed by new agents that can be installed.

Microsoft Teams Facilitator agent coming March

Microsoft Teams Facilitator agent coming March (Microsoft 365 Copilot licence) - Shared and editable AI-generated notes in meetings and chats

In meetings, enable "AI generated notes" for Facilitator to take shared real-time notes during your meetings. Notes are organized by topics and follow-up tasks Under the Notes button.

In chats, Facilitator agent generates a summary of important information as the conversation happens, including key decisions, action items, and open questions to resolve.

Microsoft Teams: Facilitator agent notetaking in meetings and chats

Microsoft Teams

Microsoft Copilot (Microsoft 365)

The Facilitator agent takes real-time notes during your Teams meetings and chats, so you can catch up quickly. In meetings, it summarizes the conversation and identifies key decisions, action items, and questions to resolve.

Microsoft Teams client live mic active volume indicator

Updated February 24, 2025: We have updated the rollout timeline below. Thank you for your patience.

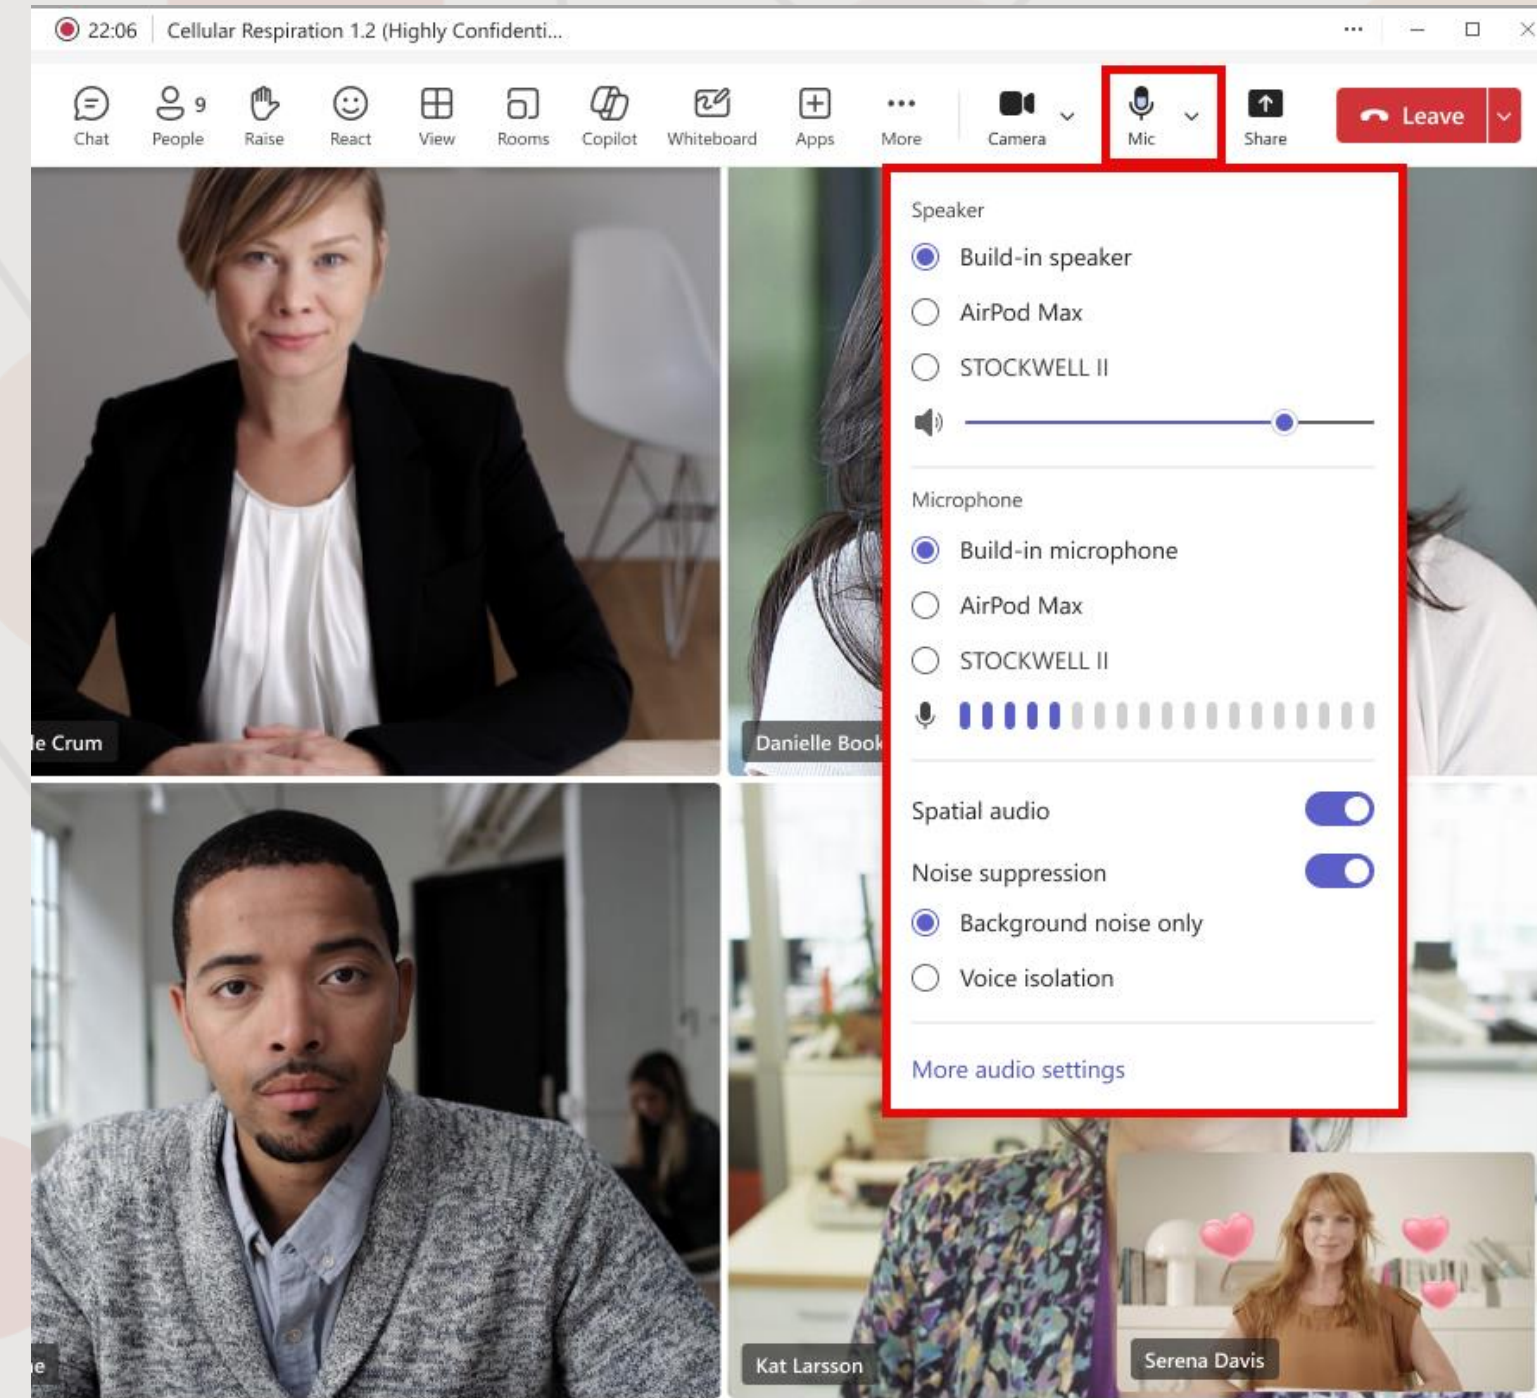

Coming soon for Microsoft Teams: A new Mic volume indicator on the user bar in Teams meetings. This feature will provide users with real-time visual feedback on their audio levels in the meeting, eliminating the need to ask, “Can you hear me?” This feature is designed to minimize interruptions as well as enhance user confidence and meeting effectiveness.

