MDI: New Microsoft Entra Connect sensor

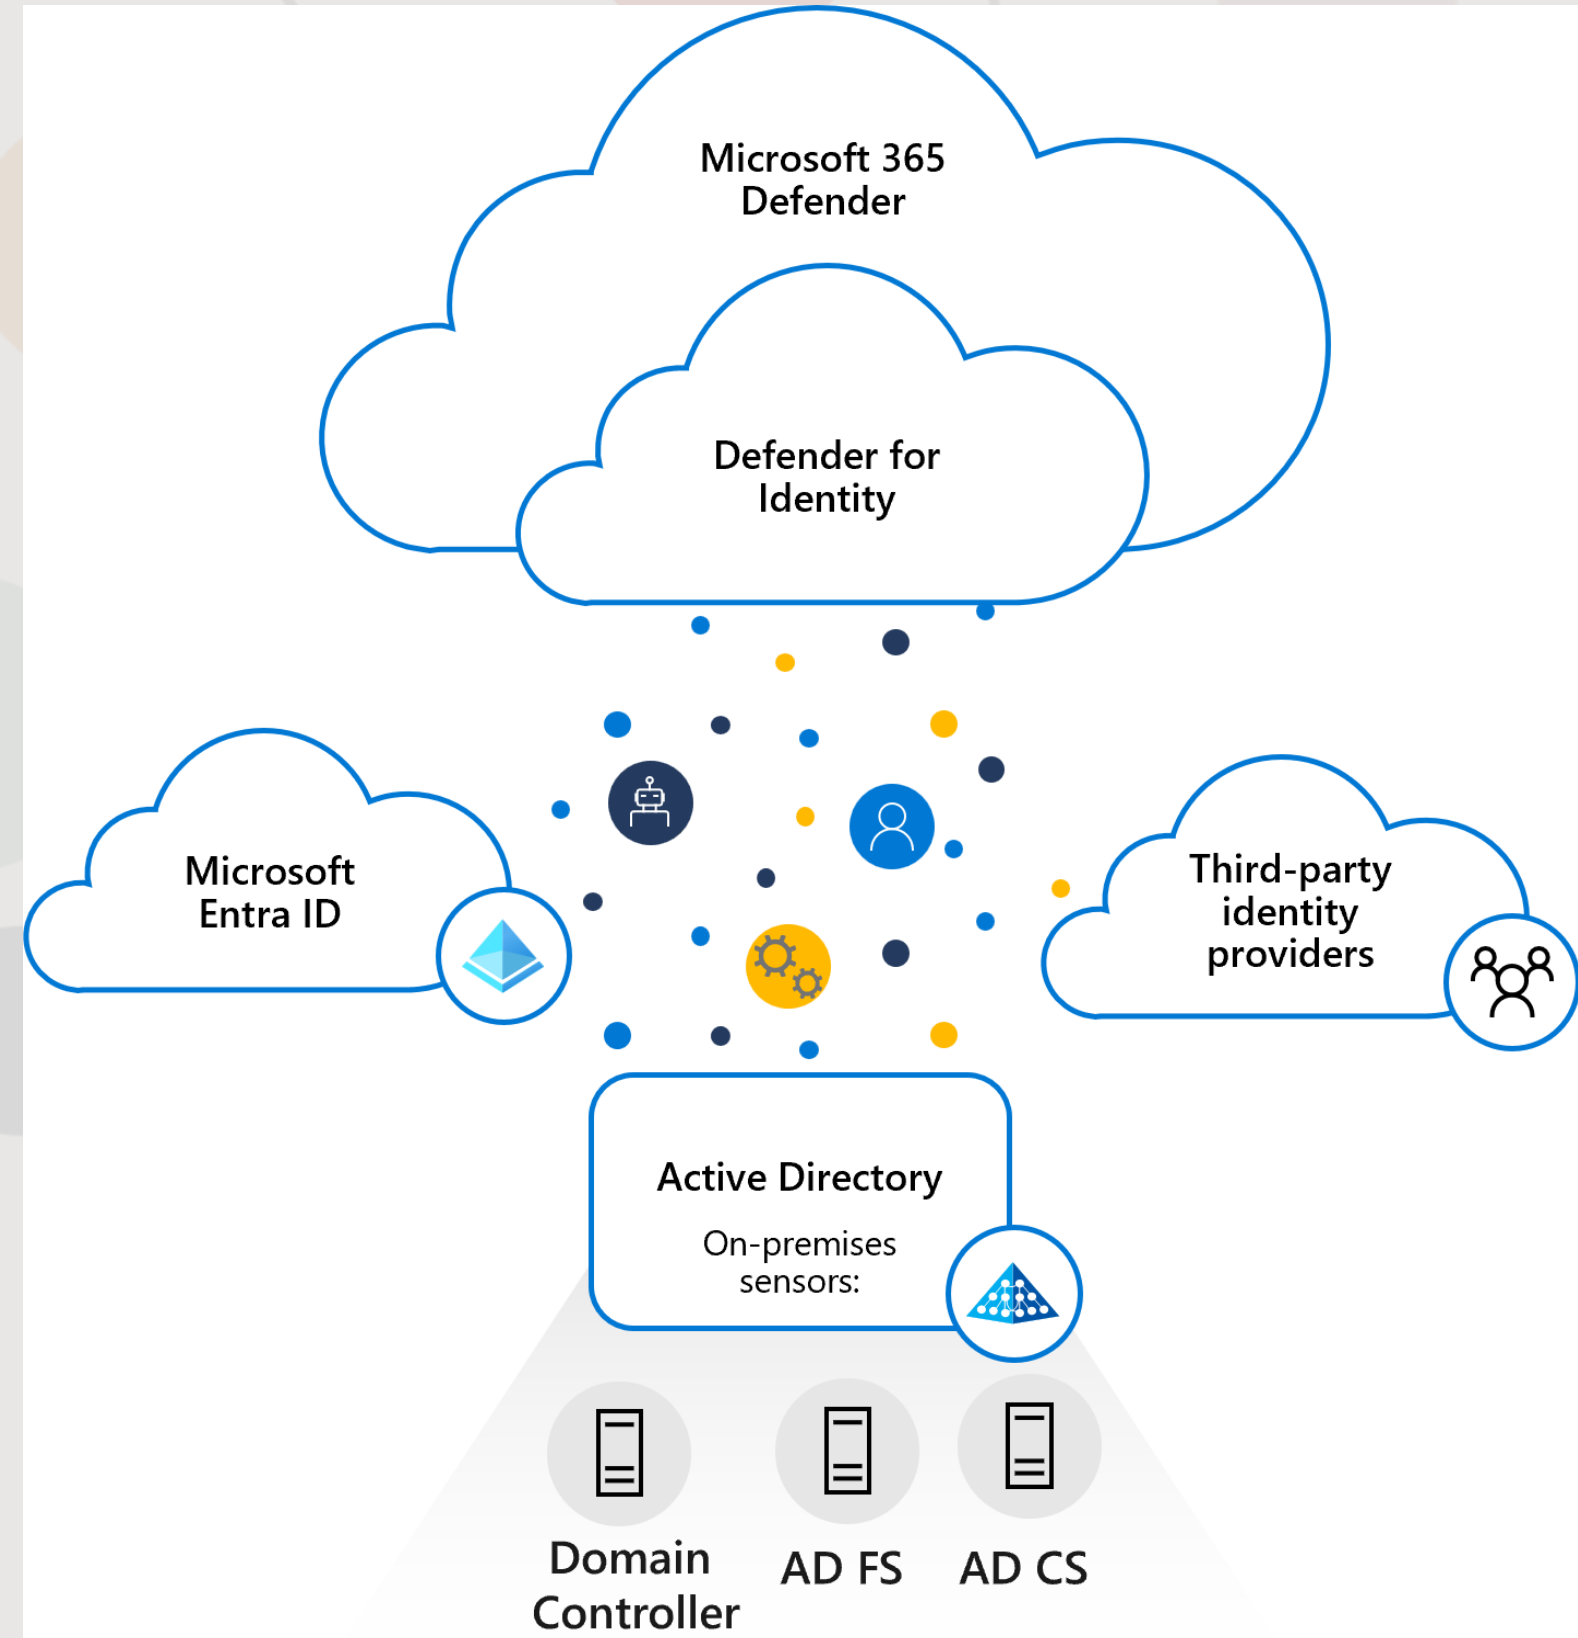

The new Microsoft Defender for Identity sensor for Entra Connect servers provides comprehensive monitoring of synchronization activities between Entra Connect and Active Directory, offering crucial insights into potential security threats and unusual activities. With this enhanced visibility across hybrid identity environments Defender for Identity can now provide new Entra Connect specific security alerts and posture recommendations

DETECTION

- Suspicious Interactive Logon to the Entra Connect Server
- User Password Reset by Entra Connect Account
- Suspicious writeback by Entra Connect on a sensitive user

POSTURE

- Rotate password for Entra Connect connector account
- Remove unnecessary replication permissions for Entra Connect Account
- Change password for Entra seamless SSO account configuration

Enhanced Identity Inventory (Preview)

The Identities page under *Assets* has been updated to provide better visibility and management of identities across your environment.

The updated Identities Inventory page now includes the following tabs:

- **Identities:** A consolidated view of identities across Active Directory, Entra ID. This Identities tab highlights key details, including identity types, and user's information.
- **Cloud application accounts:** Displays a list of cloud application accounts, including those from application connectors and third-party sources (original available in the previous version based on Microsoft Defender for Cloud Apps).

MDO: Collaboration security for Microsoft Teams

Adversaries have started exploiting Microsoft Teams for sophisticated attacks including impersonation and delivery of malicious payloads.

This new enhancement in Microsoft Defender for Office 365 helps protect against phishing, malware, and advanced attacks for Teams users, thanks to a robust set of protection capabilities and security workflows.

Collaboration security for Microsoft Teams is designed to address the rise of new sophisticated attacks targeting Teams with end-to-end features including:

- Improved Teams security posture with increased control over how external organizations communicate with employees
- Better in-line protection for end users from malicious links or attachments
- Easy reporting of suspicious messages to admins and Microsoft
- Threat hunting and response capabilities across

Agents in Microsoft Security Copilot

AI-powered agents represent the natural evolution of Security Copilot, going beyond AI assistant capabilities. They autonomously manage high-volume security and IT tasks, seamlessly integrated with Microsoft Security solutions and partner solutions.

Delivering powerful automation across threat protection, identity management, data security, and IT operations, these agents empower teams to accelerate responses, prioritize risks, and drive efficiency at scale.

Phishing Triage Agent

Alert Triage Agents for Data Loss Prevention and Insider Risk Management

Conditional Access Optimization Agent

Vulnerability Remediation Agent

Threat Intelligence Briefing Agent

Microsoft Security Copilot agents will be available in preview starting April 2025

Bulk user management in Microsoft Entra admin center!

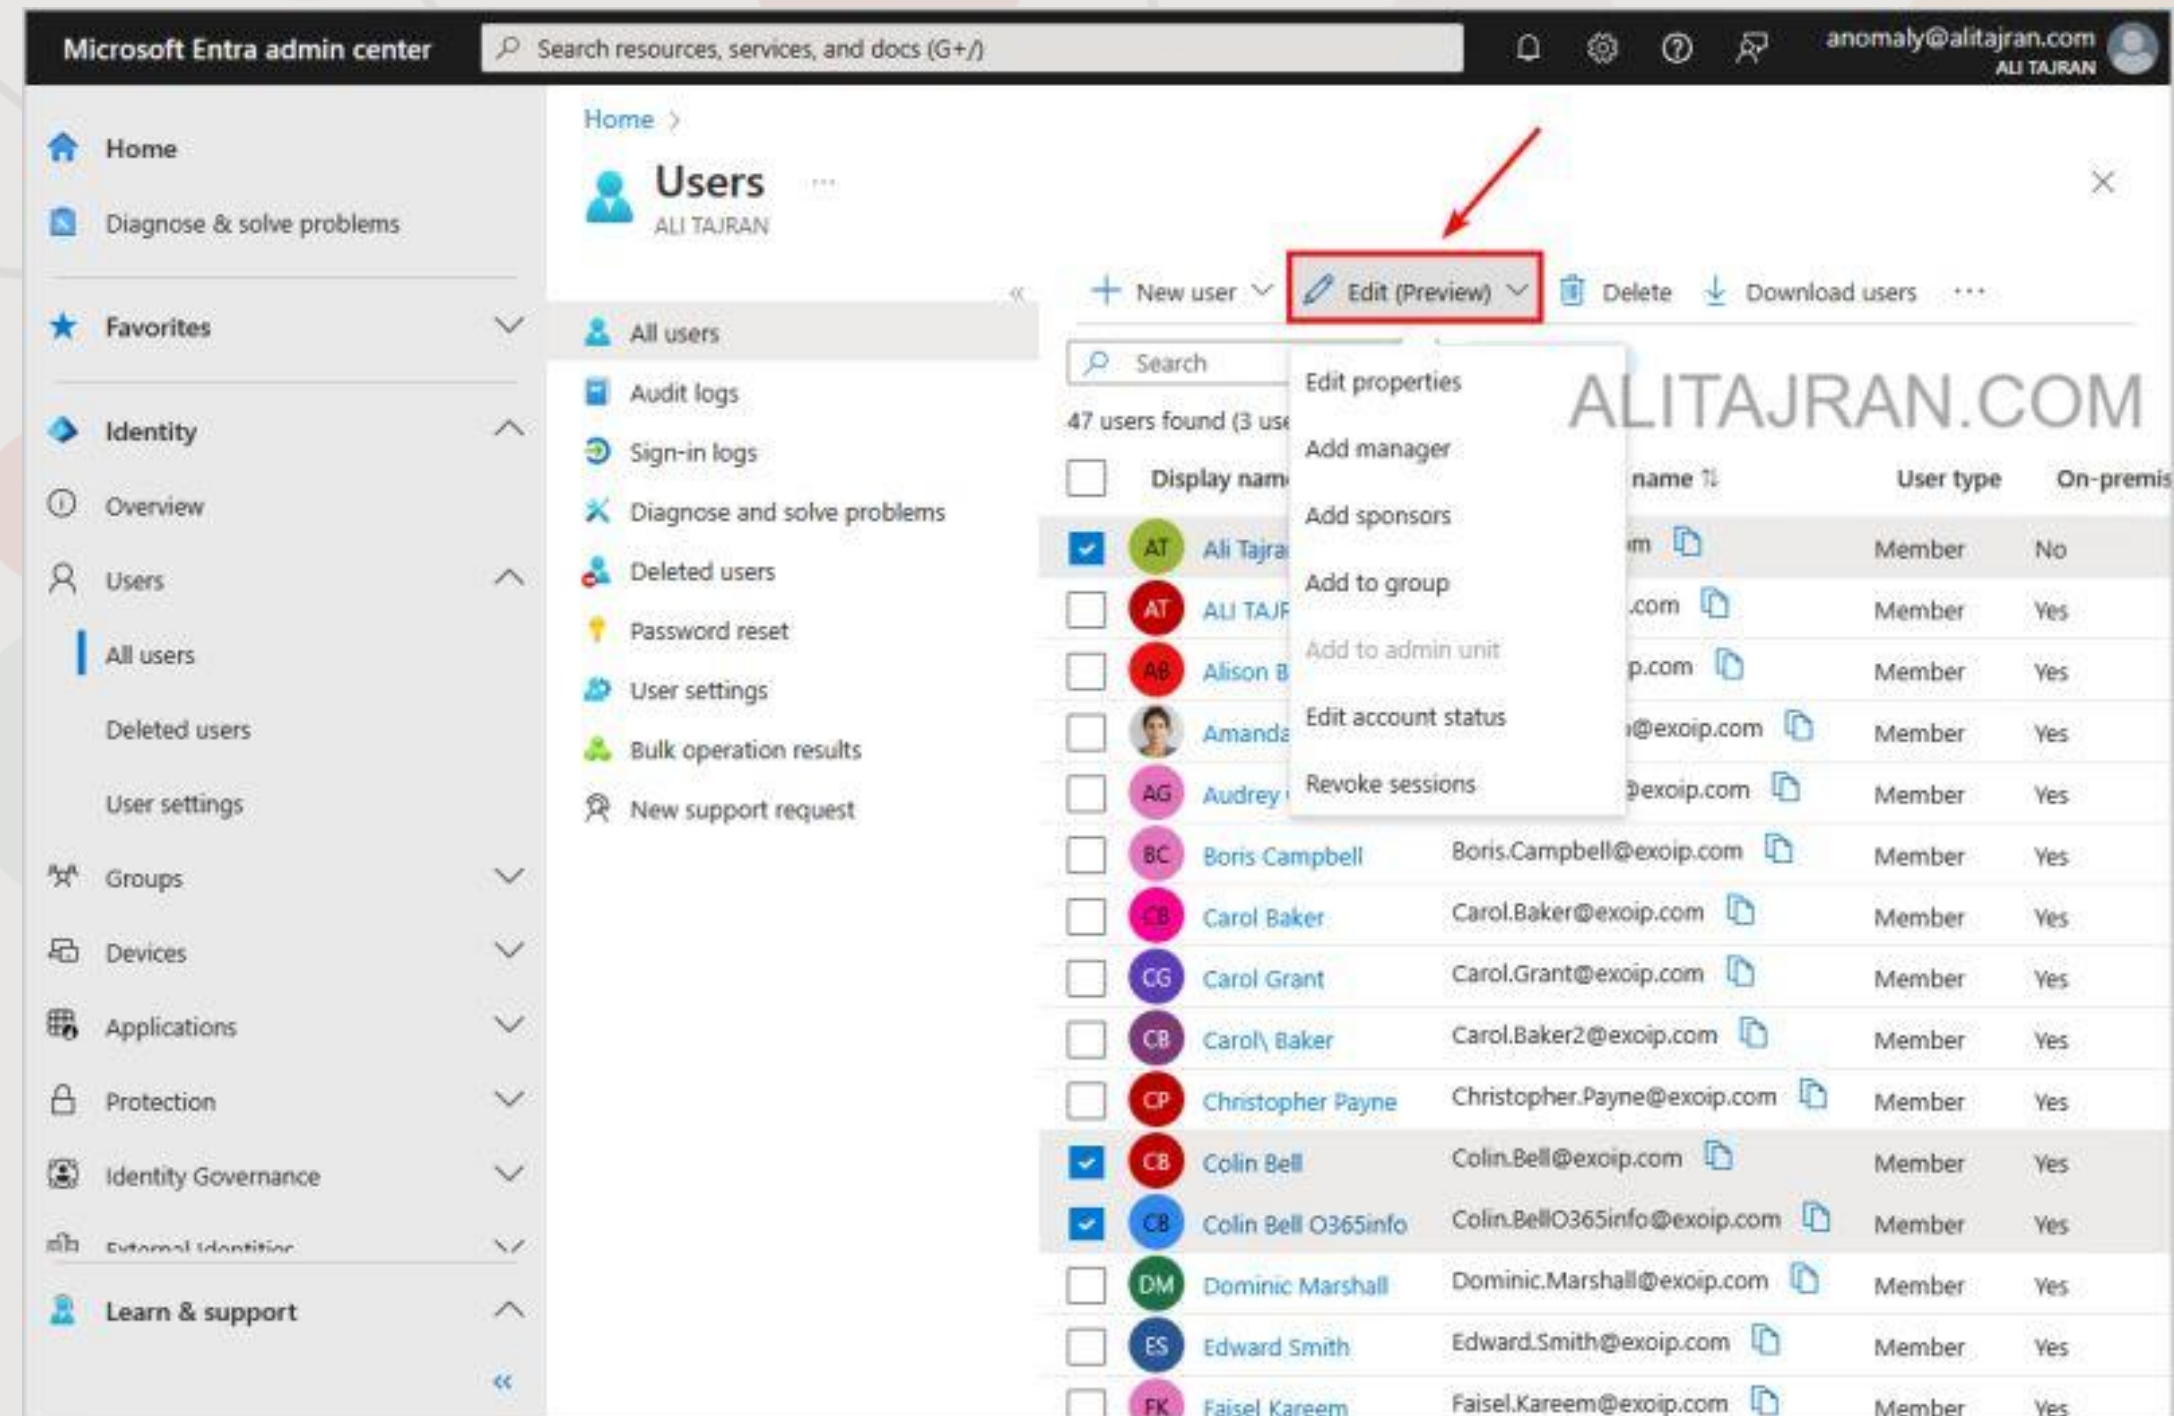

Admins can now multi-select and edit users at once through the Microsoft Entra admin center.