This feature applies to Teams on Windows desktop and Mac desktop.

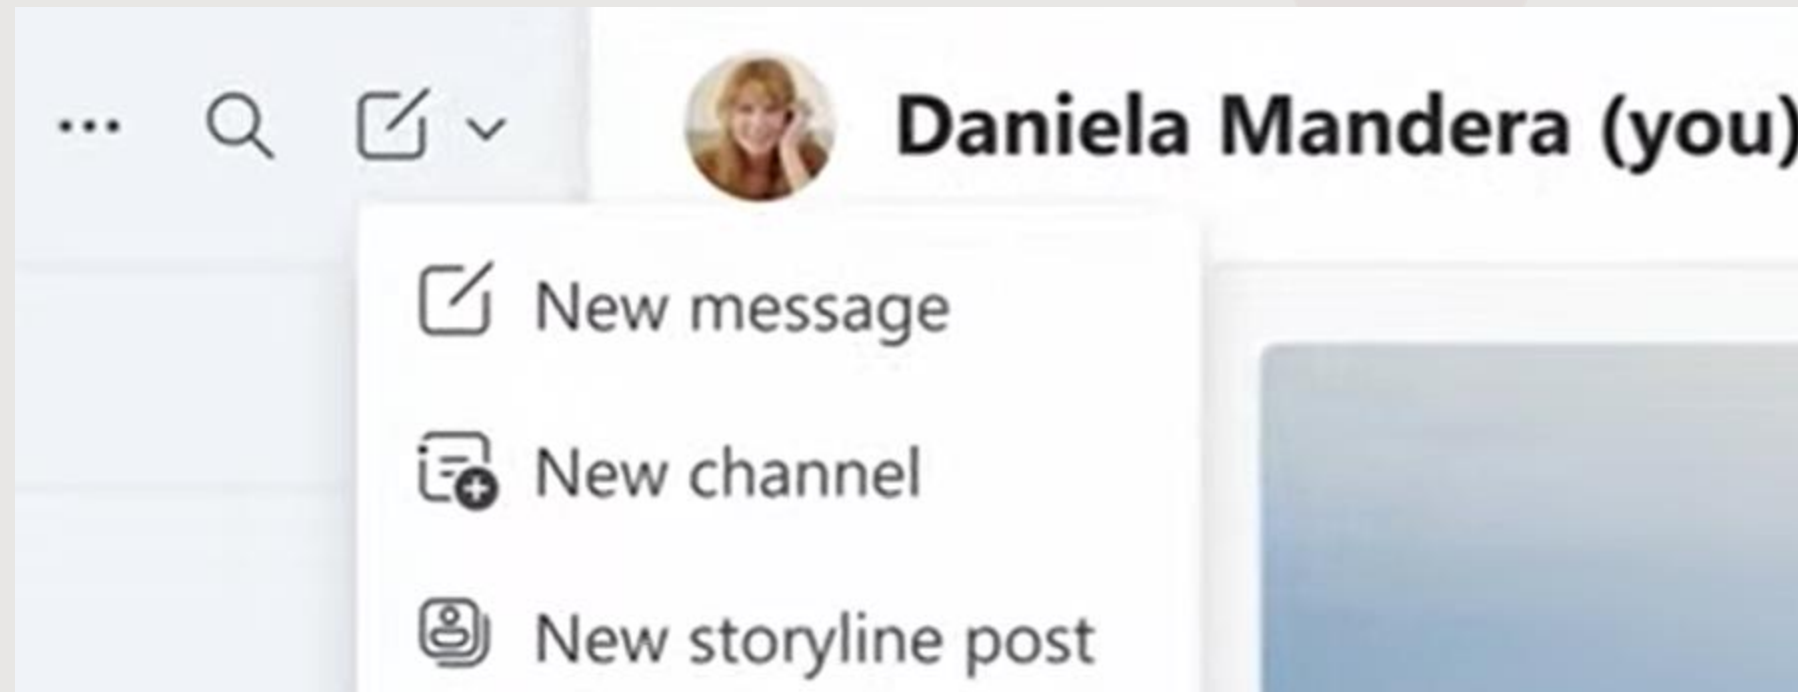

This message is associated with Microsoft 365 Roadmap ID 468274.

This feature will be available to users by default and has no admin policy.

Users can select the *Mic* icon and review the *Microphone* section of the menu to find out more about their audio levels in the meeting:

Storylines in Microsoft Teams

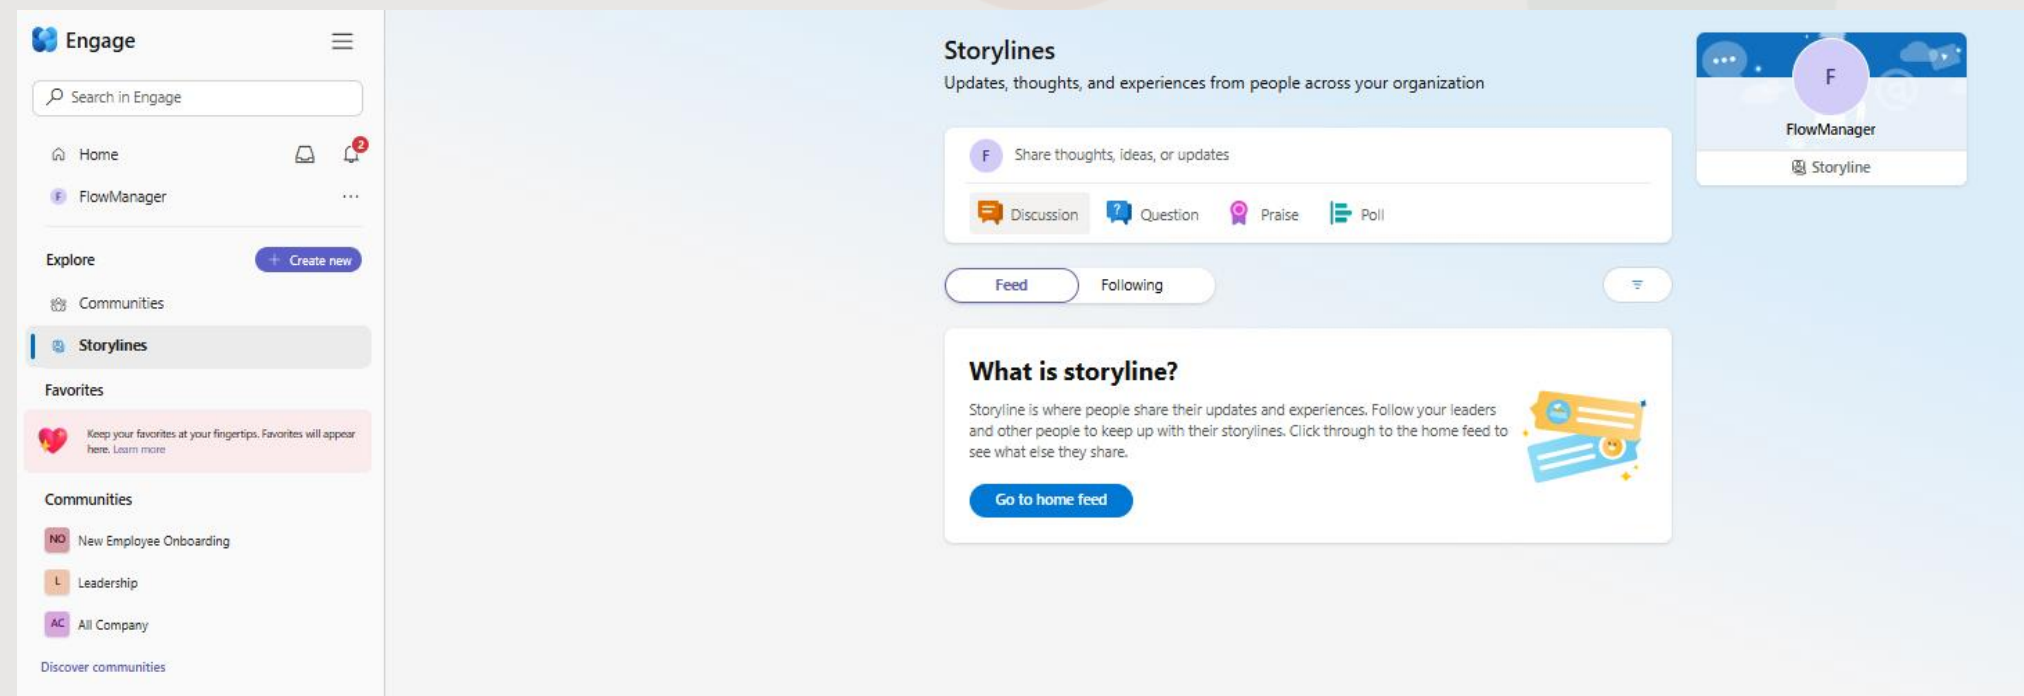

User experience of Viva Engage in Teams chats

The first Viva Engage experience to integrate with Teams chats is storyline.

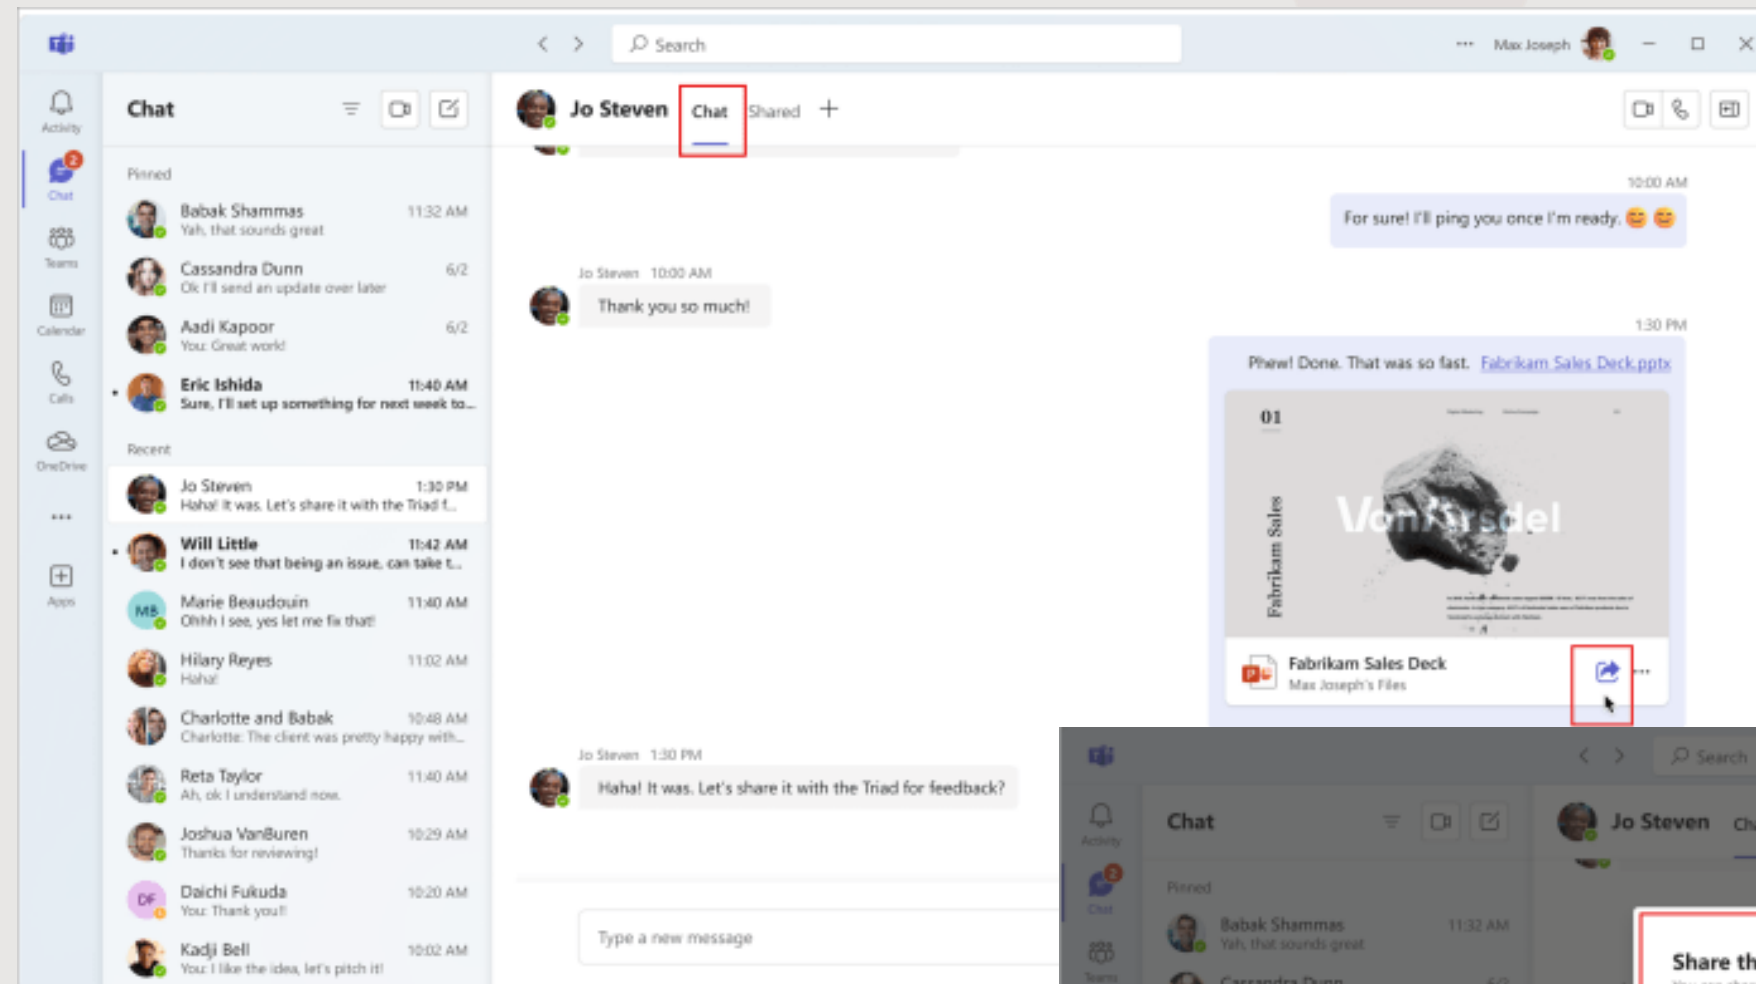

Storyline content, whether originating from Teams or from Engage, is visible to all eligible users in both Teams and Viva Engage.

Storyline pages can be accessed in Teams chats with the following capabilities:

- Users can create new storyline posts directly from Teams.
- Users can follow, view, and comment on others' storylines in Teams.
- Users receive notifications in Teams for relevant activity in storyline.
- Storyline conversations have a look and feel similar to other messaging experiences in Teams.