With this new capability, admins can bulk edit user properties, add users to groups, edit account status, and more.

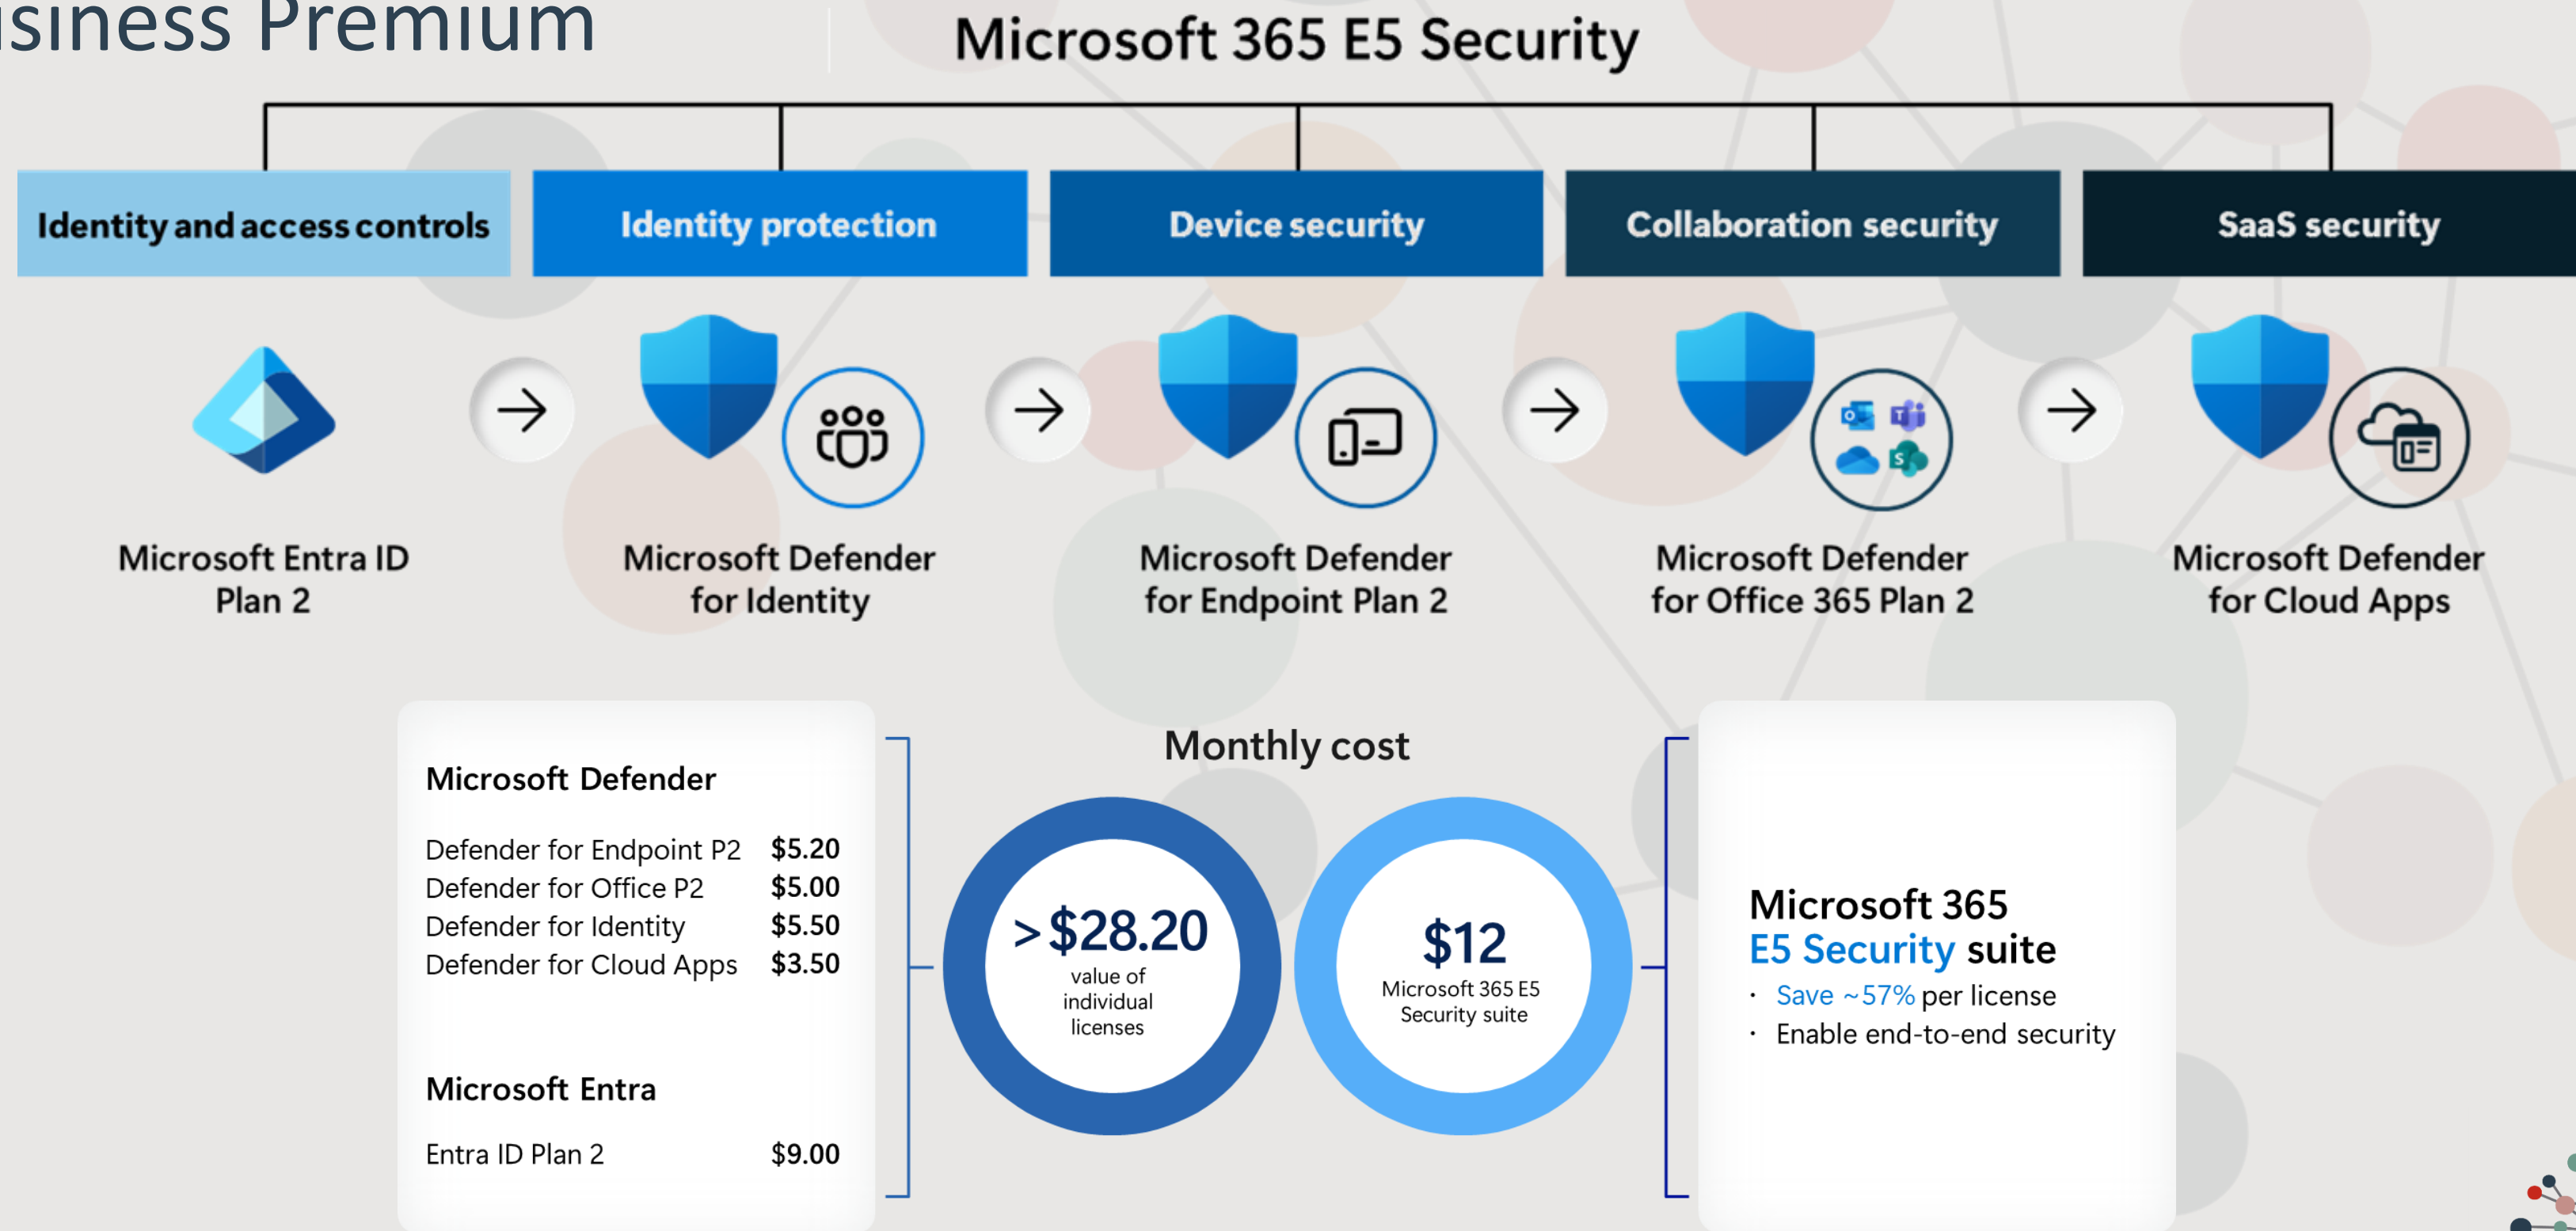

To edit multiple users at once:

1. Sign in to Microsoft Entra admin center
2. Navigate to Identity > Users > All users
3. Select the users that you want to edit
4. Click Edit from the top of the page
5. Select one of the available user management actions

This UX enhancement will significantly improve efficiency for user management tasks in the Microsoft Entra admin center!

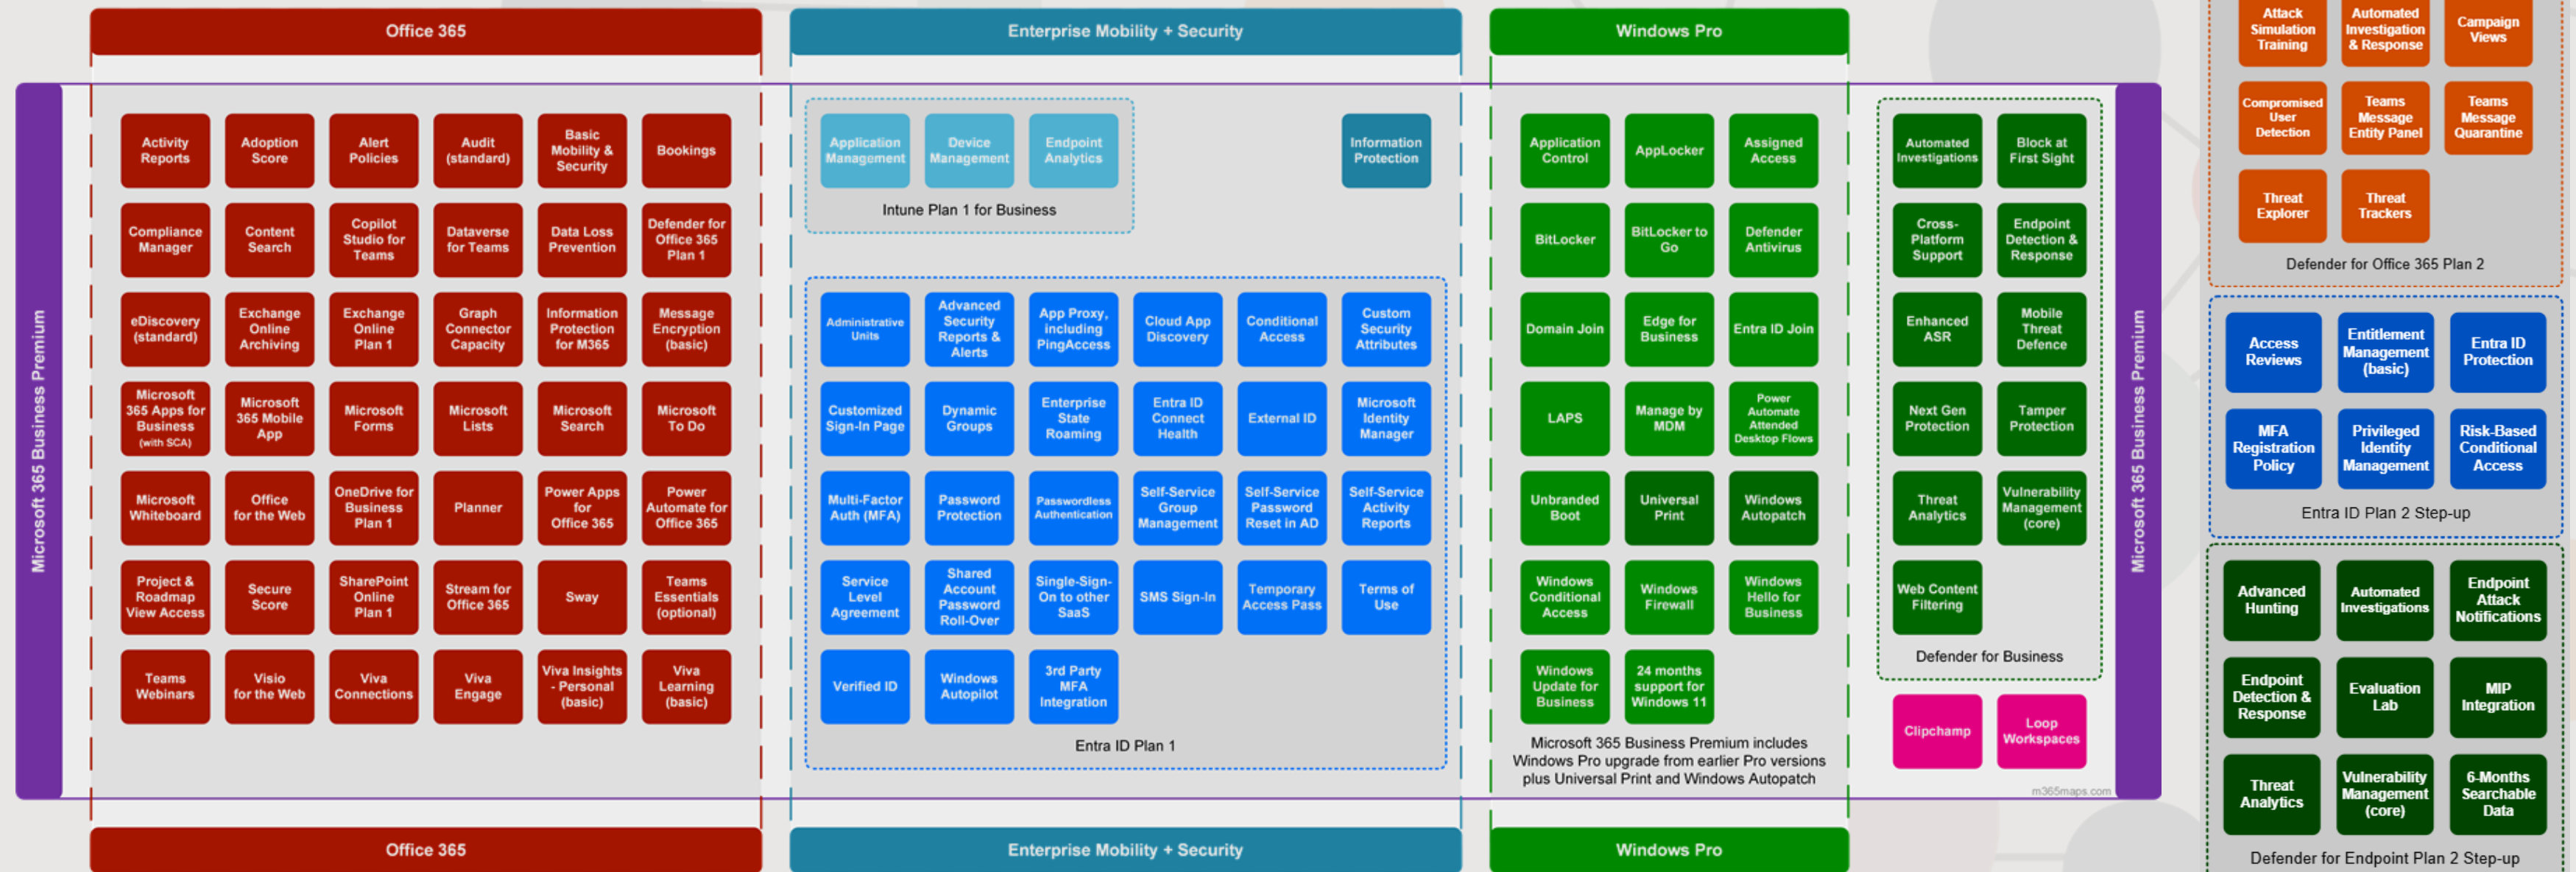

Microsoft 365 E5 Security is now available as an add-on to Microsoft 365 Business Premium

Microsoft 365 E5 Security is now available as an add-on to Microsoft 365 Business Premium

Microsoft 365 Business Premium
January 2025
m365maps.com

<https://techcommunity.microsoft.com/blog/microsoft365businessblog/microsoft-365-e5-security-is-now-available-as-an-add-on-to-microsoft-365-busines/4388436>

Microsoft 365 E5 Security is now available as an add-on to Microsoft 365 Business Premium

Does Microsoft 365 Business Premium plus Microsoft 365 E5 Security allow mixed licensing for endpoint security solutions?

Microsoft Defender for Business does not support mixed licensing so a tenant with Defender for Business (included in Microsoft 365 Business Premium) along with Defender for Endpoint Plan 2 (included in Microsoft 365 Security) will default to Defender for Business.

For example, if you have 80 users licensed for Microsoft 365 Business Premium and you've added Microsoft 365 E5 Security for 30 of those users, the experience for all users will default to Defender for Business.

If you would like to change that to the Defender for Endpoint Plan 2 experience, you should license all users for Defender for Endpoint Plan 2 (either through standalone or Microsoft 365 E5 Security) and then contact Microsoft Support to request the switch for your tenant.