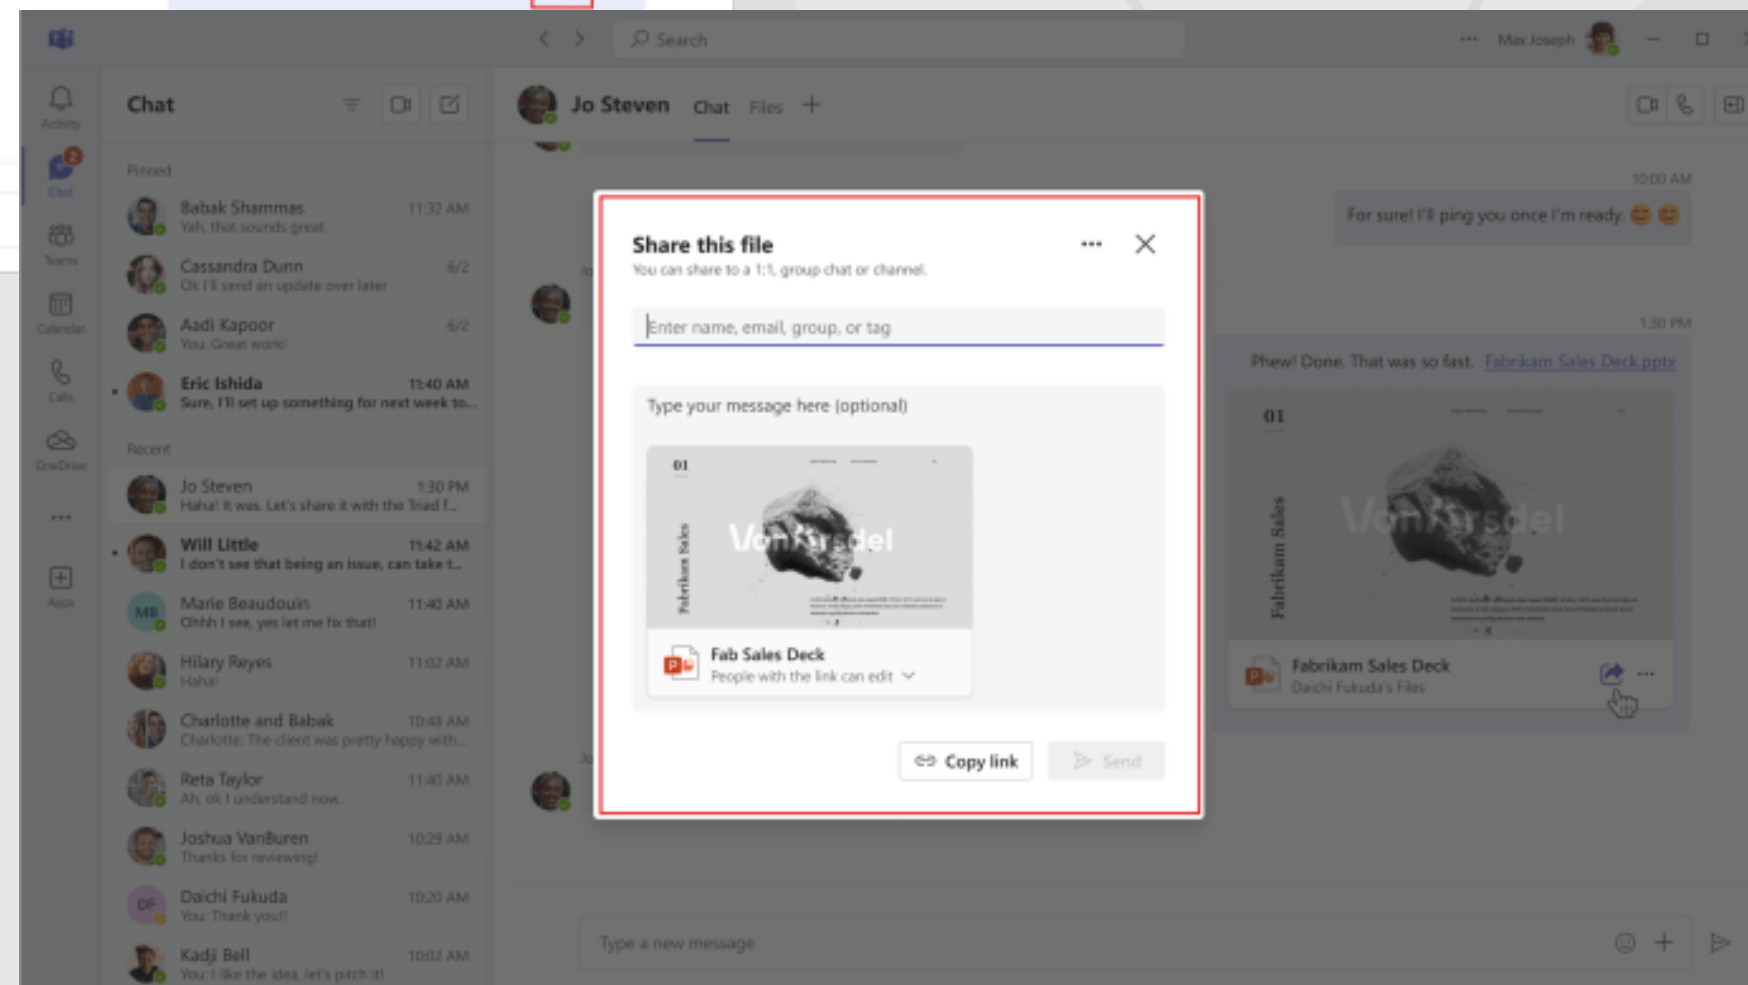

MC998511 - Microsoft Teams: Share files faster in Chat and channels

Microsoft is making it easier and quicker to share a file from a Chat conversation, a Chat Shared tab, or a channel post to 1:1 chats, group chats, or channels.

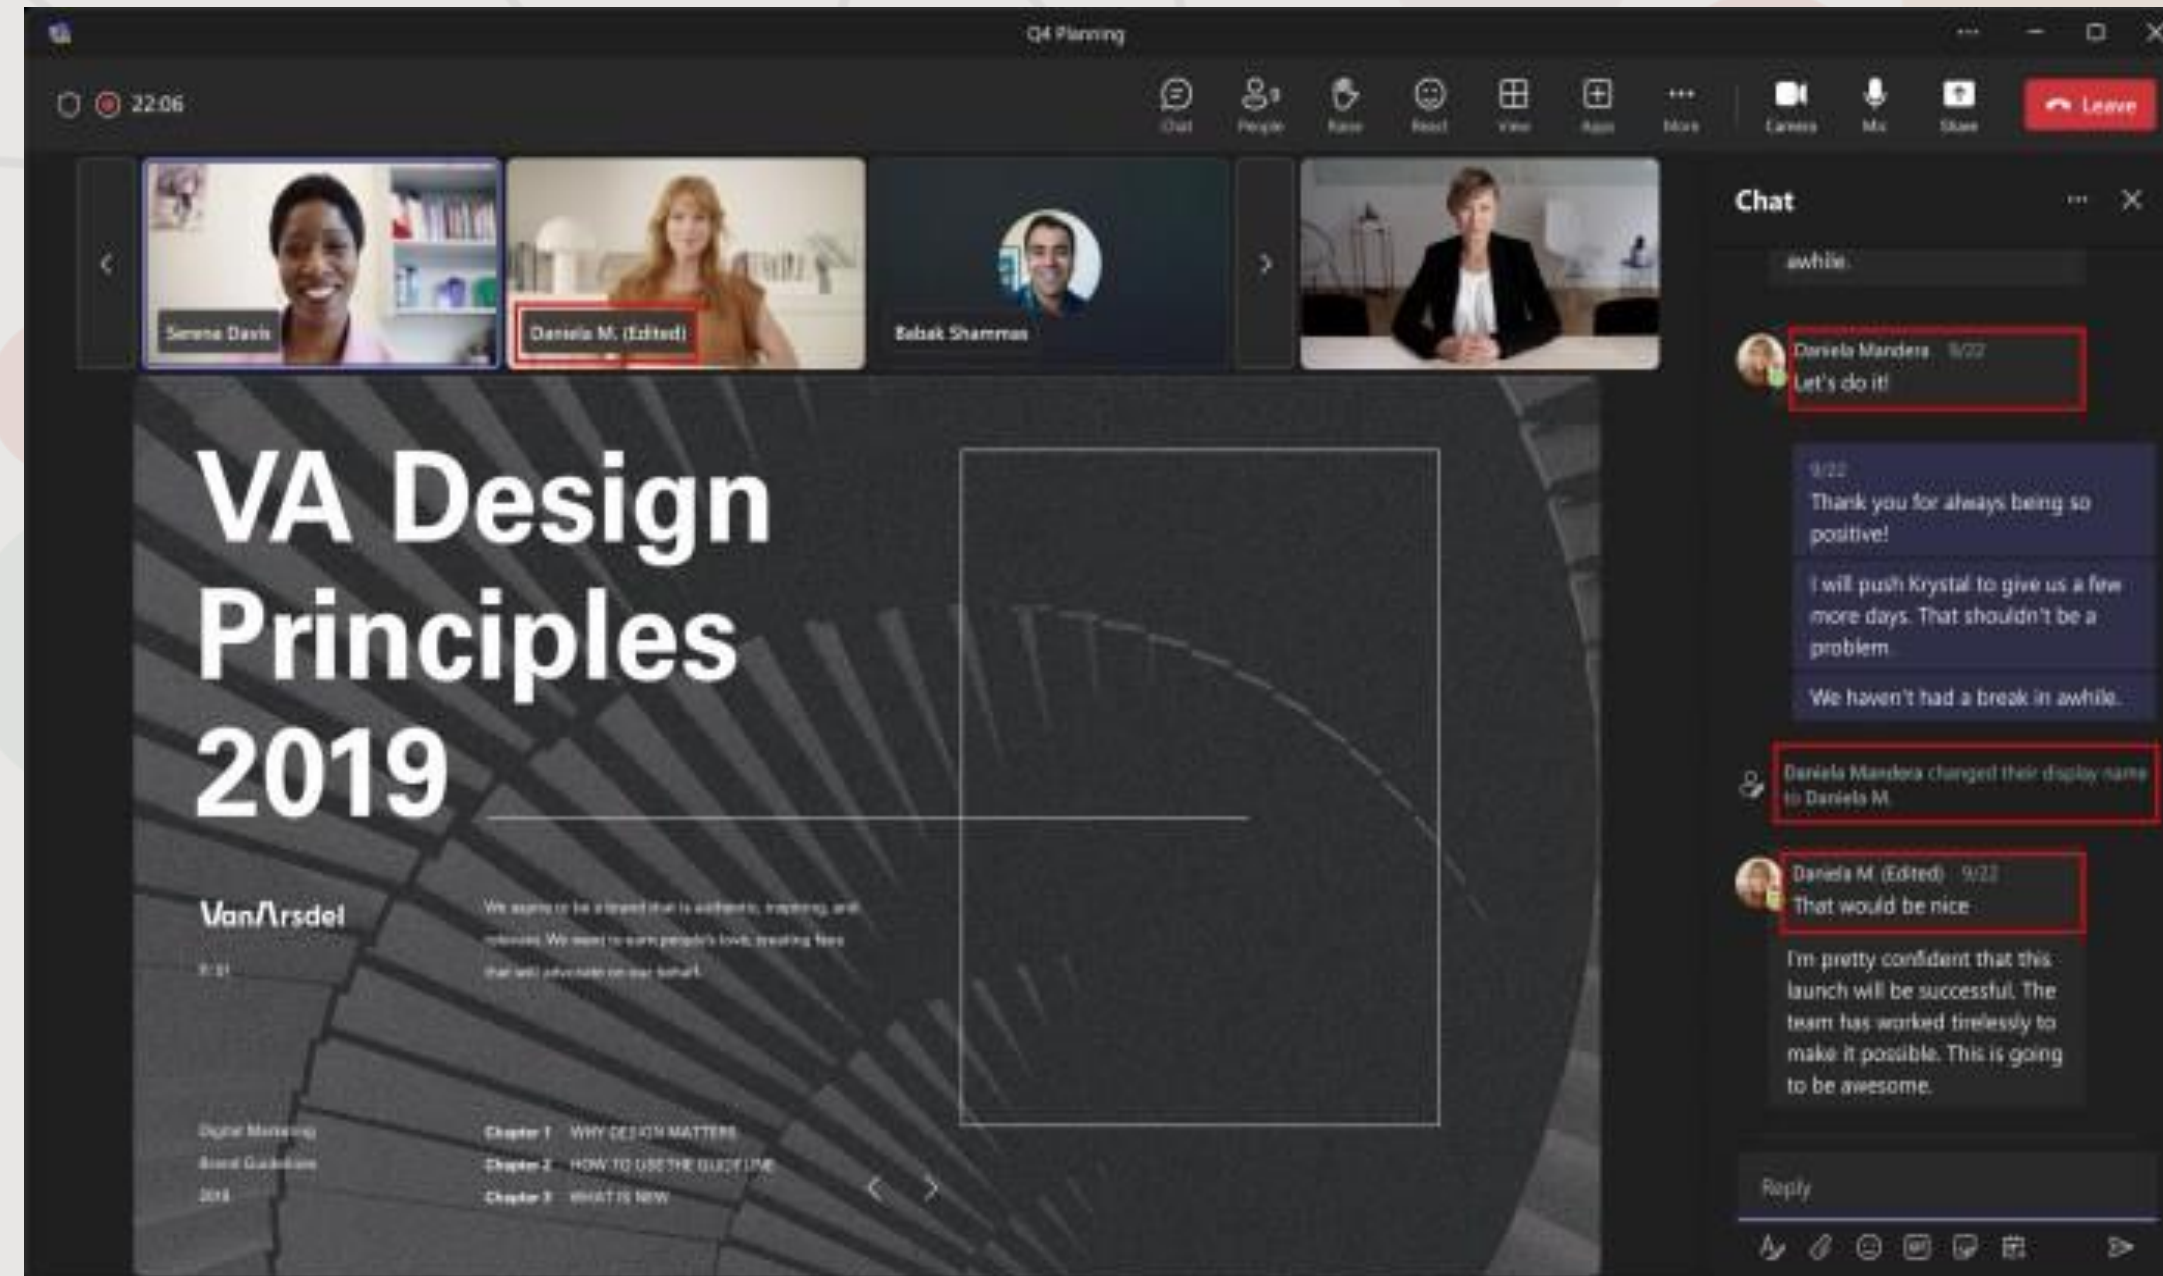

-> Mid-April to early May 2025.

- The file permissions are maintained when you share a file, but you can change them.

Edit your display name in Microsoft Teams meetings

- This name change is for the duration of the meeting only and does not affect your People card.
- This feature is off by default for all tenants. Admins can turn it on for everyone or select end users for their organisation.
- If turned on for the tenant, a meeting organiser must turn the feature on for the meeting in Meeting options > Let people edit their display name.
- Edited names will be identifiable by an 'edited' label next to them (see second image below).
- Meeting artefacts such as the attendee report will not show the name edit but the original name of the attendee.
- If turned on for your meeting, you can join the meeting and then select People at the top of the screen to edit your display names in the Participants panel:

MC998510 - Onboard to SIP Gateway Preview for early access to new features

Microsoft Teams SIP Gateway customers have the option of early access to production features through the SIP Gateway Preview environment in the APAC and EMEA regions.

When this will happen:

General Availability (Worldwide): Available now.

How this will affect your organization:

You can try out upcoming SIP Gateway feature set and firmware changes by provisioning test devices to the Preview environment. **NOTE:** The Preview environment can be unstable and less reliable than the production environment. We strongly discourage using the Preview environment for production workflows.

The Preview environment will be available by default for admins to opt into if desired.