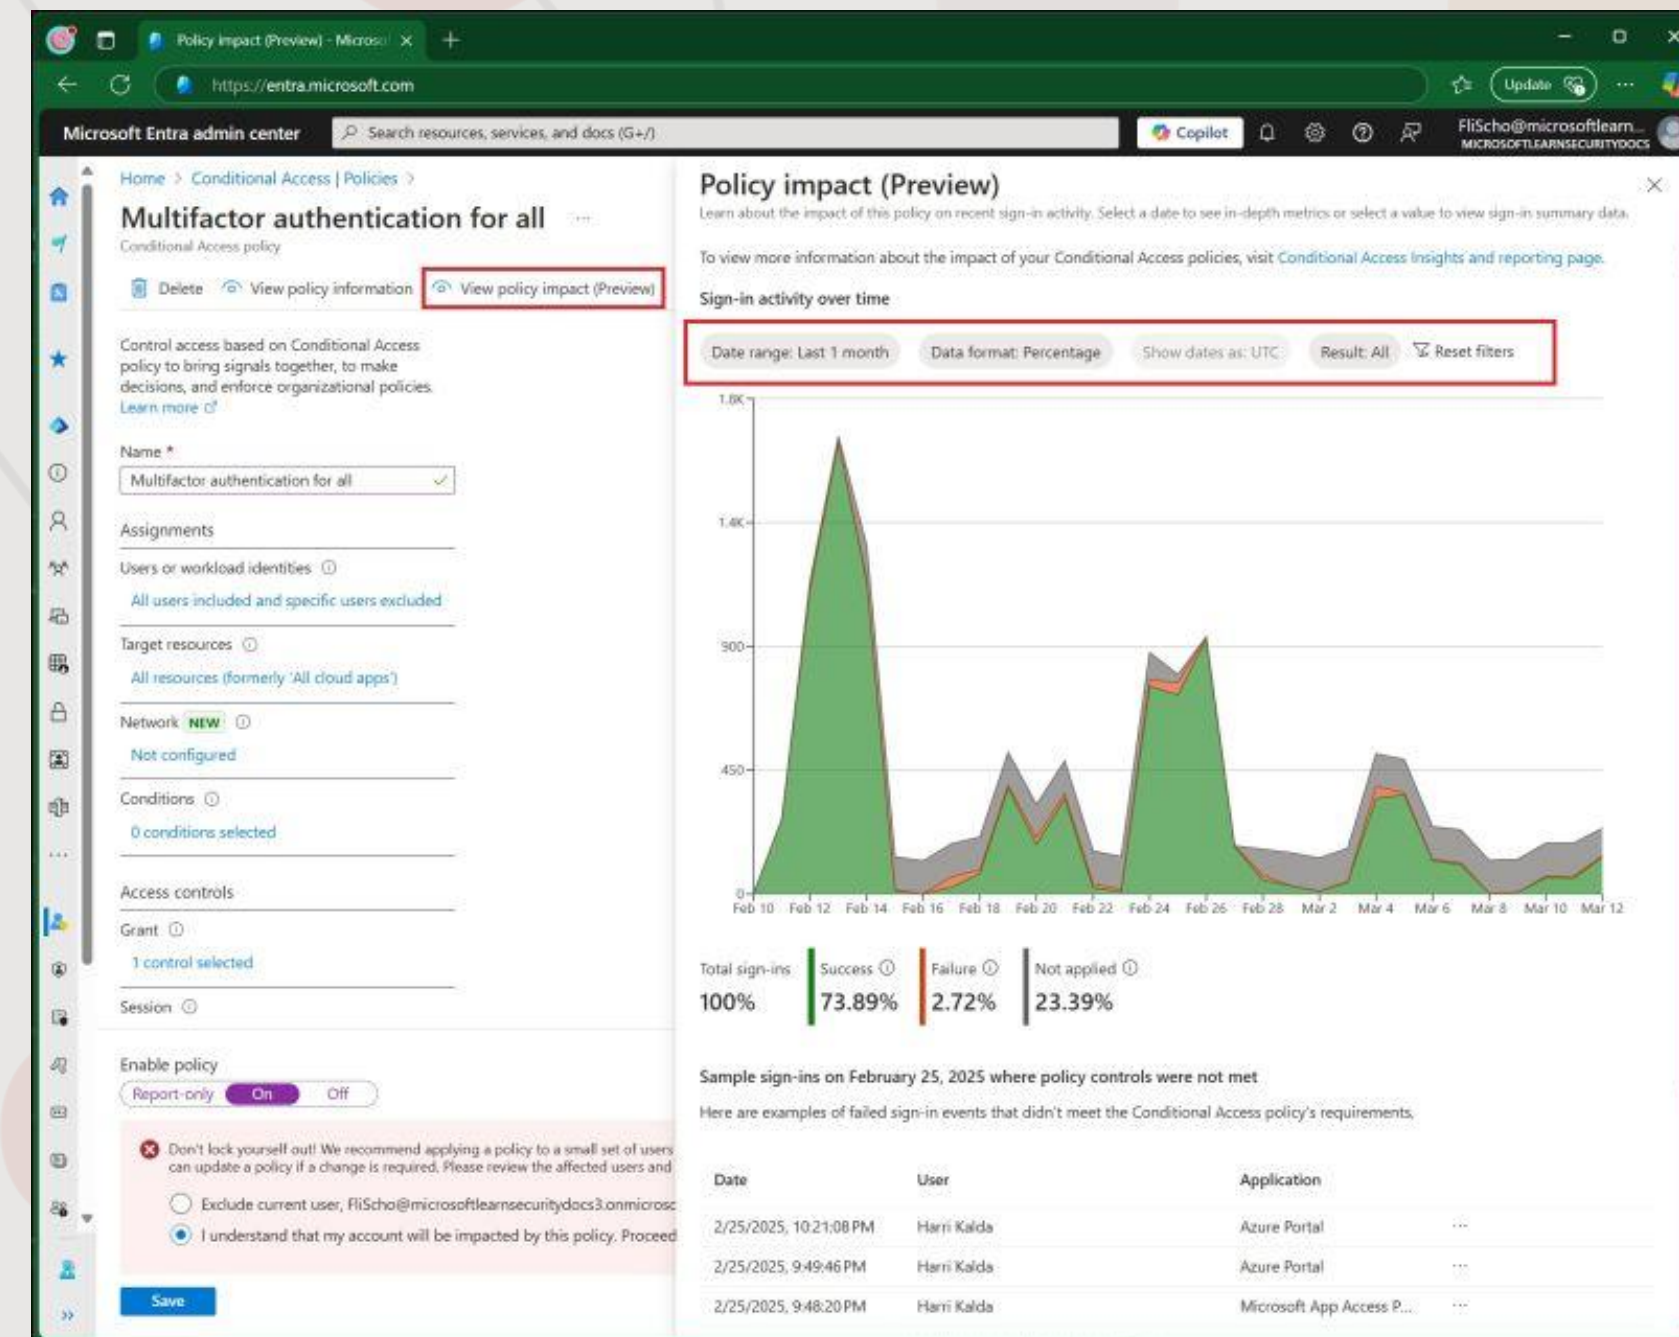

You can learn more here:

<https://learn.microsoft.com/en-us/defender-business/mdb-manage-subscription>

New policy impact view in Conditional Access (in preview)

Admins can see a snapshot of information about the potential or existing impacts of policies on interactive sign-ins in your organization.

This functionality lets you explore impact over a period of the past 24 hours, 7 days, or 1 month. Additionally, you can see and link to a sampling of sign-in events for further detail.

<https://learn.microsoft.com/en-us/entra/identity/conditional-access/concept-conditional-access-report-only#policy-impact-preview>

Authentication methods migration wizard

You can migrate Microsoft Entra ID [legacy policy settings](#) that separately control multifactor authentication (MFA) and self-service password reset (SSPR) to unified management with the [Authentication methods policy](#).

You can use the authentication methods migration guide in the Microsoft Entra admin center to automate the migration. The guide provides a wizard to help audit your current policy settings for MFA and SSPR. Then it consolidates those settings in the Authentication methods policy, where they can be managed together more easily.

Microsoft Azure

Authentication method settings migration

Overview

Review + migrate

Migrating to the new authentication method policies

The authentication methods policy is the recommended way to manage authentication methods, including modern methods like passwordless authentication. This guide will help you automatically convert the authentication methods enabled in your legacy multifactor authentication (MFA) and legacy self-service password reset (SSPR) policies to corresponding authentication method policies. We will offer recommendations to help you increase your security posture.

Why is this important?

Current authentication method settings

Legacy MFA method settings

Legacy SSPR method settings

Migrating to the new authentication method policies

Home > Authentication methods | Policies >

Authentication method settings migration

Overview

Review + migrate

Authentication method policies

If a method is enabled in either legacy MFA or SSPR policy, it'll be enabled in the authentication methods policy. If a user is in scope for a method, they may use it to authenticate and for password reset (some methods aren't supported for some scenarios).

Learn more

As part of migrating your authentication methods, we recommend enabling passkeys and temporary access pass for users to leverage the most seamless and secure methods for authentication and recovery. See [passkey-settings](#) for the latest on which passkeys are enabled by default

Method	Status	Targeted users & groups	Security	
Passkey (FIDO2)	RECOMMENDED	On	All users	High security
Temporary access pass	RECOMMENDED	On	All users	High security
Microsoft Authenticator (push & passwordless)	RECOMMENDED	On	All users	High security
Hardware OATH tokens	On	All users	Medium security	
Third-party software OATH tokens	On	All users	Medium security	
Email OTP	On	All users	Low security	
SMS	On	All users	Low security	
Voice call	Off		Low security	

Voice call is a method previously configured but now unavailable due to licensing. Please upgrade to regain access to this feature.

Authentication methods in Microsoft Entra ID - QR code authentication method (Preview)

QR code authentication is a simple authentication method primarily designed for frontline workers. It consists of a unique QR code and a numeric PIN. The QR code serves as an identifier and is unique to the user. It can be downloaded and printed by using the Microsoft Entra admin center, My Staff, or Microsoft Graph. For convenience, the QR code can be attached to a badge or any other wearable item.

Microsoft Entra PowerShell

The Microsoft Entra PowerShell module is a command-line tool that allows administrators and developers to manage and automate Microsoft Entra resources programmatically. This includes efficiently managing users, groups, applications, service principals, policies, and more

```
Install-Module -Name Microsoft.Entra -Repository PSGallery -Scope CurrentUser -Force -  
AllowClobber
```

```
Connect-Entra -Scopes 'User.Read.All'
```

```
Get-Command -Module Microsoft.Entra*
```

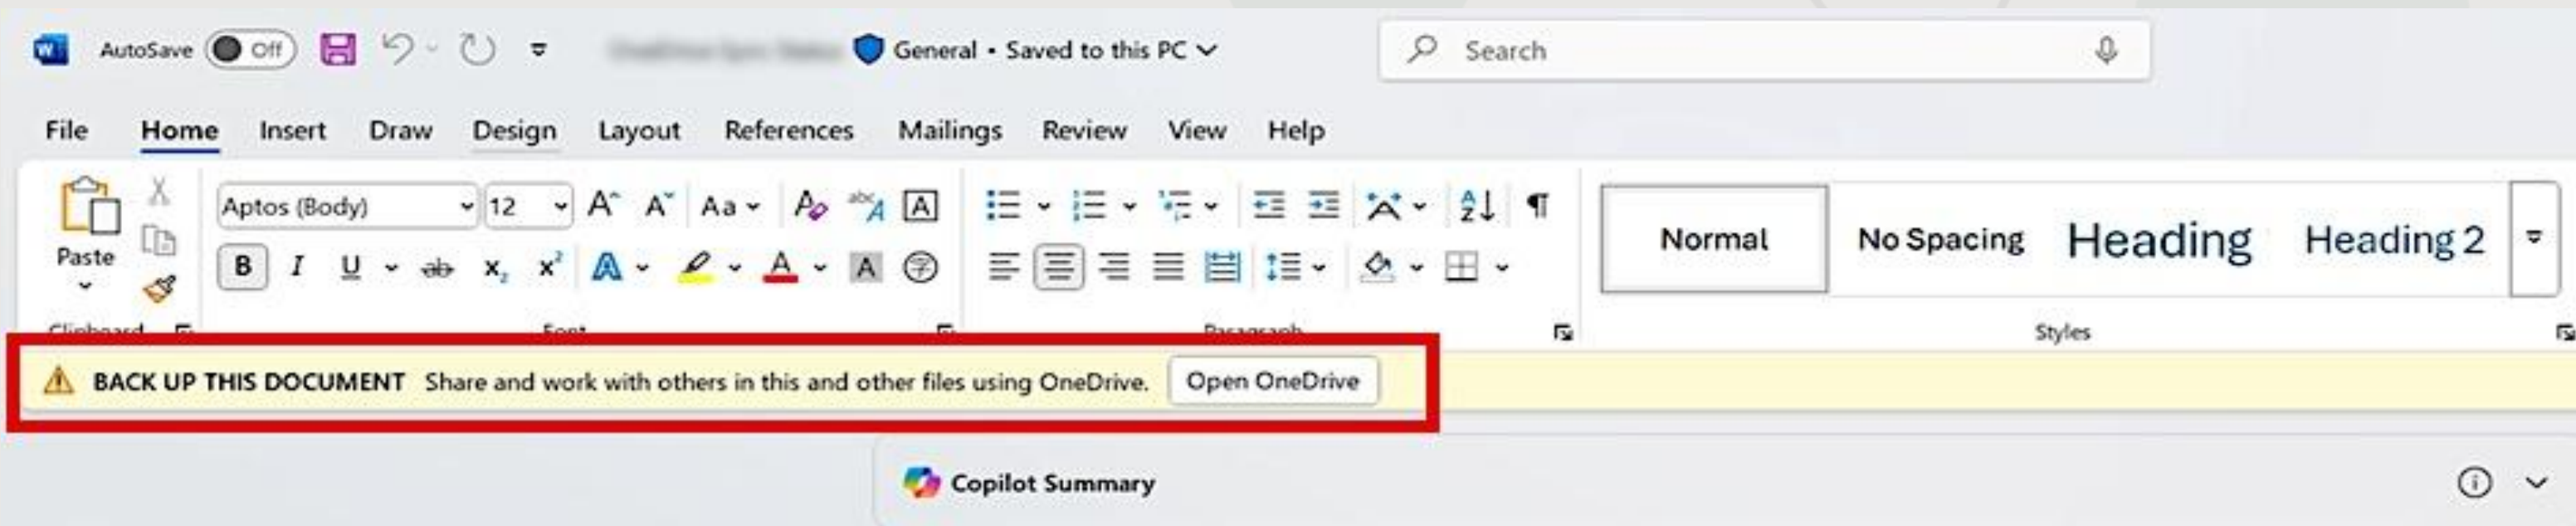

BACK UP THIS DOCUMENT: Share and work with others in this and other files using OneDrive

Beginning in mid-March 2025, Microsoft will begin showing prompts within its Microsoft 365 desktop apps on Windows, encouraging users to back up their files to OneDrive. These notifications will appear in applications such as Word, Excel, and PowerPoint, urging users to activate the OneDrive Known Folder Move (KFM) feature.

According to Microsoft, these prompts will not appear for users in organizations where KFM has been disabled.

The update will be deployed automatically, and Microsoft recommends that administrators inform their users ahead of time. Organizations that wish to prevent users from receiving these prompts can block KFM to stop the update from applying to their devices.

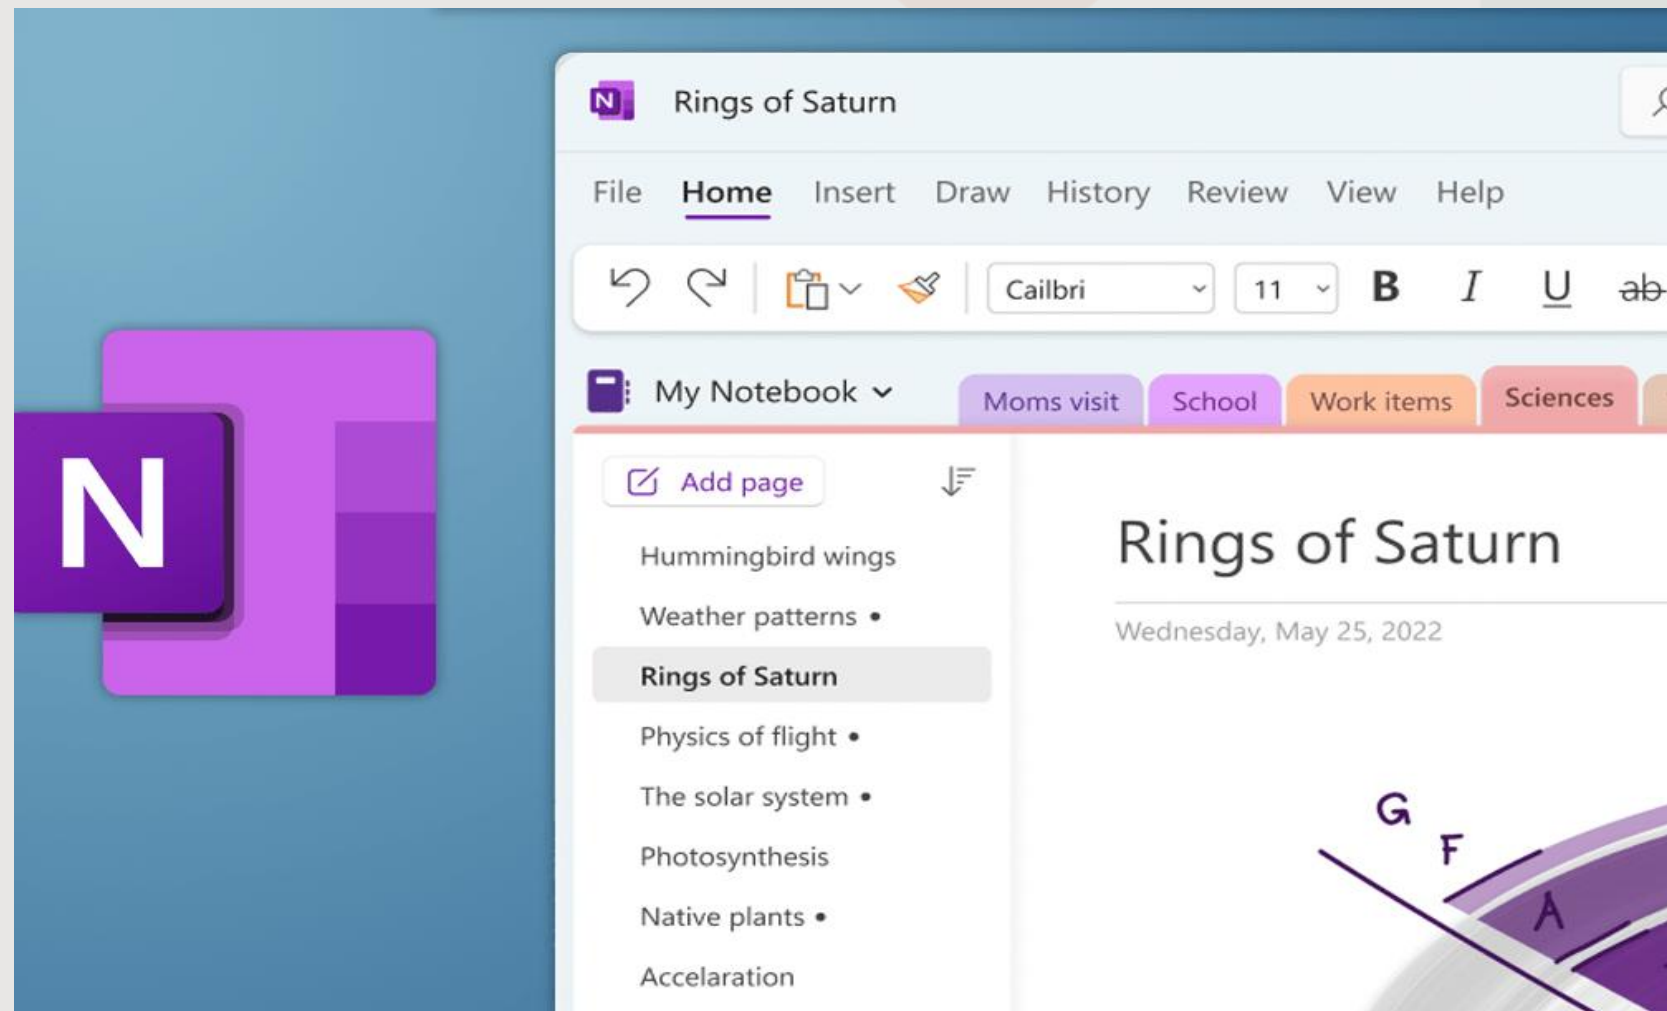

KFM - <https://learn.microsoft.com/en-gb/sharepoint/redirect-known-folders>

Deprecation of OneNote for Windows 10 app . Slowed down sync performance

Microsoft is ramping up efforts to move users from the legacy **OneNote for Windows 10** app to the newer, modern OneNote version included with Microsoft 365. Starting **June 2025**, the company will **intentionally slow down sync performance** in the older app, negatively impacting real-time collaboration and cross-device access.

In **July 2025**, Microsoft will also begin displaying **in-app prompts and banners** in the Windows 10 version, urging users to switch. Although support for OneNote for Windows 10 officially ends in **October 2025**, these changes are designed to make the older app less appealing ahead of that date. Microsoft's broader strategy to unify its various OneNote versions.