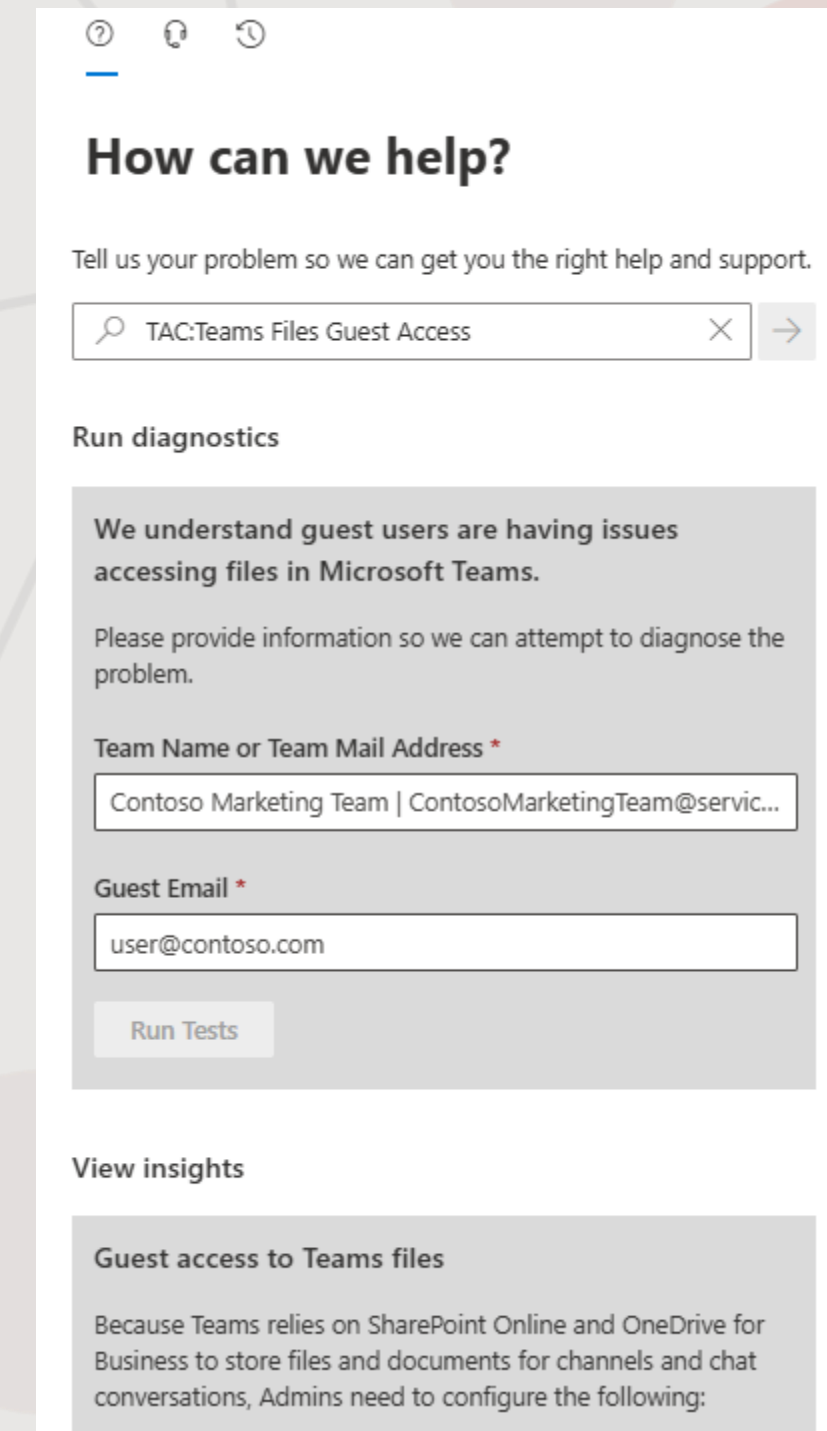

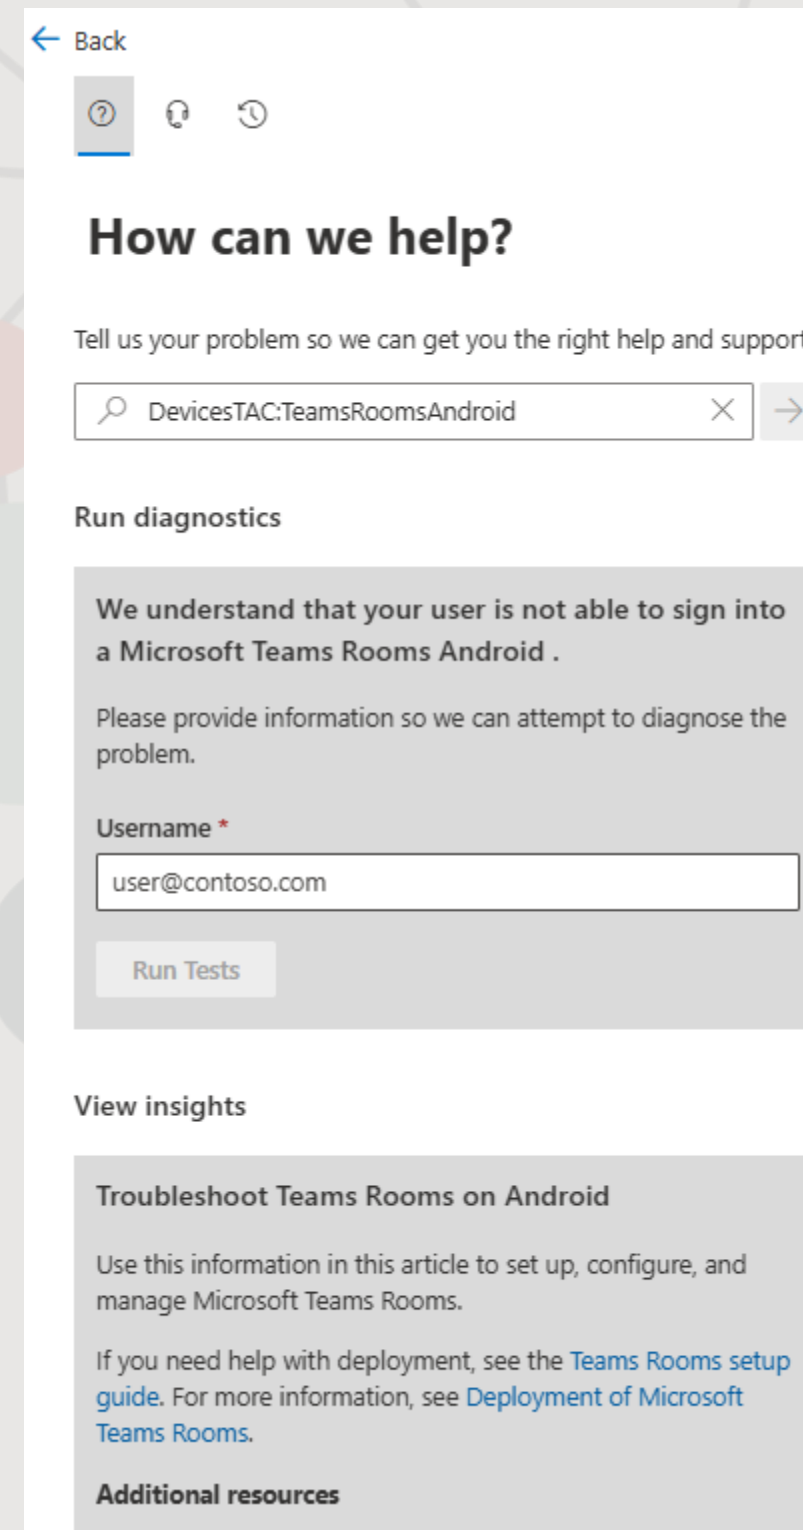

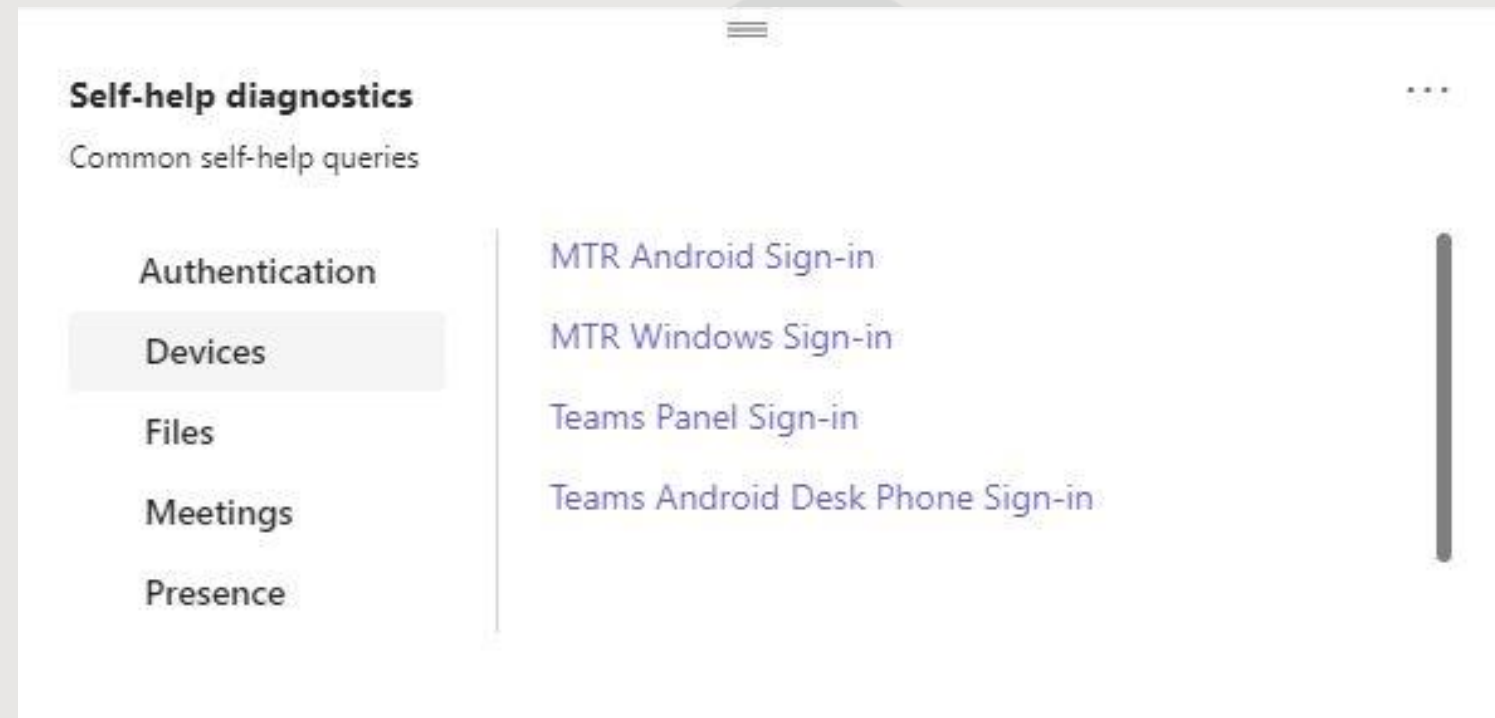

What you need to do to prepare:

Provision your devices to these SIP Gateway Preview regions:

- EMEA Preview Region: <http://emeadf.ipp.sdg.teams.microsoft.com>
- APAC Preview Region: <http://apacdf.ipp.sdg.teams.microsoft.com>

Self-Help Diagnostics are now available in Teams admin center Dashboard for Teams administrators!

MTRoW Multi-Camera

Prerequisites

Teams Rooms resource account with an assigned Microsoft Teams Rooms Pro license. For more information, see Microsoft Teams Rooms Licensing.

Teams Rooms on Windows version 5.2 or later installed.

Connect a maximum of four Teams certified single stream USB camera peripherals.

Multi-stream intelligent cameras aren't supported in multiple camera configuration. Multiple camera view isn't supported in Teams Events (live events, town hall).

Recommendations

- USB has limited bandwidth. Each camera should be connected to the Microsoft Teams Rooms device USB port directly. If there are insufficient USB ports for all peripheral devices, a USB hub can be used to but it should have only one camera connected to it.
- Older Microsoft Teams Rooms models might not have sufficient capacity to process multiple simultaneous videos. Video freeze or missing video streams might occur. Therefore, the following is our minimum compute recommendation:
 - Intel Core i5 processor or above
 - For two or three camera setup, minimum Intel 9th Generation CPU
 - For four camera setup, minimum Intel 12th Generation CPU
 - Cameras should support MJPEG video format.

<https://learn.microsoft.com/en-us/microsoftteams/rooms/multicamera-view>

MTRoW Mult-Camera

Direct routing call troubleshooting with the new "SIP call flow" diagram tool

Summary