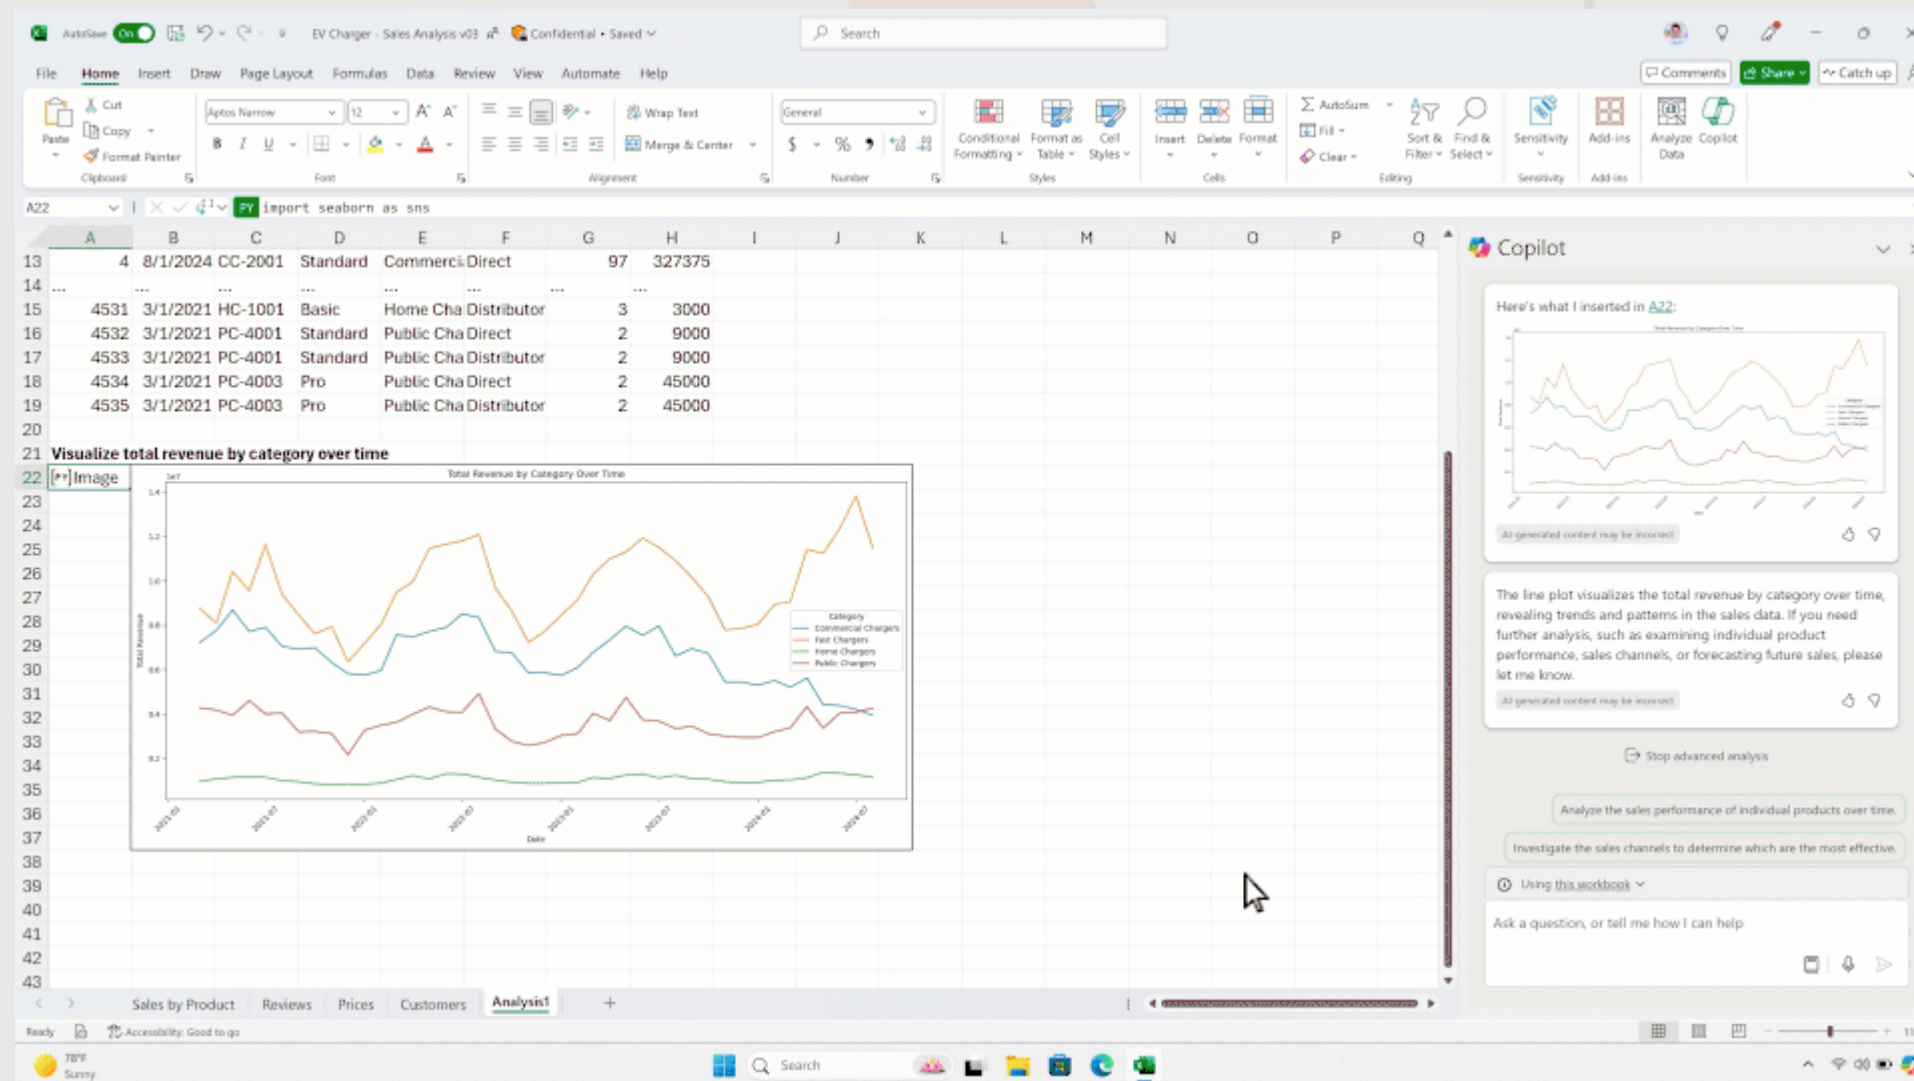

Python in Excel is generally available

Python in Excel is now generally available to eligible Enterprise and Business users in Excel for the web and preview for Family and Personal users.

By combining the versatility of Python with the familiarity of Excel, users can now perform complex calculations, automate tasks, and generate visualizations—all within a single environment.

The addition of Copilot enhances this further, allowing users to leverage AI to generate and interpret Python code with simple prompts.

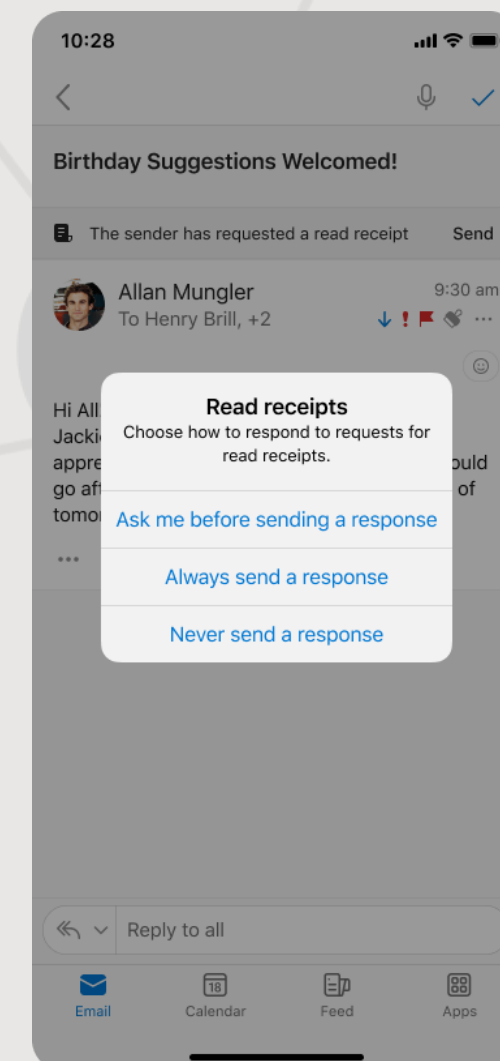

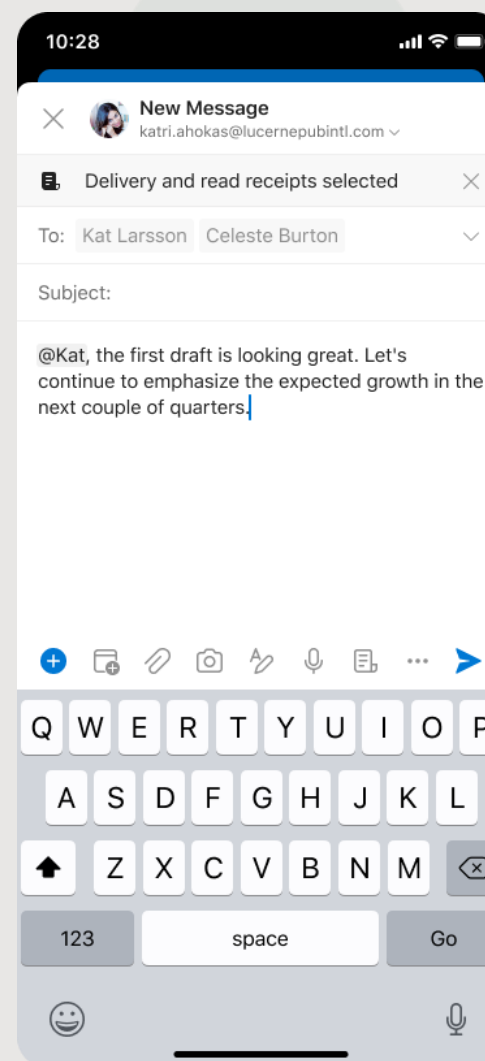

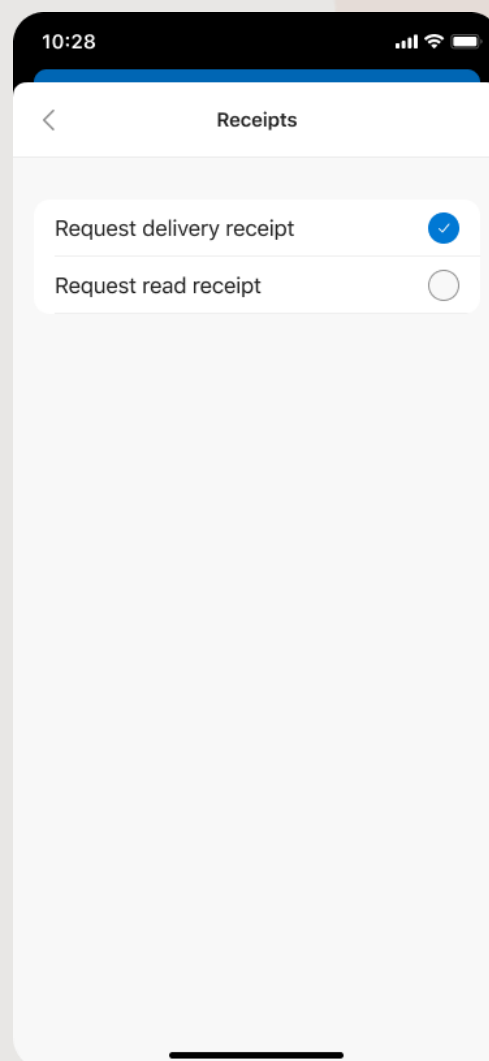

Delivery and read receipts in Outlook for Android and iOS

Outlook for Android and iOS now has the ability to request delivery or read receipts, or respond to a request from someone else to confirm you've seen their email.

This feature gives both the sender and the recipient control, meaning that you can opt in or out of sending read receipts depending on the situation. Additionally, you can set a default response for when others request a read receipt from you rather than respond every time, making the entire process more efficient.

<https://techcommunity.microsoft.com/blog/microsoft365insiderblog/delivery-and-read-receipts-in-outlook-for-android-and-ios/4386420>

Prevent/Fix Policy changes for Microsoft Teams devices using Device Code Flow Authentication

Microsoft is rolling out a new Microsoft Managed Policy to help further secure your tenants against potential threats to accounts using Device Code Flow (DCF) authentication.

This policy will not be visible to tenants who have deployed Android based Teams devices in shared spaces as these accounts are not associated with real users, such as:

1. Microsoft Teams Rooms (Android) FoR and Console
2. IP Phones (Licensed as Teams Shared Devices)
3. Panels
4. Displays

However, if it is visible to your tenant in the Entra ID Portal, we recommend that the Global admins should create **exclusion lists for excluding those accounts which sign in on these devices**, so that Admins can continue to use the remote sign in and management capabilities.

Admins can customize the Microsoft-managed policy according to the tenants' specific needs.

When this will happen:

The new policy is currently rolling out.

How this will affect your organization:

In the case where the admins do not exclude these devices and enable the policy, the devices will get signed out.

ADMIN IMPACT

The logo for BC Health, featuring a stylized network of colorful dots (blue, green, orange, red) connected by lines, with the letters "BC" in blue and "h" in green below it.

Teams Rooms Pro Management portal update

Admins now have expanded device health signals with sign-on, Teams Rooms app heartbeat, and network status for Android devices, offering consistency across operating systems. You'll also get poor call quality signals which help identify root causes and create tickets saving time and effort for IT.

In response to customer demand for consolidation of admin portals, IT admins will have a unified device management experience, for all Teams Rooms on Windows, through the Pro Management portal. Access is being expanded to Basic and Standard licensed rooms, providing the same functionality found in Teams admin center for that license type.

The Teams admin center agent will no longer be needed and will be decommissioned at the end of April.

First focusing on Windows, the unified experience will include Teams Rooms on Android in the future.

And, lastly, IT admins can manage rooms more effectively with the AI assistant in the Pro Management portal. It's designed to quickly provide product help and information specific to your device environment, it's available for public preview in the coming weeks. You'll want to be sure to explore this feature.

Generally available early next quarter

Microsoft Teams system tray icon and menu are changing

Microsoft is improving the Microsoft Teams app icon and menu in the Microsoft Windows system tray (taskbar notification area) for ease of use and to reduce the number of steps to perform routine tasks.

This applies to Teams for Windows desktop.

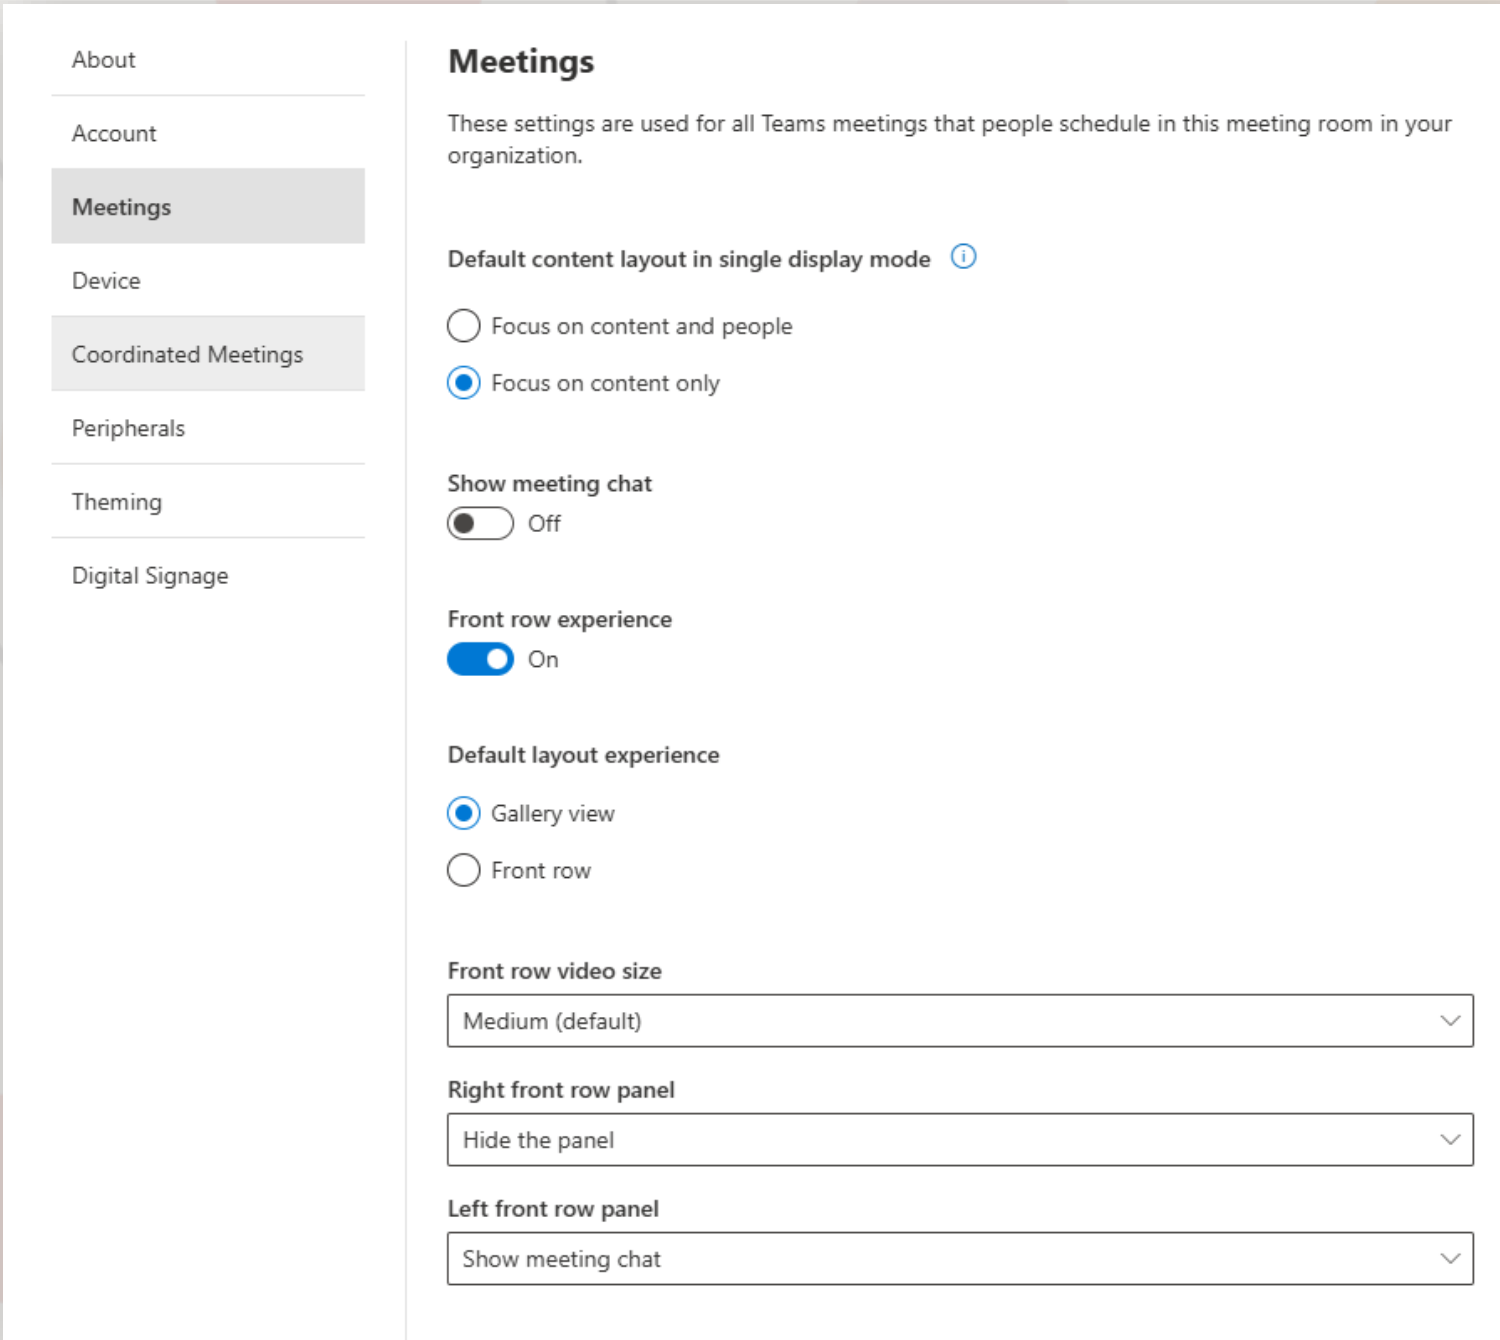

Managing Microsoft Teams Rooms on Windows devices

Teams Rooms devices have application settings that can either be applied on the device and synchronized with the Teams Rooms Pro management portal, or applied from the Teams Rooms Pro management portal to the device.