Microsoft Teams is introducing a "SIP call flow" diagram tool in the admin center for troubleshooting Direct Routing calls. This feature will be available in March 2025 and will allow admins to view detailed SIP data for calls. No action is required before rollout, but user notification and documentation updates are recommended.

NEW FEATURE

Speaker recognition and attribution will be available in more meeting spaces + speaker recognition and attribution for Microsoft Teams Rooms on Android

Microsoft Teams: Speaker recognition and attribution available in additional meeting spaces

Microsoft Teams

You can now take advantage of speaker recognition and transcript attribution, and AI capabilities in additional meeting spaces, from those equipped with a Teams Room to those relying on a user's PC in a bring your own device (BYOD) room. This feature identifies and attributes people in live transcripts, utilizing a unique voice profile for each participant enabling intelligent recaps and maximum value from Microsoft 365 Copilot in Teams meetings. Users can easily and securely enroll voices via Teams Settings. A Teams Premium license is required on the host desktop in a BYOD room.

Tenant External Recipient Rate Limits (TERRL)

⚠️ ATTENZIONE ⚠️ nuovi limiti di spedizione email ESTERNE dai tenant MS365.

➖ Da marzo 2025, a fianco dell'External Recipient Rate (ERR) delle mailbox (2000 email esterne al giorno), verrà introdotto gradualmente il Tenant External Recipient Rate Limit (TERRL)

🤖 In base al numero di licenze possedute potremo mandare un certo numero di email nella finestra scorrevole di 24 ore con la formula : **$500 * (\text{Purchased Email Licenses}^{0.7}) + 9500$**

➡ Per controllare, fin da subito, il numero di email che abbiamo a disposizione e quante ne stiamo usando, c'è il nuovo comando powershell: **Get-LimitsEnforcementStatus**