In the Teams Rooms Pro management portal, certain Teams Rooms application settings can be changed from the Rooms detail settings pane. Applying these changes require restarting the Teams Rooms application on the device to apply the setting change.

The Microsoft Teams Rooms on Windows application uses a SkypeSettings.XML configuration file to manage application settings on the device. When settings are changed on the device, a synchronization task updates the Teams Rooms Pro management portal settings for that device.

The screenshot shows the 'Meetings' settings page in the Teams Rooms Pro management portal. On the left is a navigation menu with options: About, Account, Meetings (selected), Device, Coordinated Meetings, Peripherals, Theming, and Digital Signage. The main content area is titled 'Meetings' and includes a sub-header: 'These settings are used for all Teams meetings that people schedule in this meeting room in your organization.' The settings include: 'Default content layout in single display mode' with radio buttons for 'Focus on content and people' and 'Focus on content only' (selected); 'Show meeting chat' with a toggle switch set to 'Off'; 'Front row experience' with a toggle switch set to 'On'; 'Default layout experience' with radio buttons for 'Gallery view' (selected) and 'Front row'; 'Front row video size' with a dropdown menu set to 'Medium (default)'; 'Right front row panel' with a dropdown menu set to 'Hide the panel'; and 'Left front row panel' with a dropdown menu set to 'Show meeting chat'.

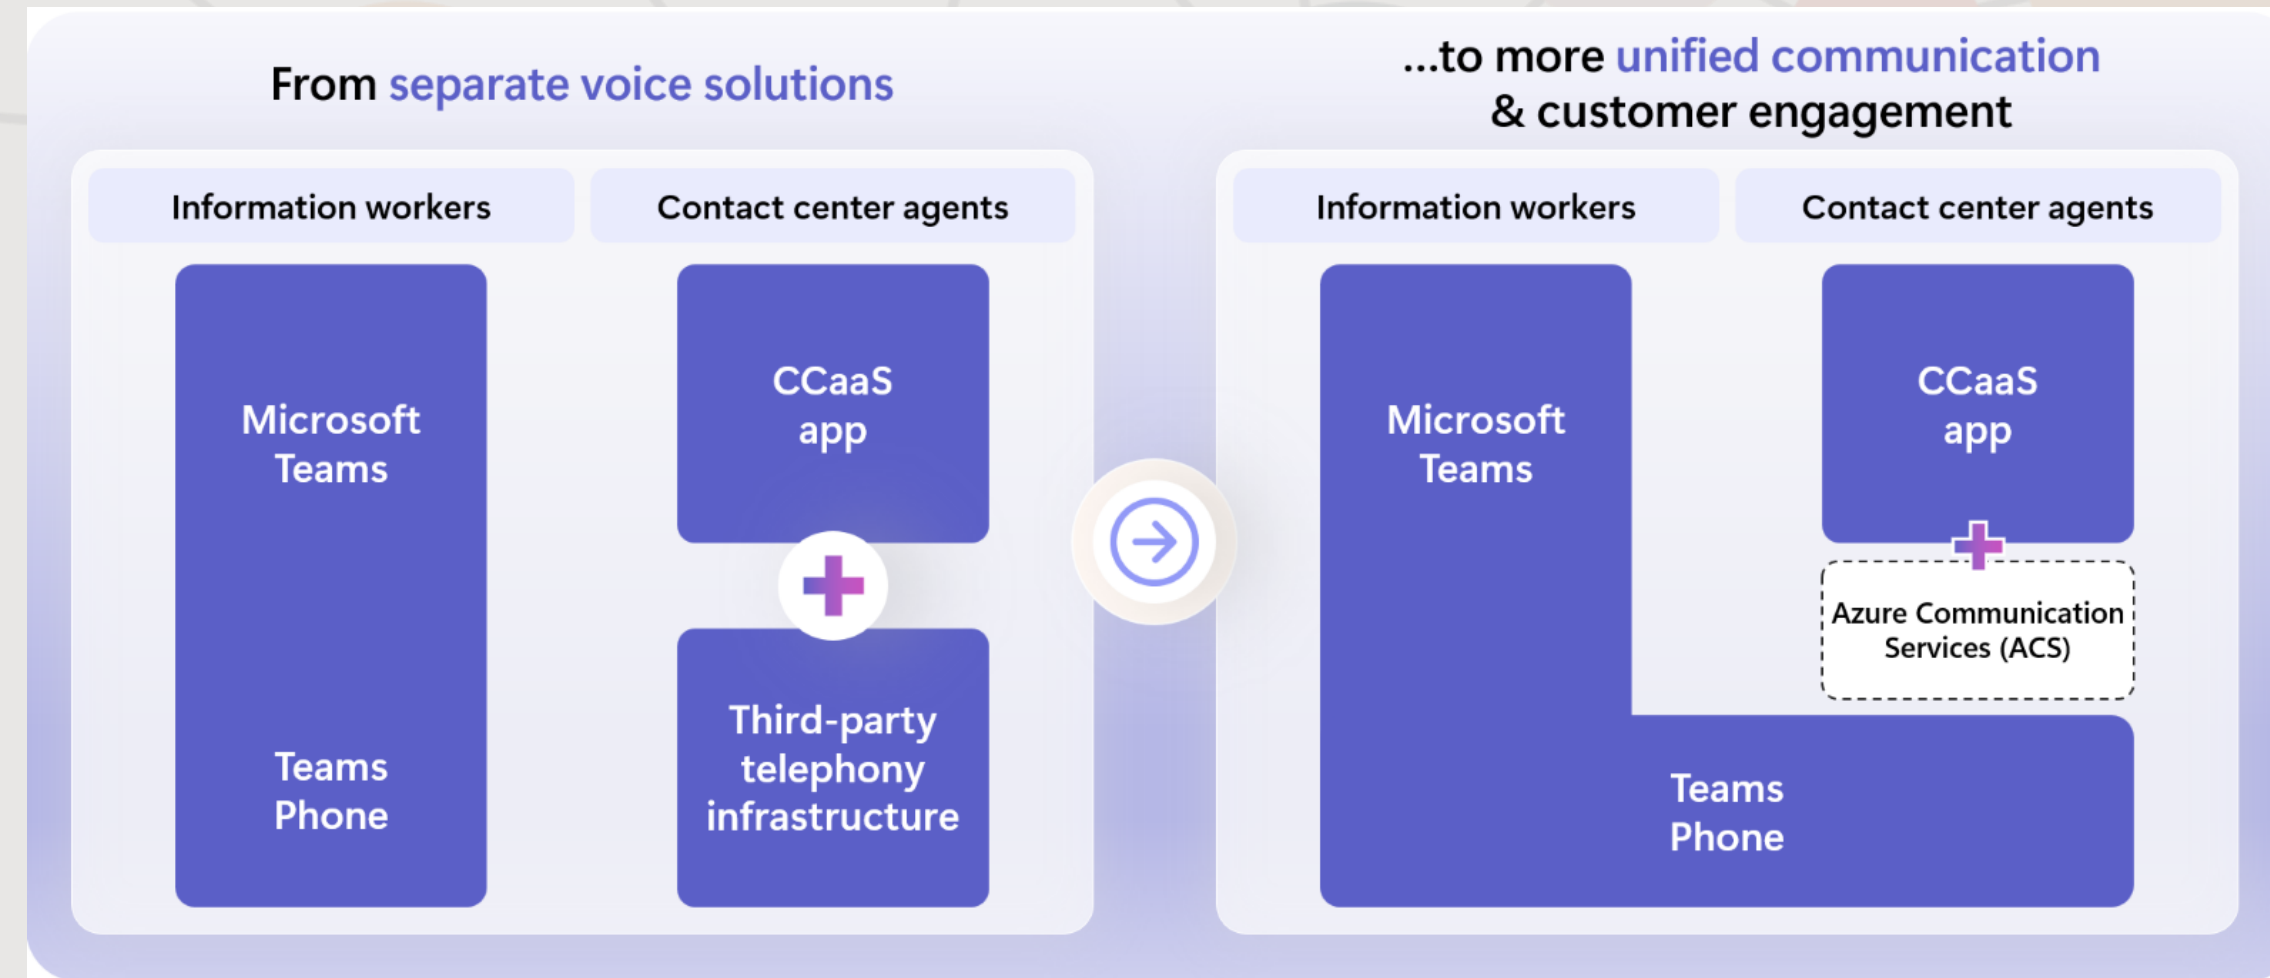

<https://learn.microsoft.com/en-us/MicrosoftTeams/rooms/pro-portal-settings>

Nuova integrazione Teams Phone – Azure Communication Services

Azure Communication Services Call Automation and Calling SDK now enable CCaaS developers to extend Teams Phone capabilities into their application. Key benefits of Teams Phone extensibility include:

- **Consolidate Telephony for UCaaS and CCaaS:** Simplified setup with no need to configure and administer separate phone systems. Customers can leverage their Teams phone telephony investment for contact center deployments.
- **Gen AI Integration:** Utilize AI to streamline processes and empower customer service agents with automation capabilities, with direct access to Azure AI technology.
- **Extend UCaaS Capabilities to CCaaS:** Take advantage of Teams Phone enterprise features, including emergency calling, dial plan policies, wide geographic availability of Public Switched Telephone Network (PSTN) connectivity options and much more.
- **Agent Notification handling:** Allow data segregation between CCaaS persona and UCaaS persona with the choice of ringing either the Teams standard client or a CCaaS application.
- **Cost Efficiency:** Enable ISVs to build cost-effective solutions using existing Teams Phone plans, without adding Azure Communication Services numbers or Direct Routing.

<https://techcommunity.microsoft.com/blog/azurecommunicationservicesblog/teams-phone-extensibility-powered-by-azure-communication-services/4393530>

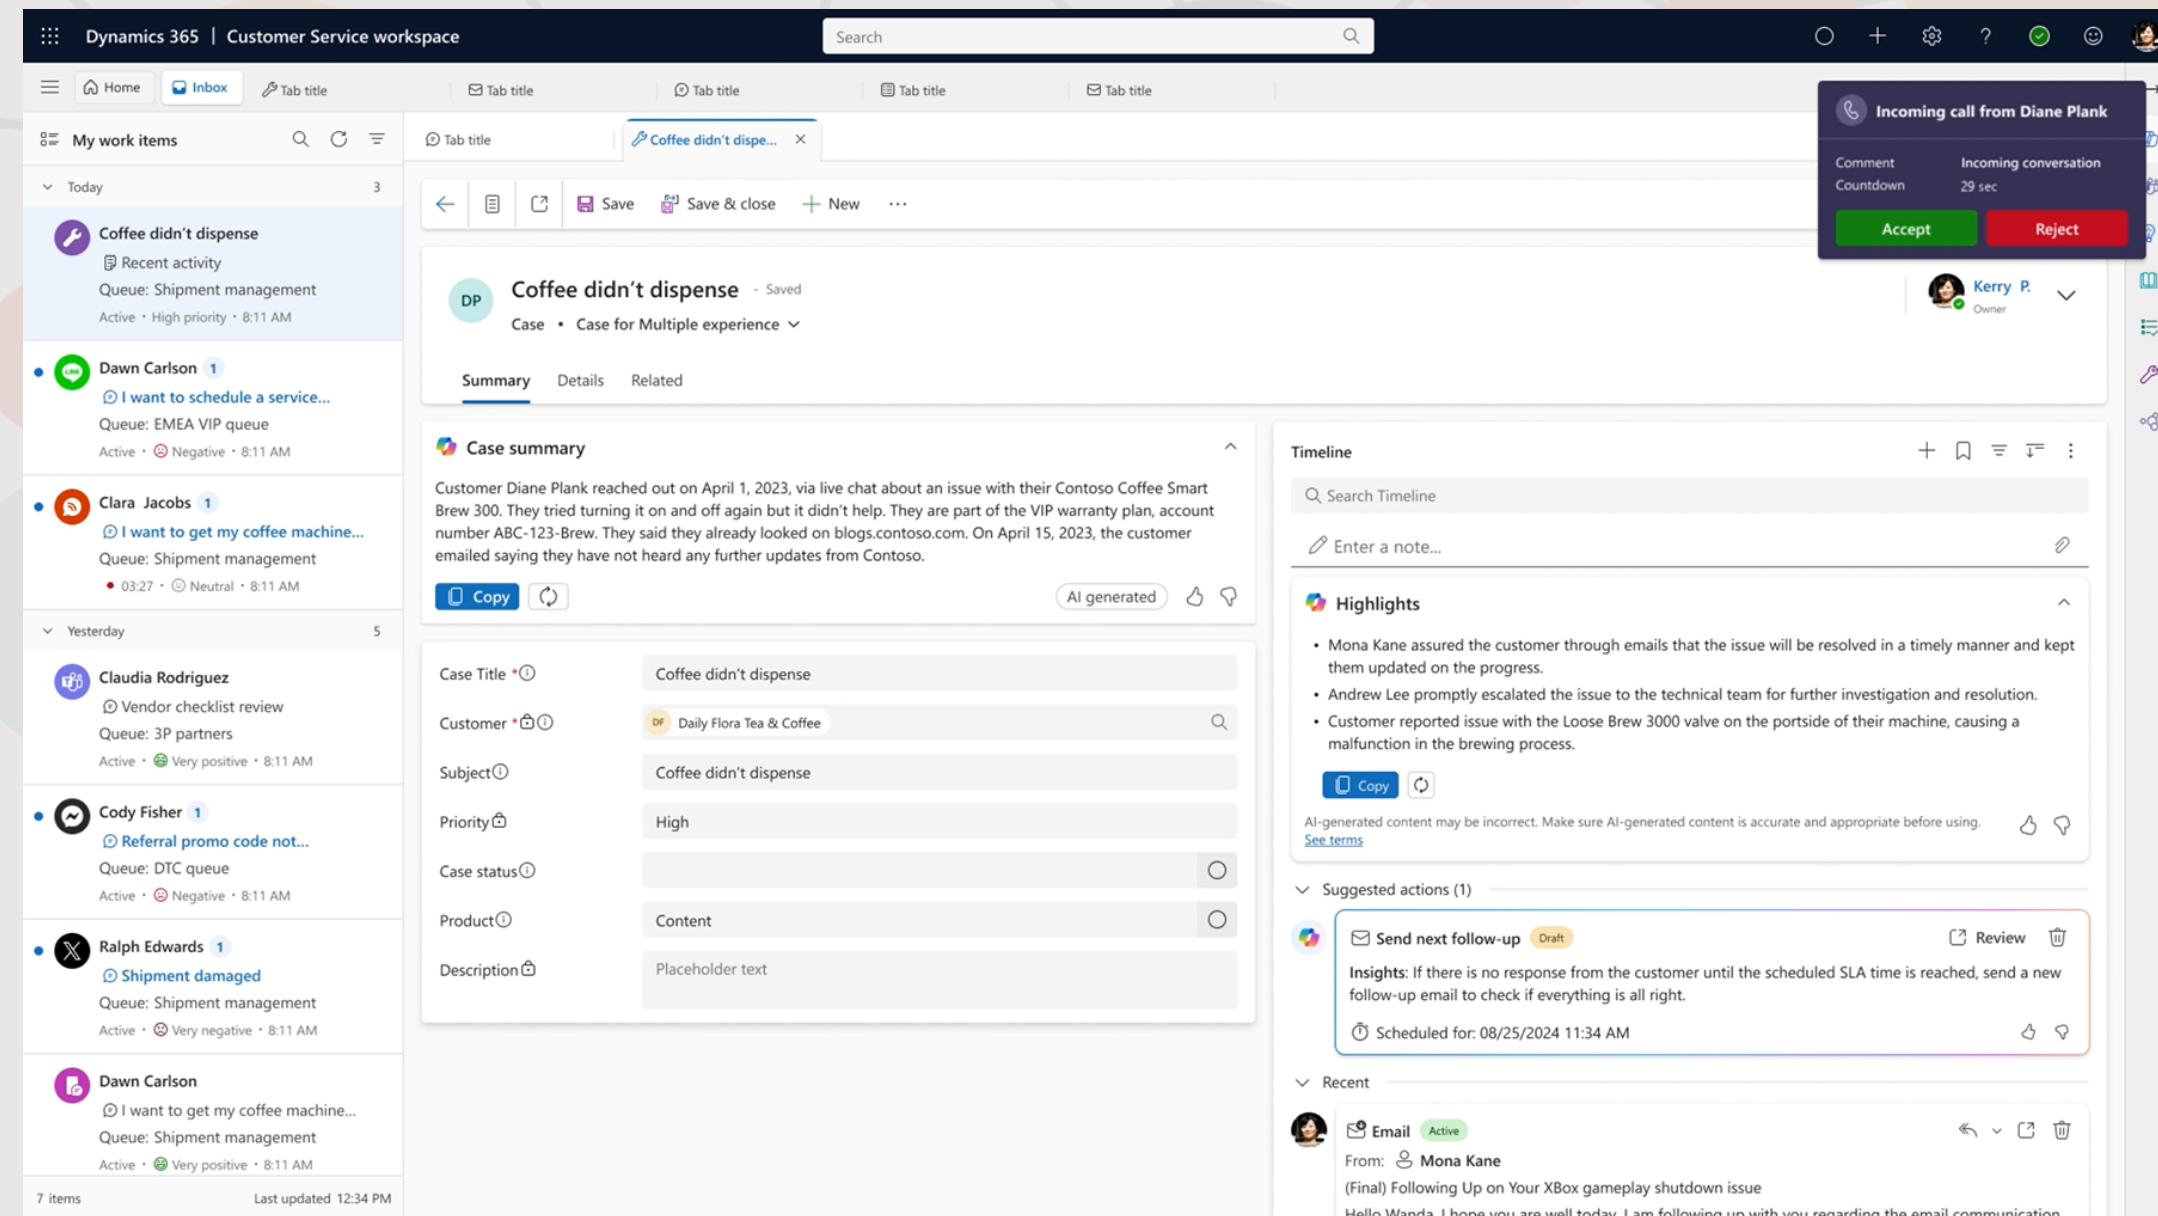

Teams Phone extensibility for Microsoft Dynamics 365 Contact Center and certified ISVs solutions

Teams Phone extensibility for Microsoft Dynamics 365 Contact Center aimed at helping customers benefit from and extend their existing telephony investment with Teams Phone into the contact center.

Customers with Teams Phone and Dynamics 365 Contact Center will be able to leverage Teams Phone as a single, integrated solution to power calling across their unified communications as a service (UCaaS) and contact center as a service (CCaaS) solutions—streamlining the deployment, management, and billing of their telephony infrastructure.

Through consolidating their telephony on one platform with Teams Phone and Dynamics 365 Contact Center, contact center customers can for example:

- Apply existing Teams Phone licenses to enable telephony for Dynamics 365 Contact Center users.
- Alleviate the need to configure and administer a separate phone system for contact center deployments.
- Leverage the broad geographic availability of Teams Phone numbers.
- Take advantage of Teams Phone enterprise features, including the familiar Teams management interface.

<https://techcommunity.microsoft.com/blog/microsoftteamsblog/teams-phone-extensibility-for-dynamics-365-contact-center-and-certified-isv-solu/4392046>

Copilot in Teams Phone: Use Copilot during Teams calls without turning on transcription or recording

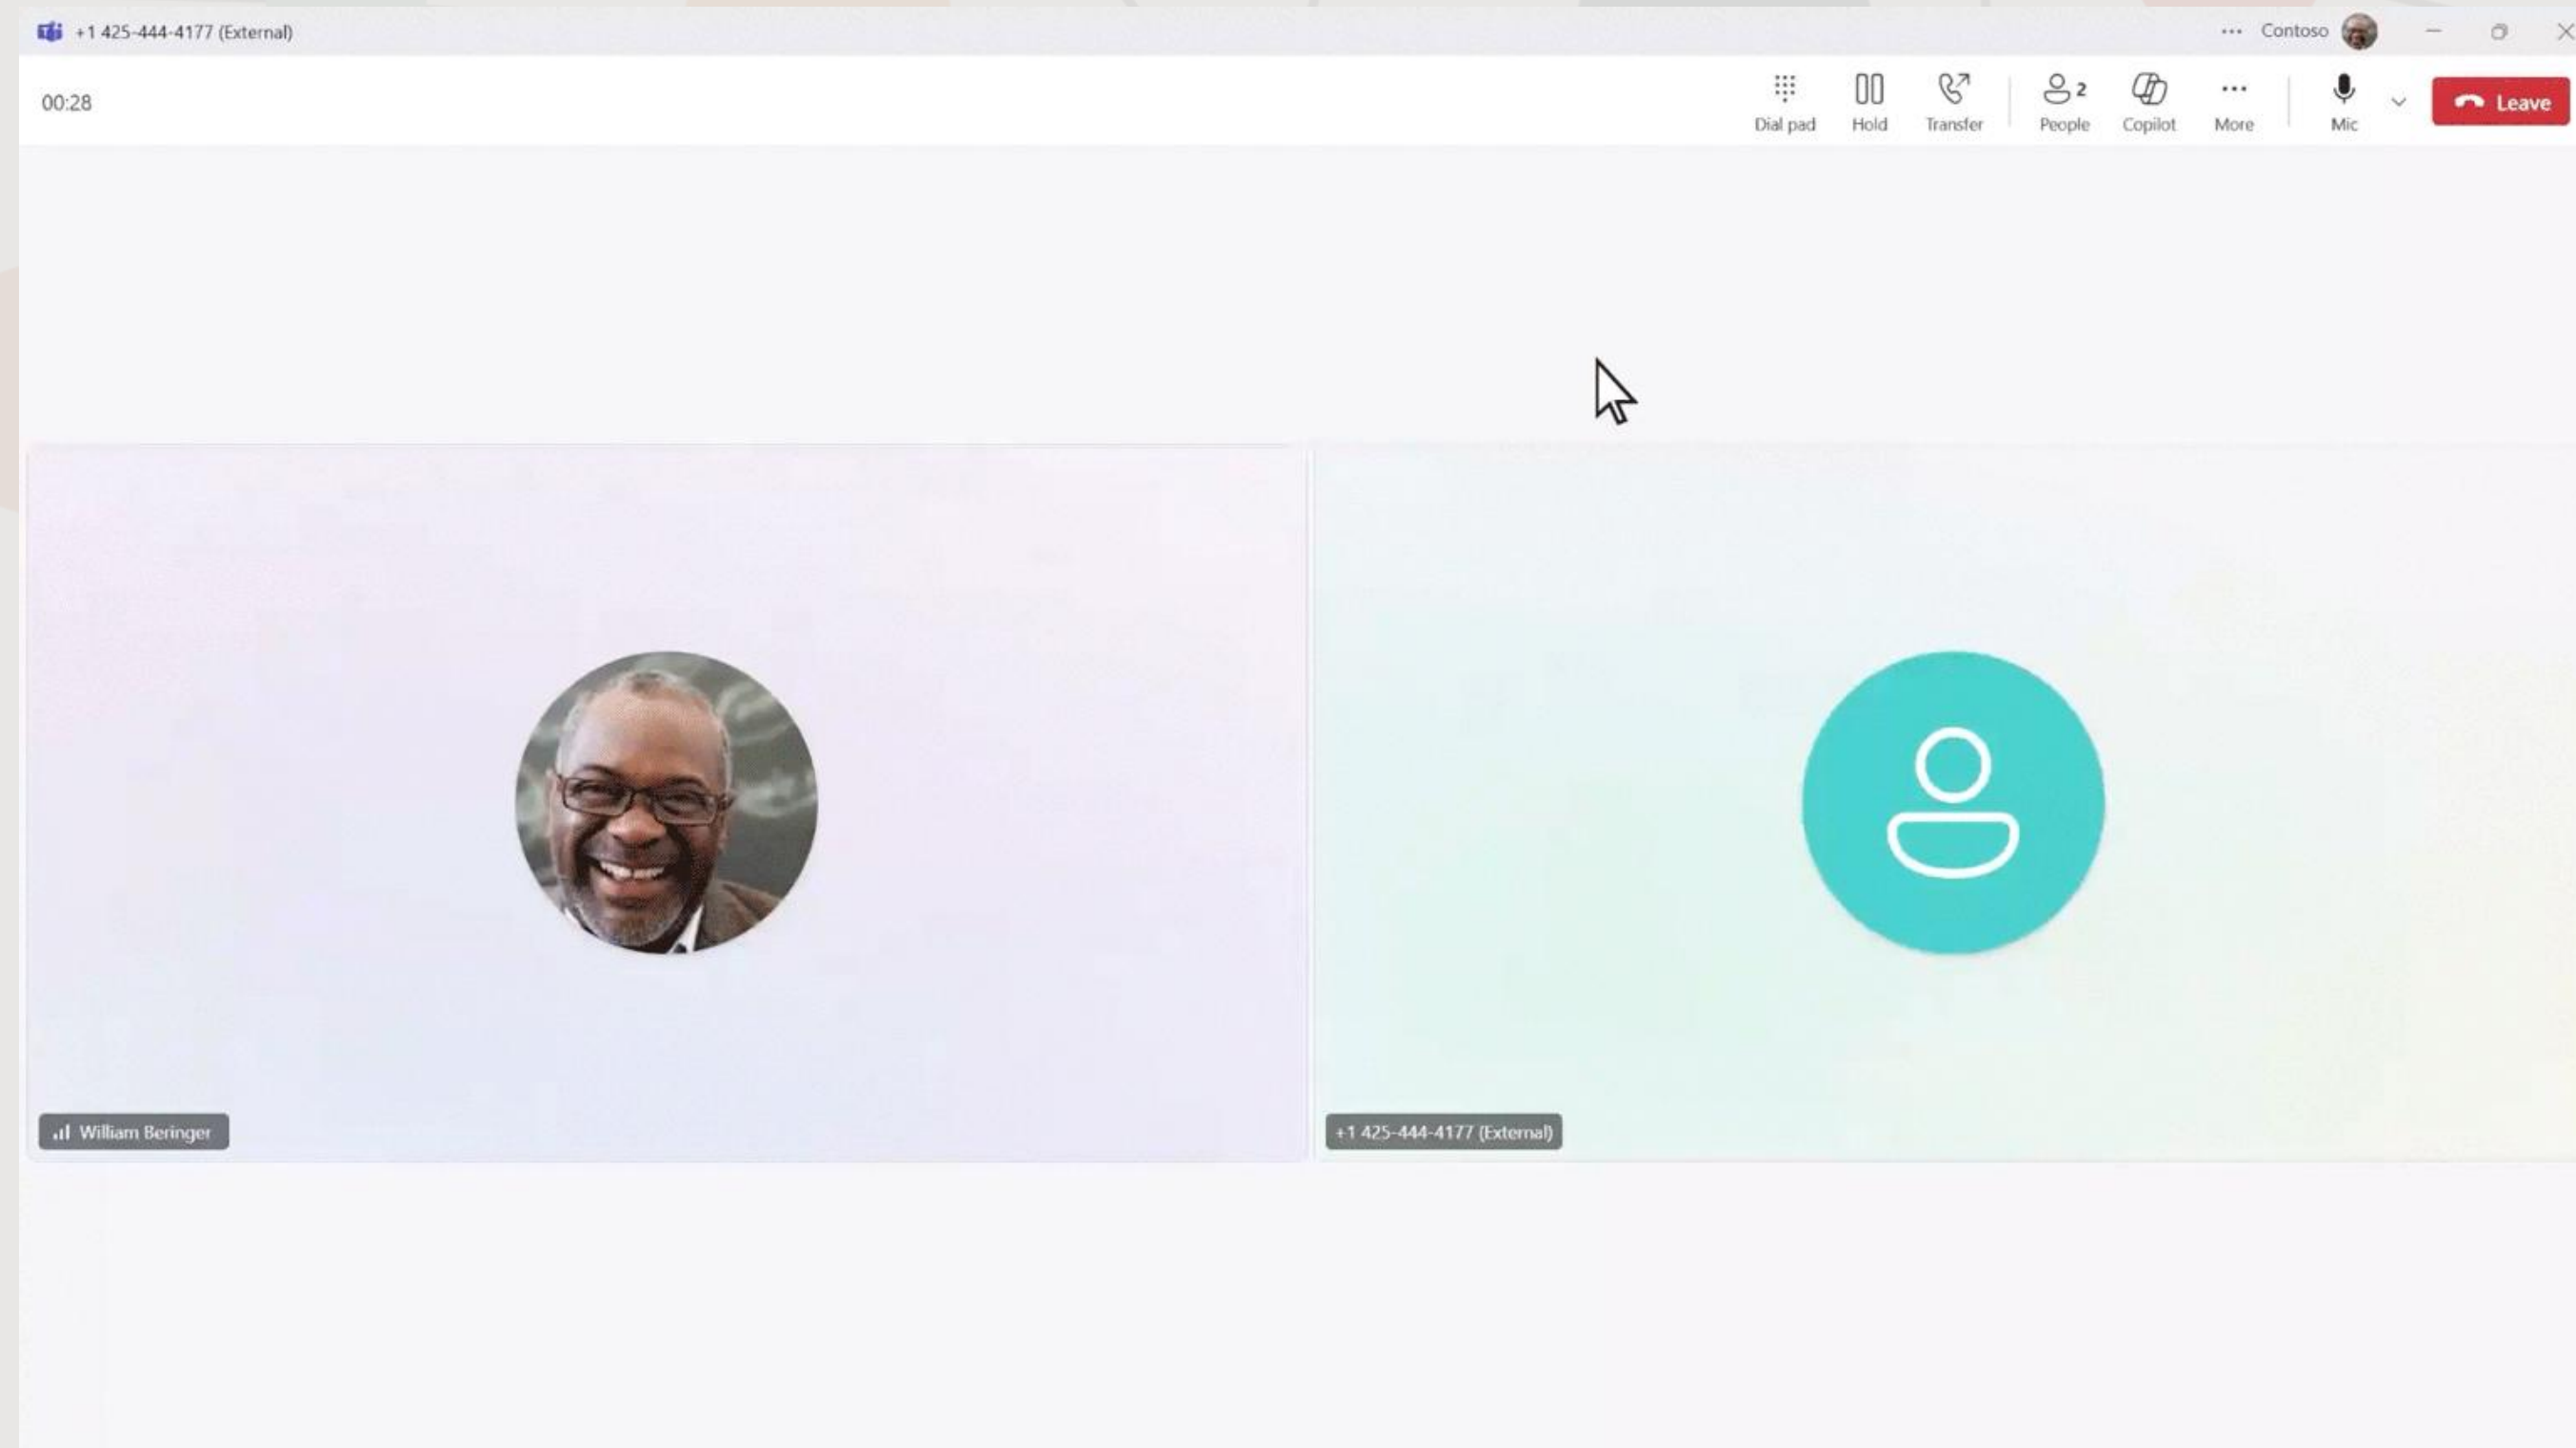

This new feature allows users to leverage Copilot's capabilities during live call sessions without retaining transcripts or an audio recording afterward.

This ensures that users can benefit from Copilot during sensitive conversations where a persistent record is not desired.

Once the admin has enabled this option, users can initiate Copilot without transcription or recording simply through clicking the Copilot button in the header menu.

Copilot in Teams Phone helps automate important administrative tasks of a call, such as capturing key points, task owners, and next steps, allowing users to stay focused on the content of the call.

Available now in public preview

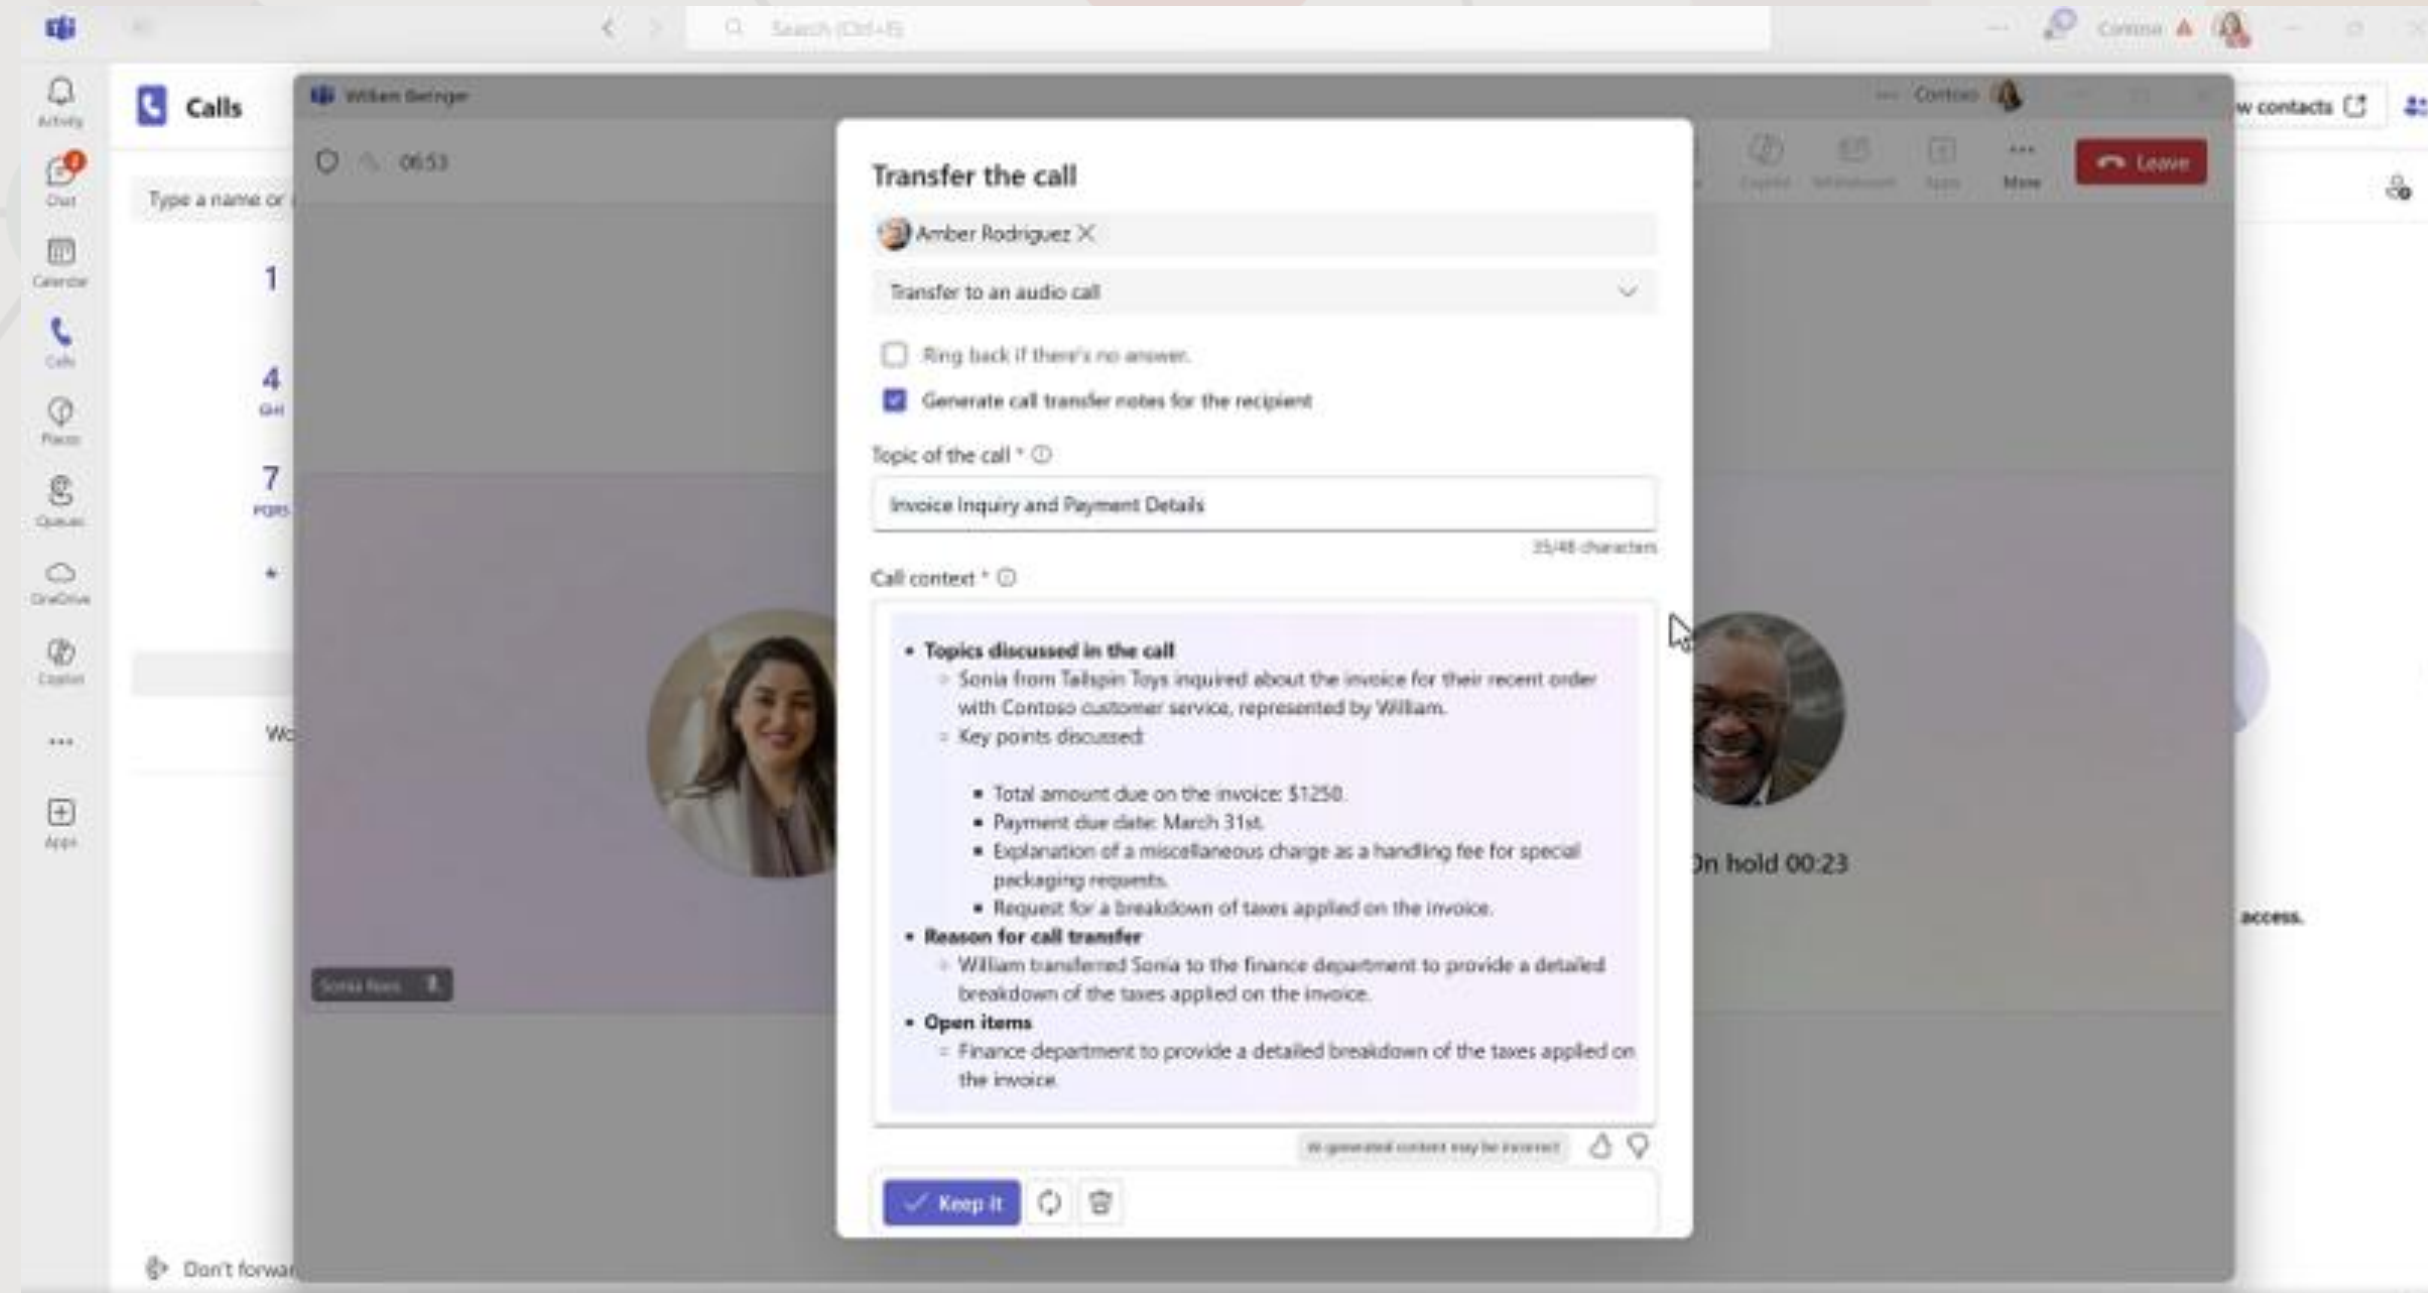

Copilot in Teams Phone: Copilot summary for transferred calls

Use AI to facilitate seamless call transfers. When a call is forwarded/transferred to another colleague, users can prompt Copilot to automatically create AI notes for the call as a briefing for the receiving colleague.