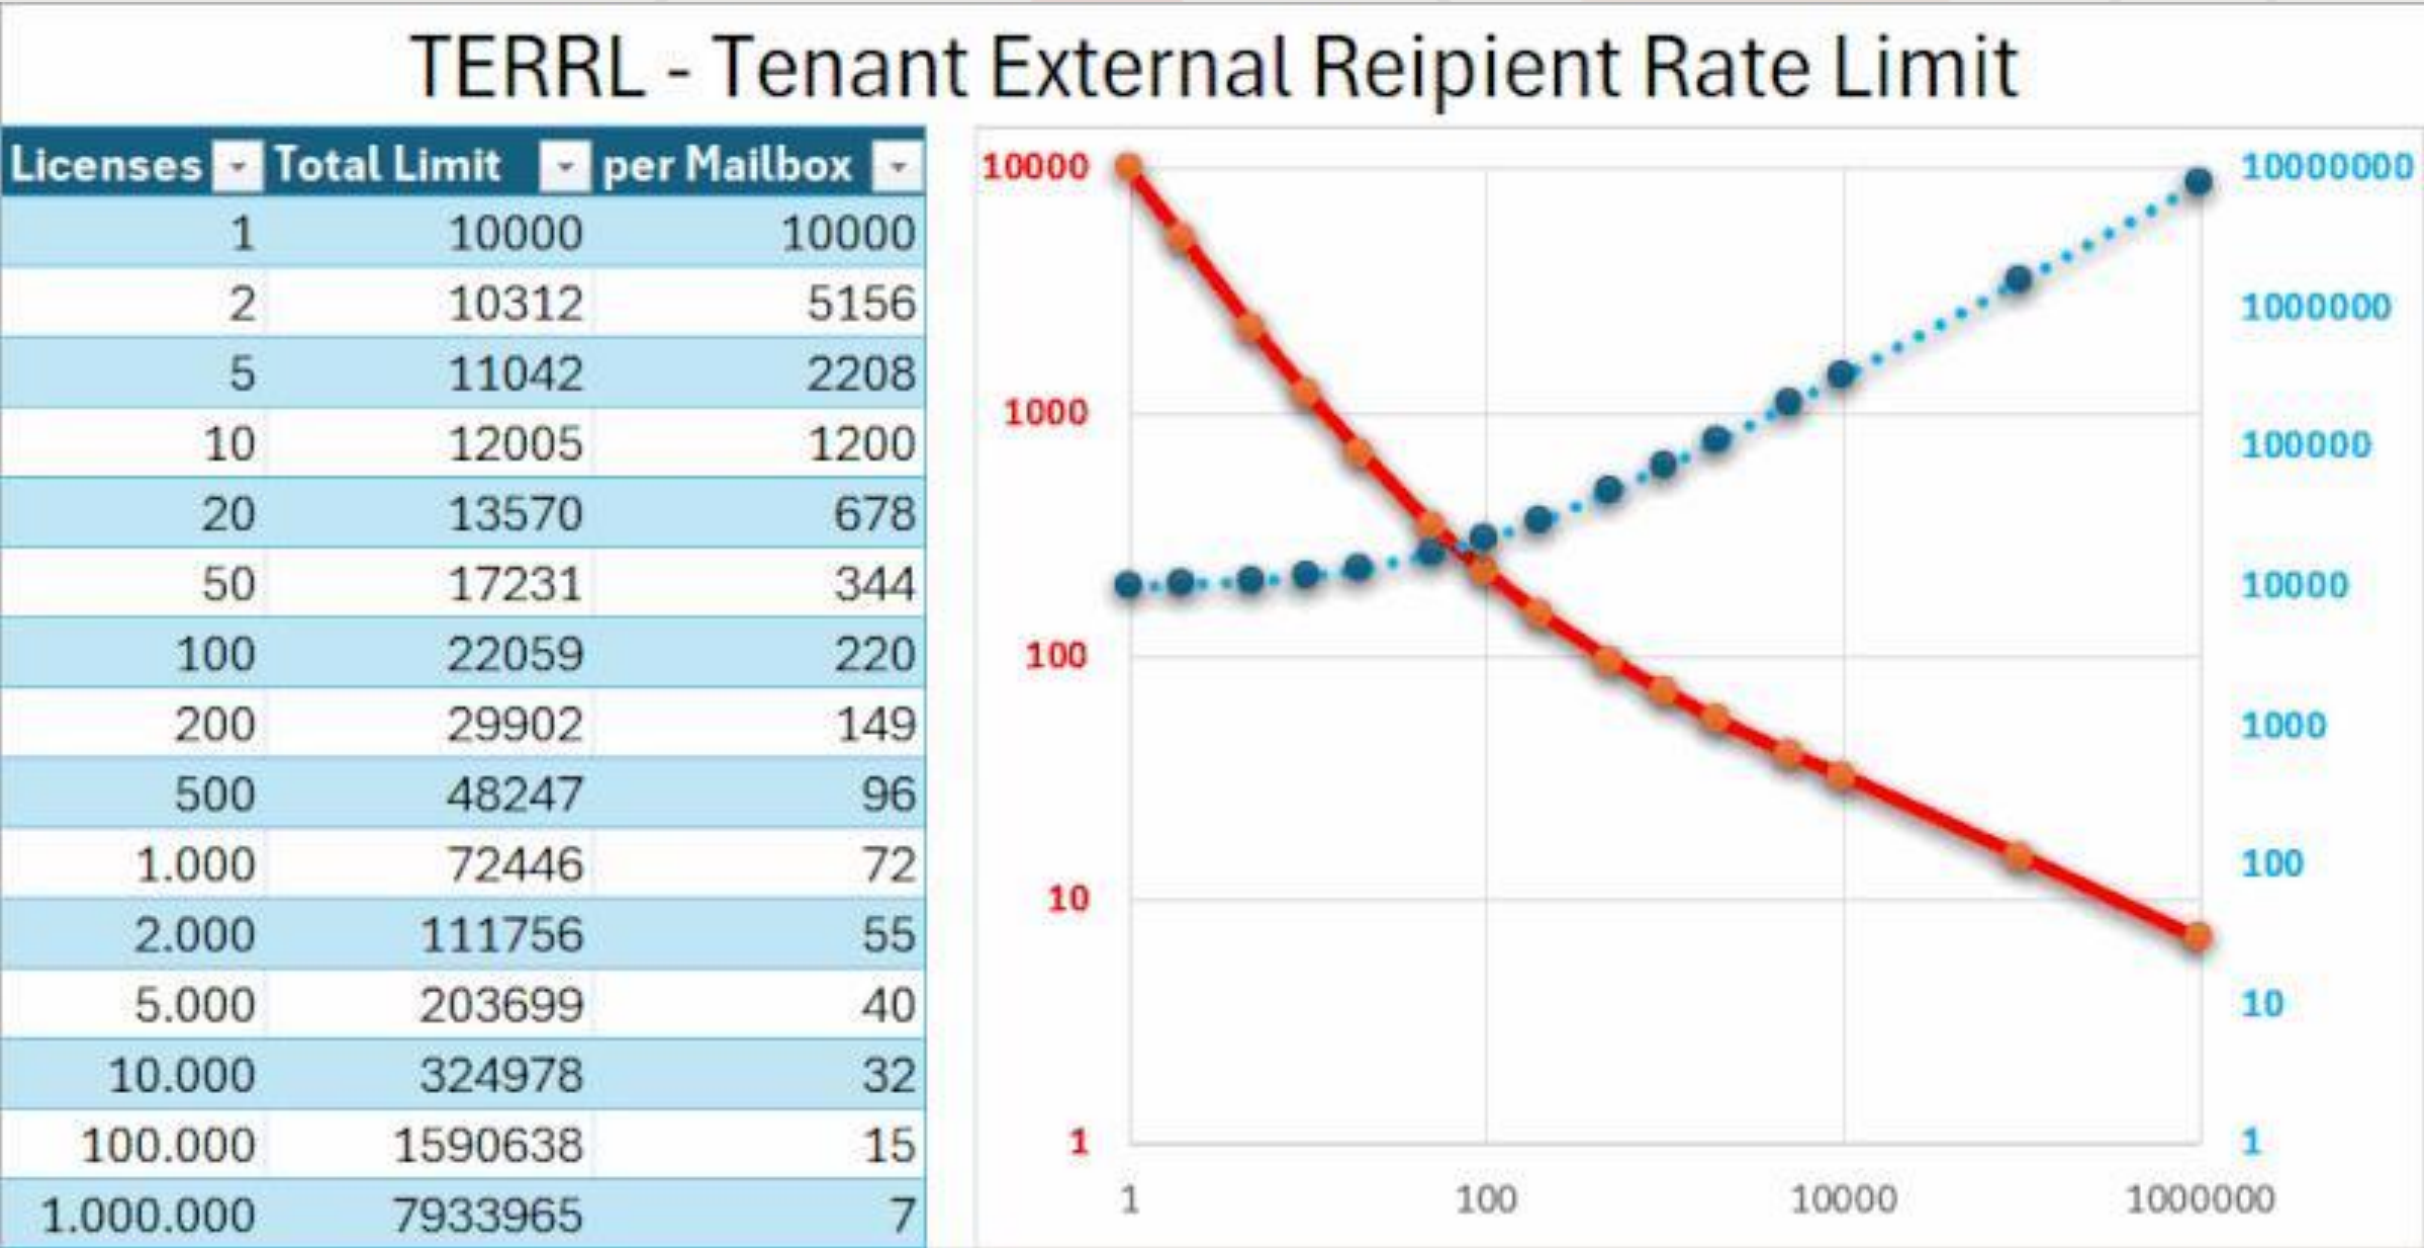

💡 Se stiamo superando il limite di invii esterni è necessario migrare le procedure applicative cambiando i flussi di posta ibridi o passando ad **Azure Communication Services** o virando su applicazioni di terze parti.

Tenant External Recipient Rate Limits (TERRL) - Esempi

Get-LimitsEnforcementStatus

EnforcementEnabled : False
Threshold : 241644
ObservedValue : 26683

L'ultima CU15 per Exchange 2019

- ➡ Nel codice è già la Subscription Edition, in uscita ad ottobre 2025.
- ➡ Nuova modalità di distribuzione degli aggiornamenti funzionali chiamata "Feature Flighting".
- ➡ Supporto al Windows Server 2025; terminati i test anche per il supporto dalla CU14.
- ➡ Nuovo DocParser per l'analisi del testo in transito al fine di migliorare prestazioni e funzionalità.
- ➡ Supporto al TLS 1.3 e ritorno, a grande richiesta, dell'interfaccia grafica per il rinnovo dei certificati.
- ⚠ Se c'è un Exchange 2013 NON si installa la CU15, usate la CU14 con WS2025 che sarà aggiornabile "inplace" alla versione SE.