This feature ensures that the recipient is well-informed about the previous conversations related to the transferred call, enhancing their understanding and preparedness.

By providing this context, the Copilot summary helps streamline communication and reduce the need for repetitive explanations.

Copilot summary for transferred calls will also be supported for certified Teams Phone certified devices.

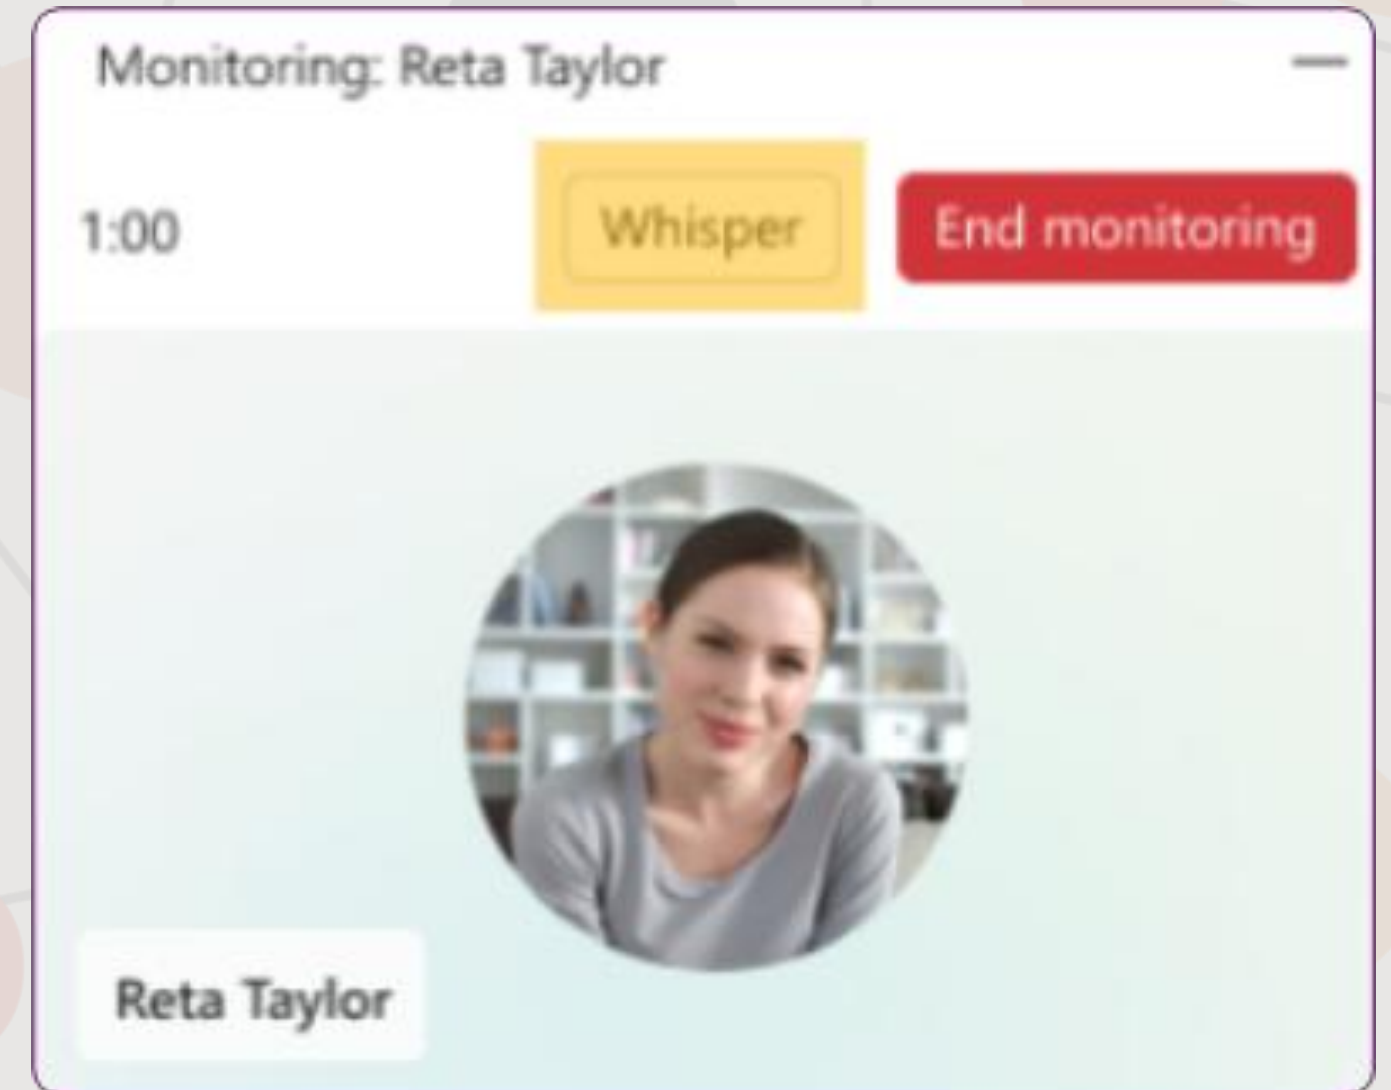

Available in public preview in April

Queues app: barge/whisper/monitor/takeover

The "Queues app: barge/whisper/monitor/takeover" feature in Teams Phone helps team leads and supervisors manage and train junior agents effectively.

This feature allows supervisors to:

- Monitor: Listen to the conversations their agents are having with callers without being heard.
- Whisper: Provide assistance to agents during a call without the caller hearing.
- Barge: Join a call in progress to assist both the agent and the caller.
- Takeover: Remove an agent from a call and take over the conversation, if necessary.

Available in public preview in April

Peripherals: Unified call control across multiple Bluetooth audio devices

When multiple peripheral devices are connected to Teams, the device used to answer a call will temporarily become the primary device that synchronizes with Teams for button functions.

Post-call, the original device selected in Teams Settings will resume its role.

Initially, this feature was exclusive to USB devices; however, it now extends to native Bluetooth devices.

Users can confidently operate multiple Bluetooth devices, ensuring correct call control functionality.

This feature is currently available on Windows, with MacOS support anticipated in the future.

Generally available now

Phone devices: Shared call history for call delegates

Call delegates can now have access to the call history of the delegator's shared line.

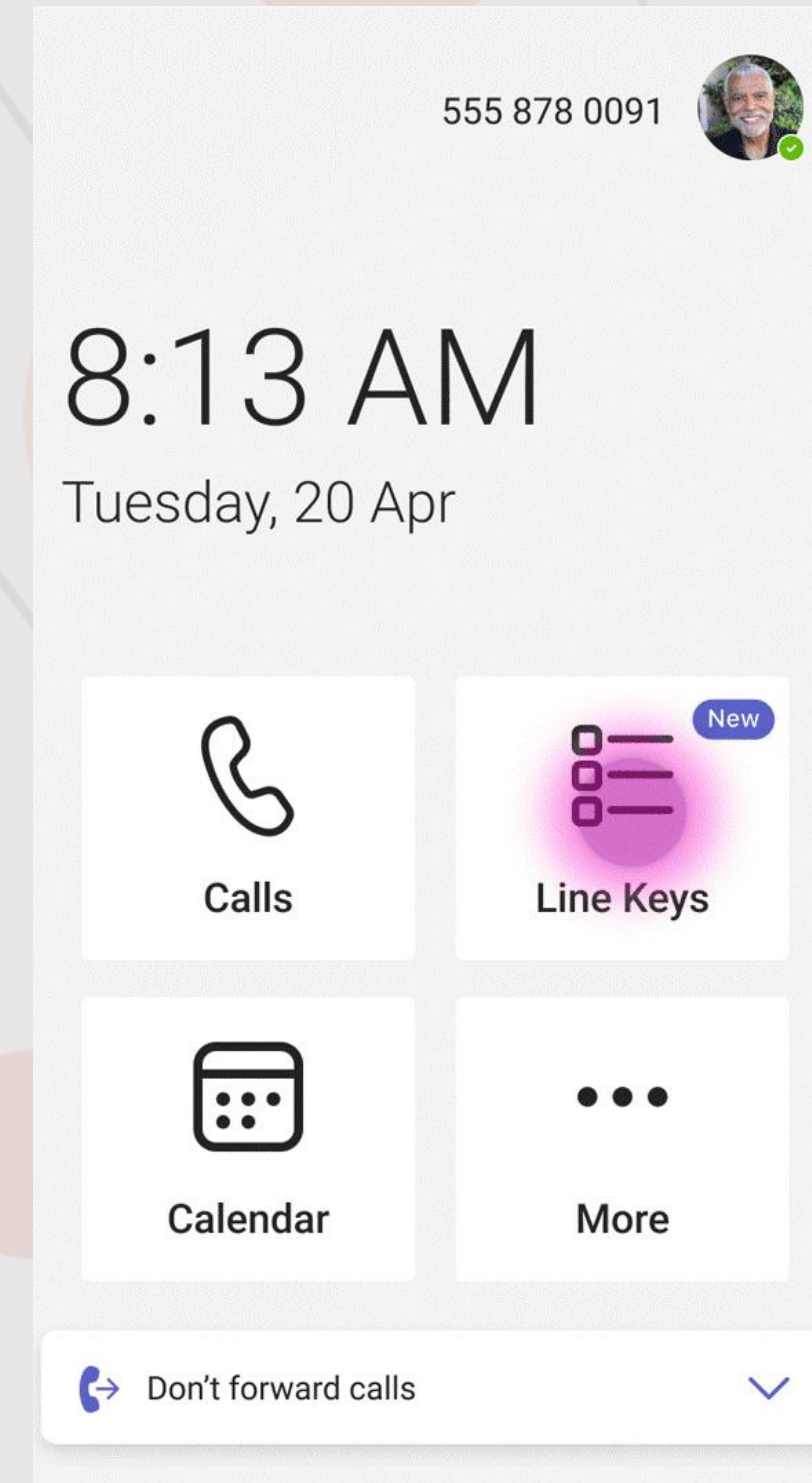

This feature allows delegates to view and manage calls made or received on behalf of the delegator, ensuring seamless communication and collaboration.

Generally available now

Phone devices: Line keys on phone devices with touch screens

Line keys allow you to set up custom contacts and speed dial on the line key buttons of your Teams-certified phone devices with touch screens. They enable one-touch dialing capabilities, making it easier to quickly access frequently dialed contacts and improve productivity.

Available in public preview in April

PSTN call extensibility: Generally available now

PSTN Call Extensibility in Microsoft Teams allows third-party application developers to extend the PSTN calling experience with contextual information.

Third-party apps can open within the calling interface, allowing end-users to access customer contact information during calls, streamline workflows, and improve customer interaction.

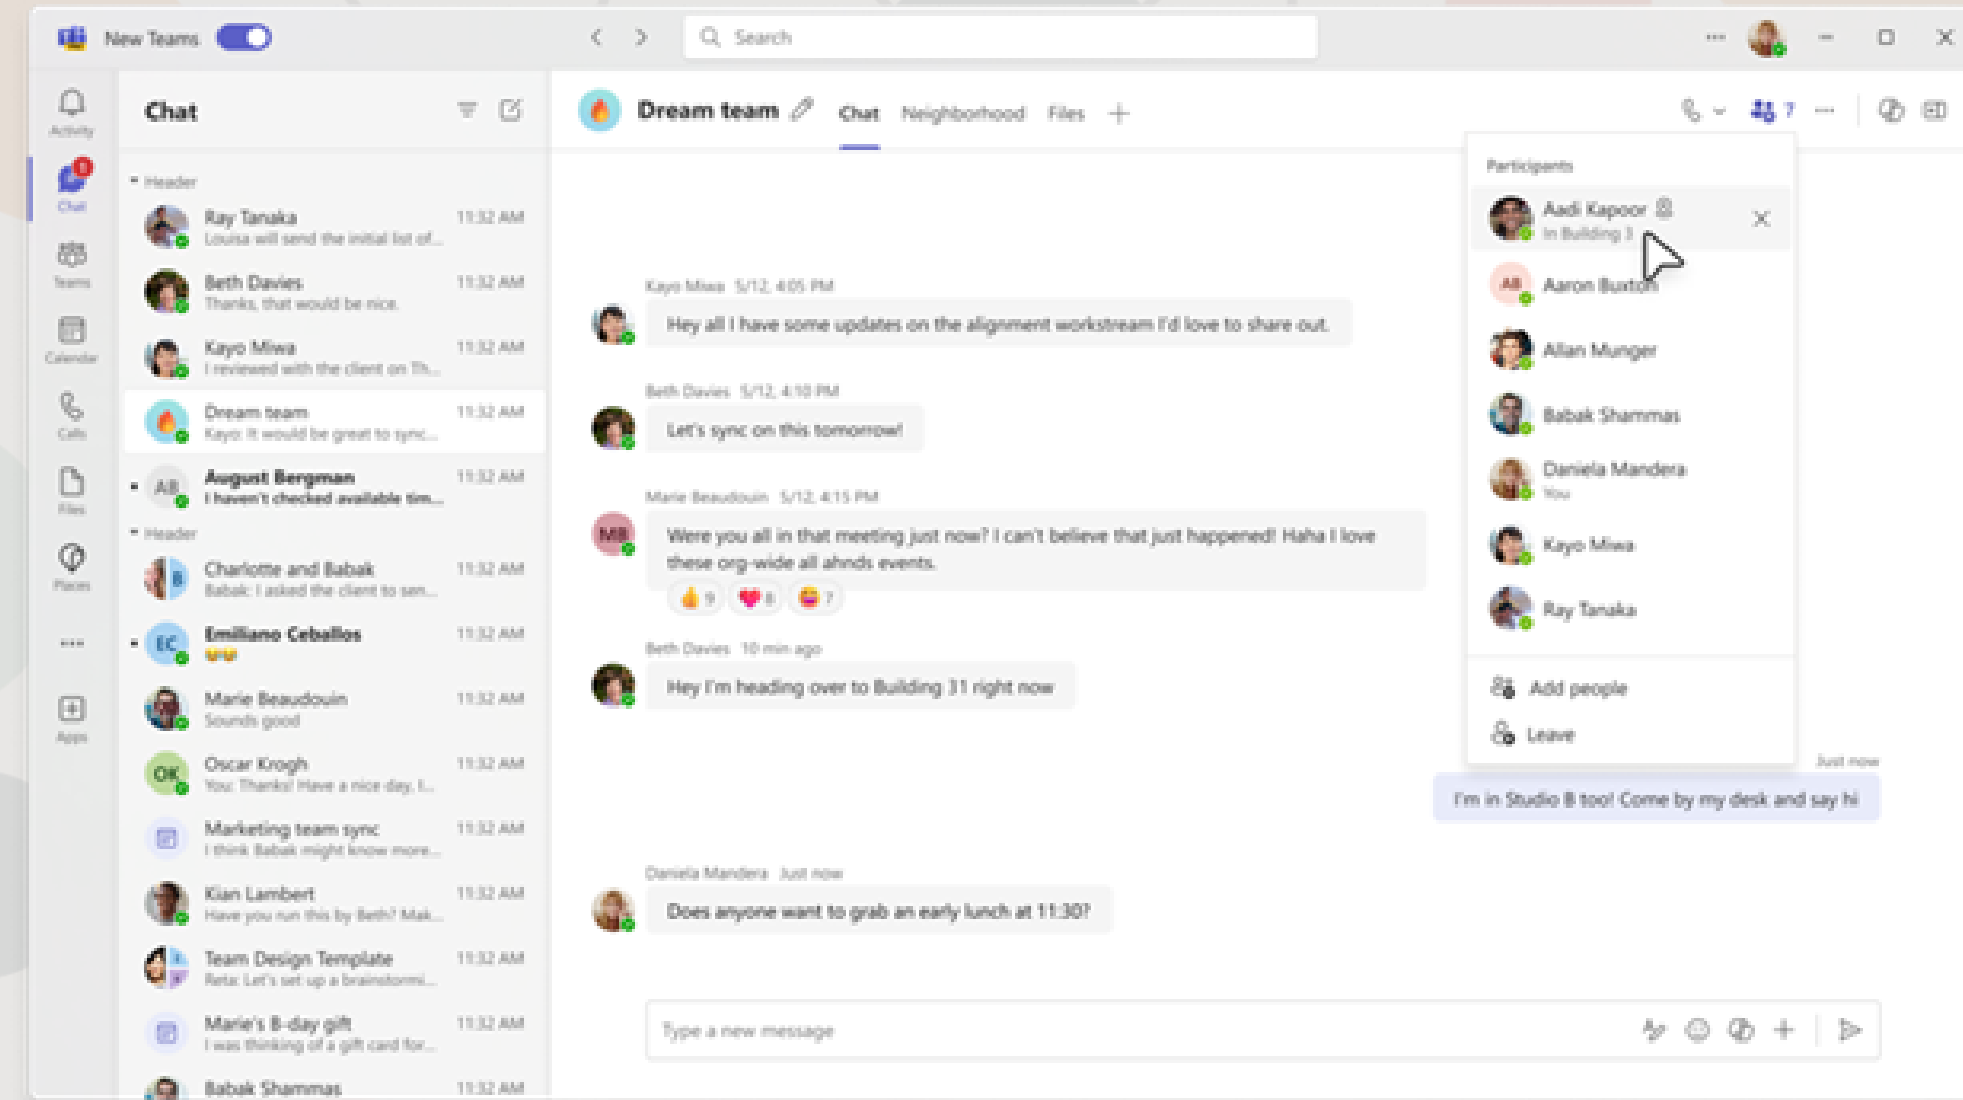

Generally available now

Auto-update workplace presence with Wi-Fi: Public preview in April

A user's work location can automatically be updated to "office" when their device connects to the onsite corporate Wi-Fi.

This feature helps colleagues easily see who is in the office, facilitating in-person connections and collaboration, and enables [chat @nearby](#).

Public preview in April

Facilitator agent support in Teams Rooms

The Facilitator agent support in Teams Rooms (Windows and Android) provides real-time AI-generated notes and action items during both scheduled hybrid and impromptu in-person meetings.

The Facilitator agent appears in the notes panel for hybrid meetings and can be activated via a QR code for in-person meetings, enhancing collaboration and productivity for all.

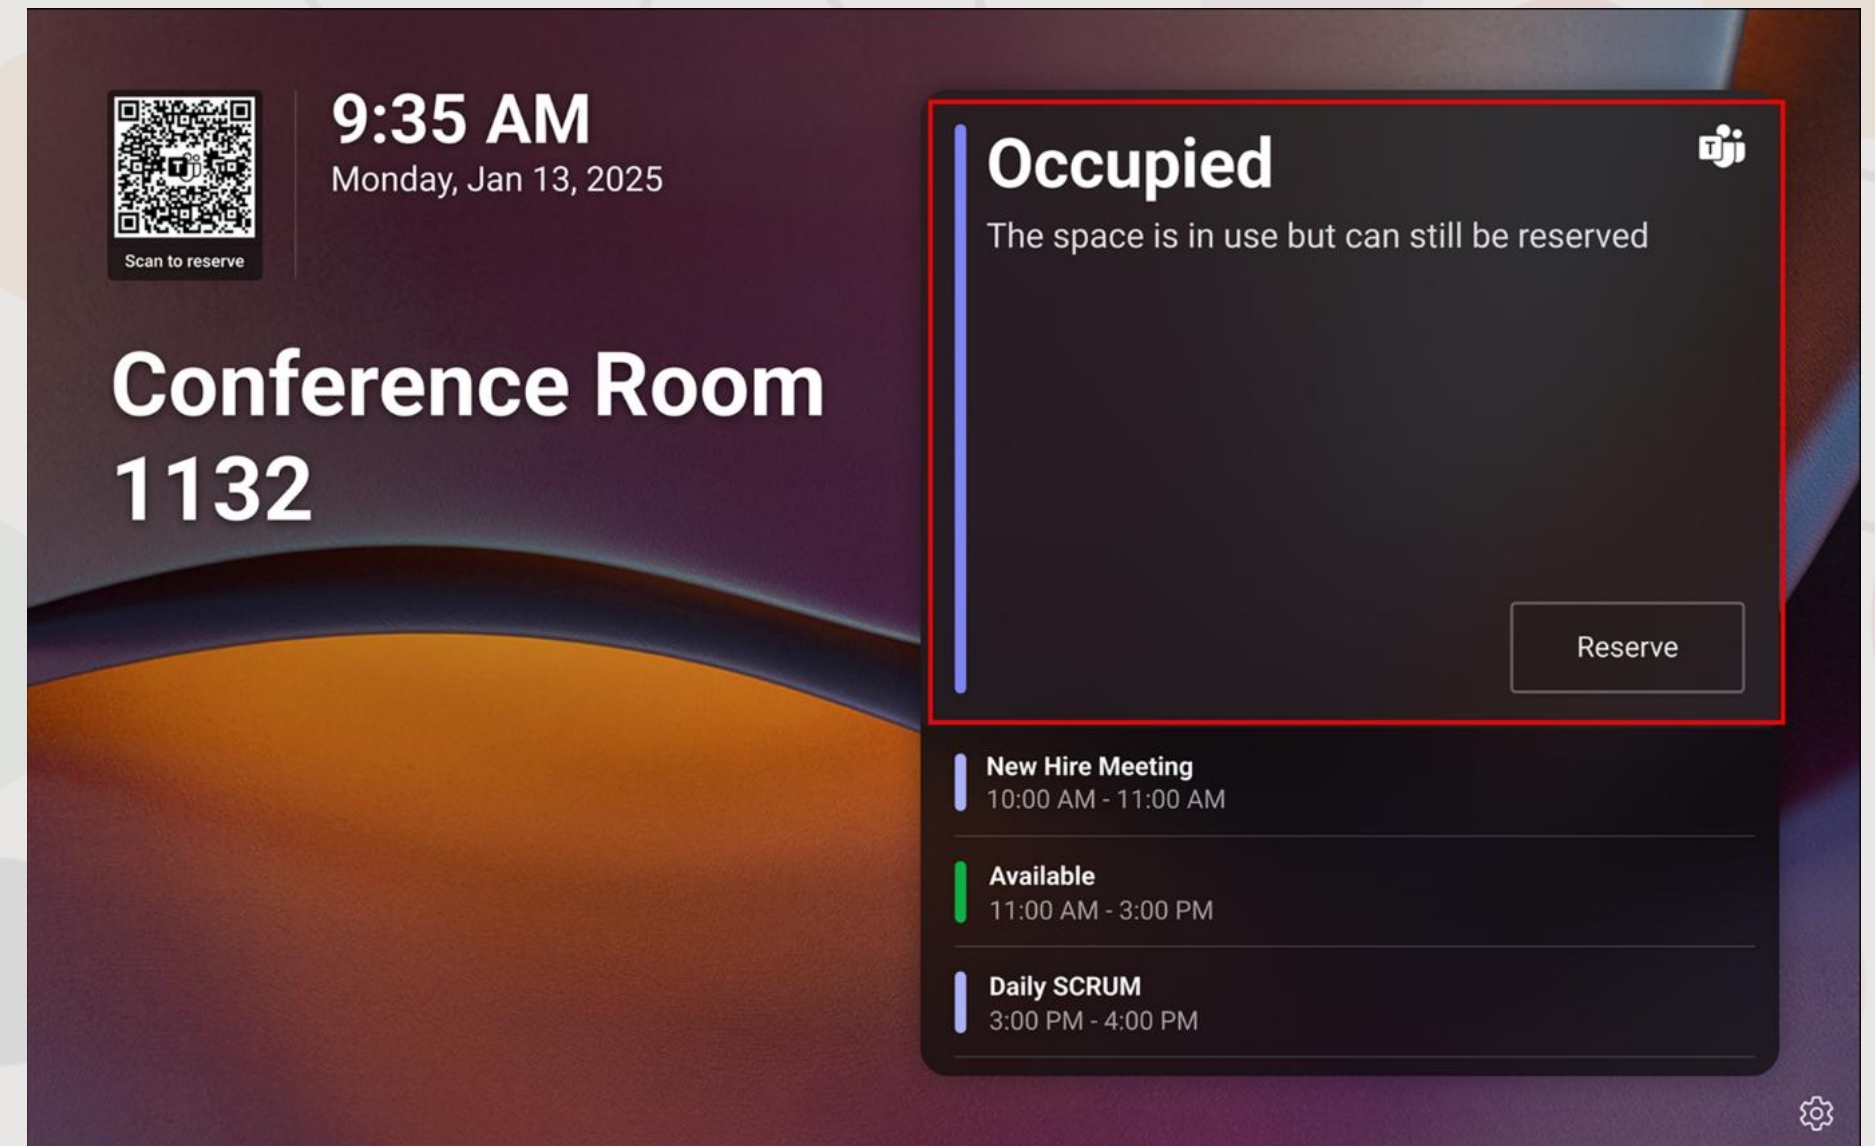

public preview available early next quarter

Occupancy status on Teams panels

Teams panels can now smartly utilize signals from Teams Rooms devices (Windows or Android) or occupancy sensors paired with panels to indicate when a room is in use (e.g., LED glow), so you're not surprised to find an available room is actually occupied

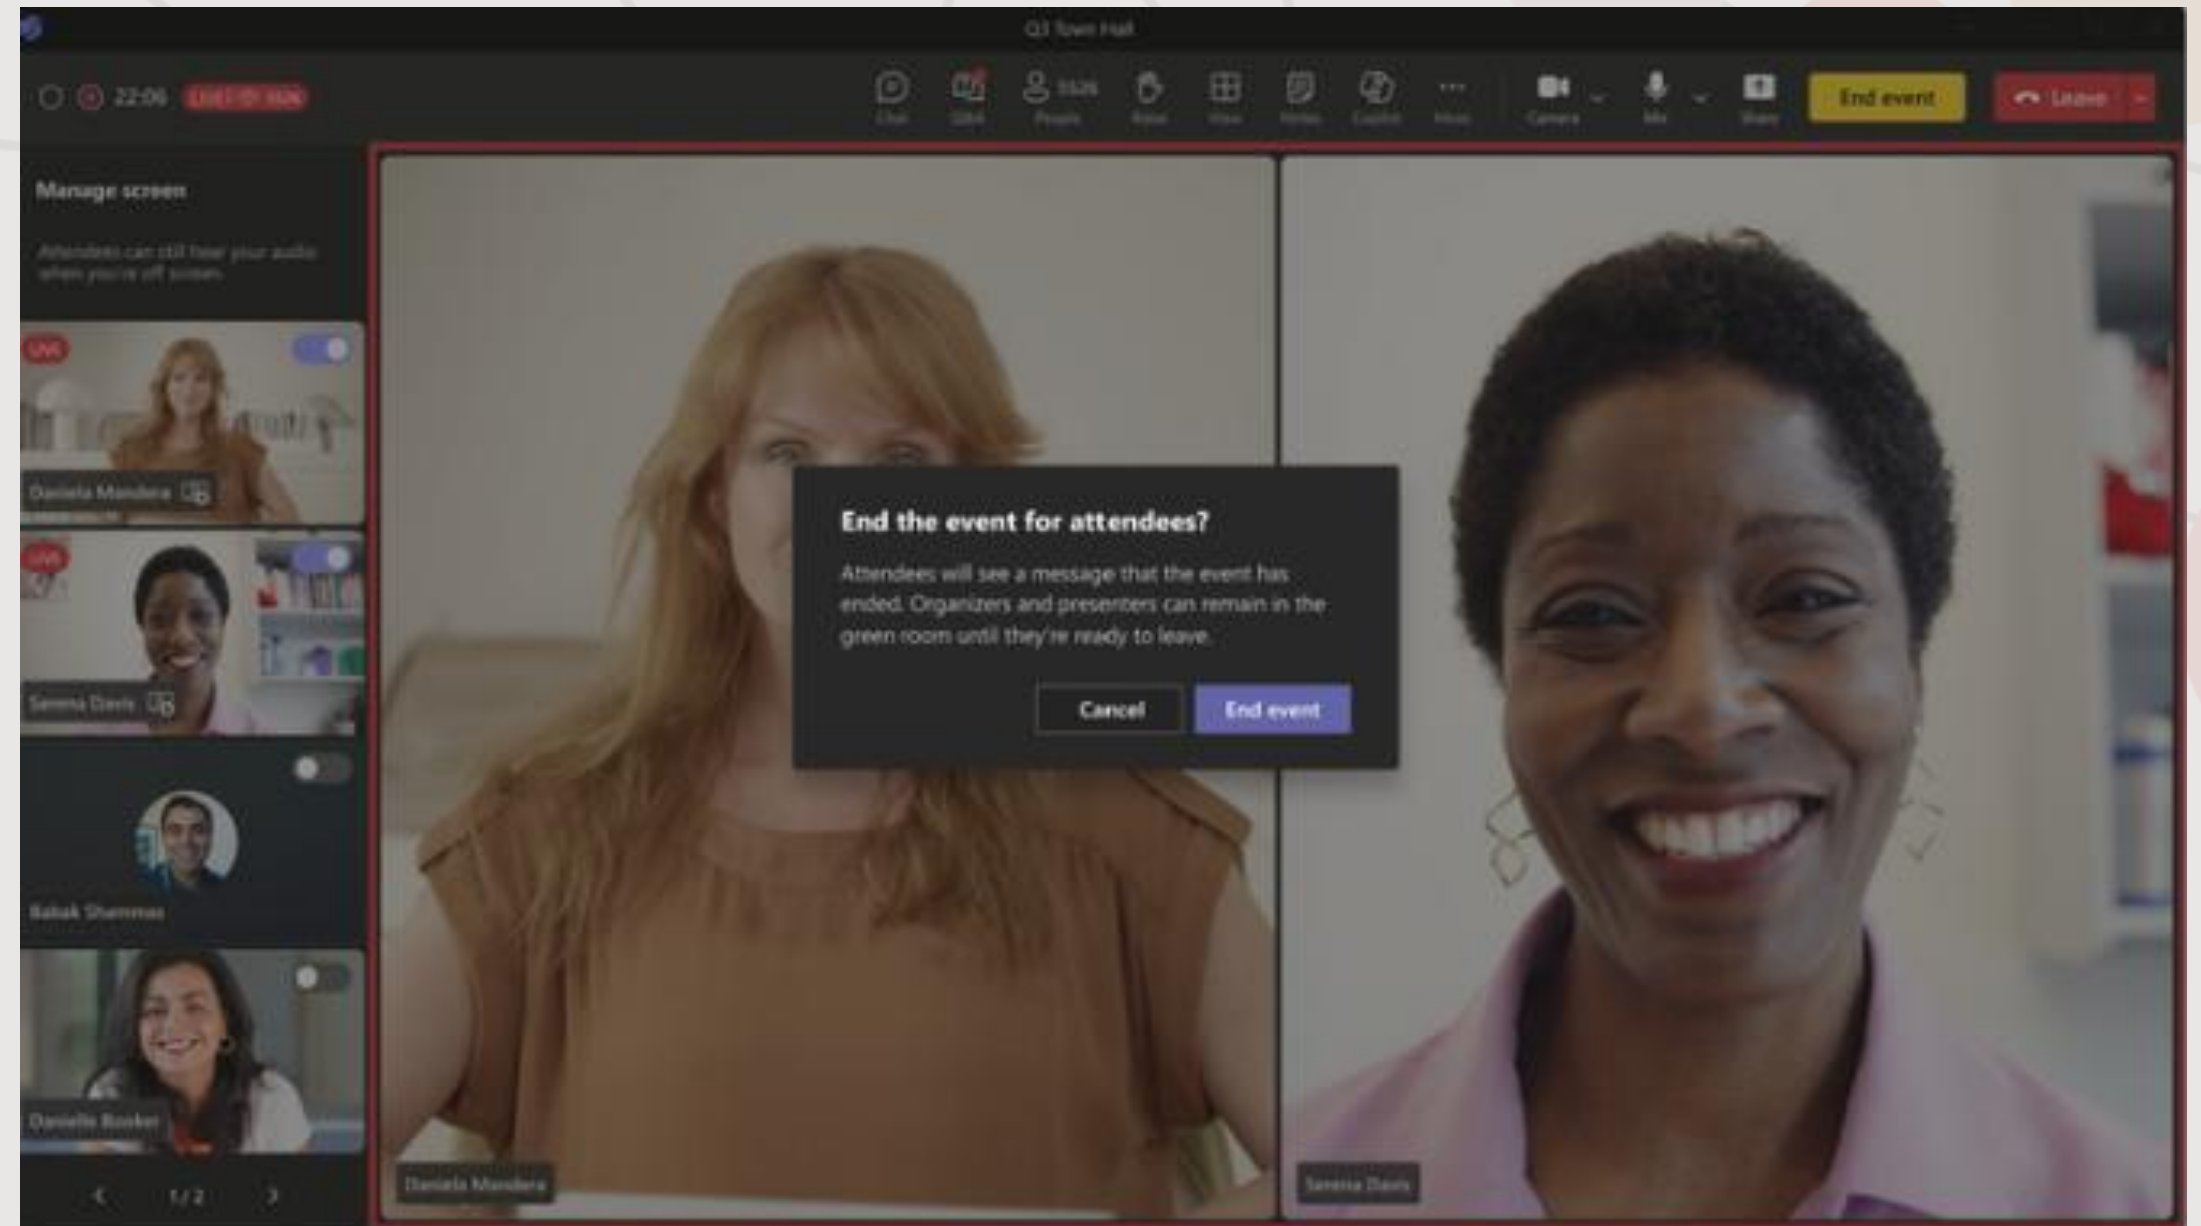

public preview available early next quarter

End the Session for attendees and presenters return to green room

Organizers and presenters can now end the session with this new "End Event" button for town halls, webinars, and structured meetings.

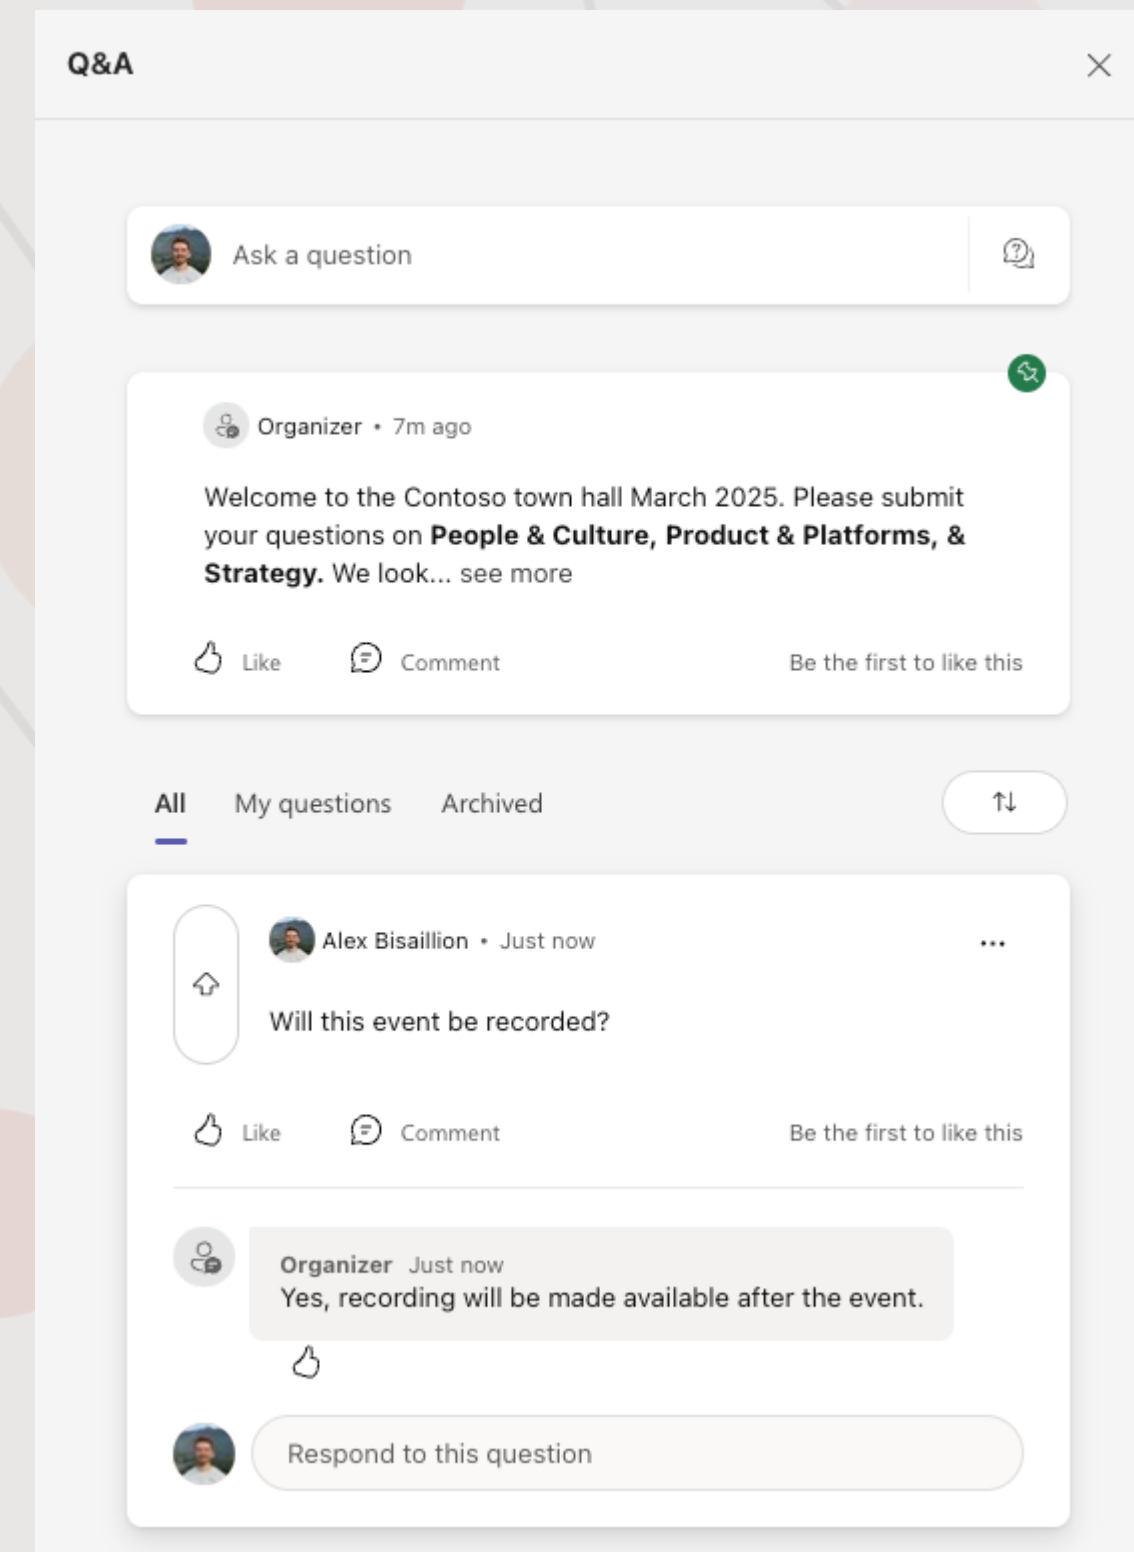

After selecting this button, attendees will see a message on stage stating that the session has concluded, and presenters will return to the Green Room.

Post and reply to questions as an organizer: Generally available in early 2025 (Q2)

Town hall and webinar organizers now have the ability to post and reply to questions using the title “organizer” in the Q&A experience, instead of their individual names.

This feature allows instance organizers to present a unified and official voice when responding to attendee questions.

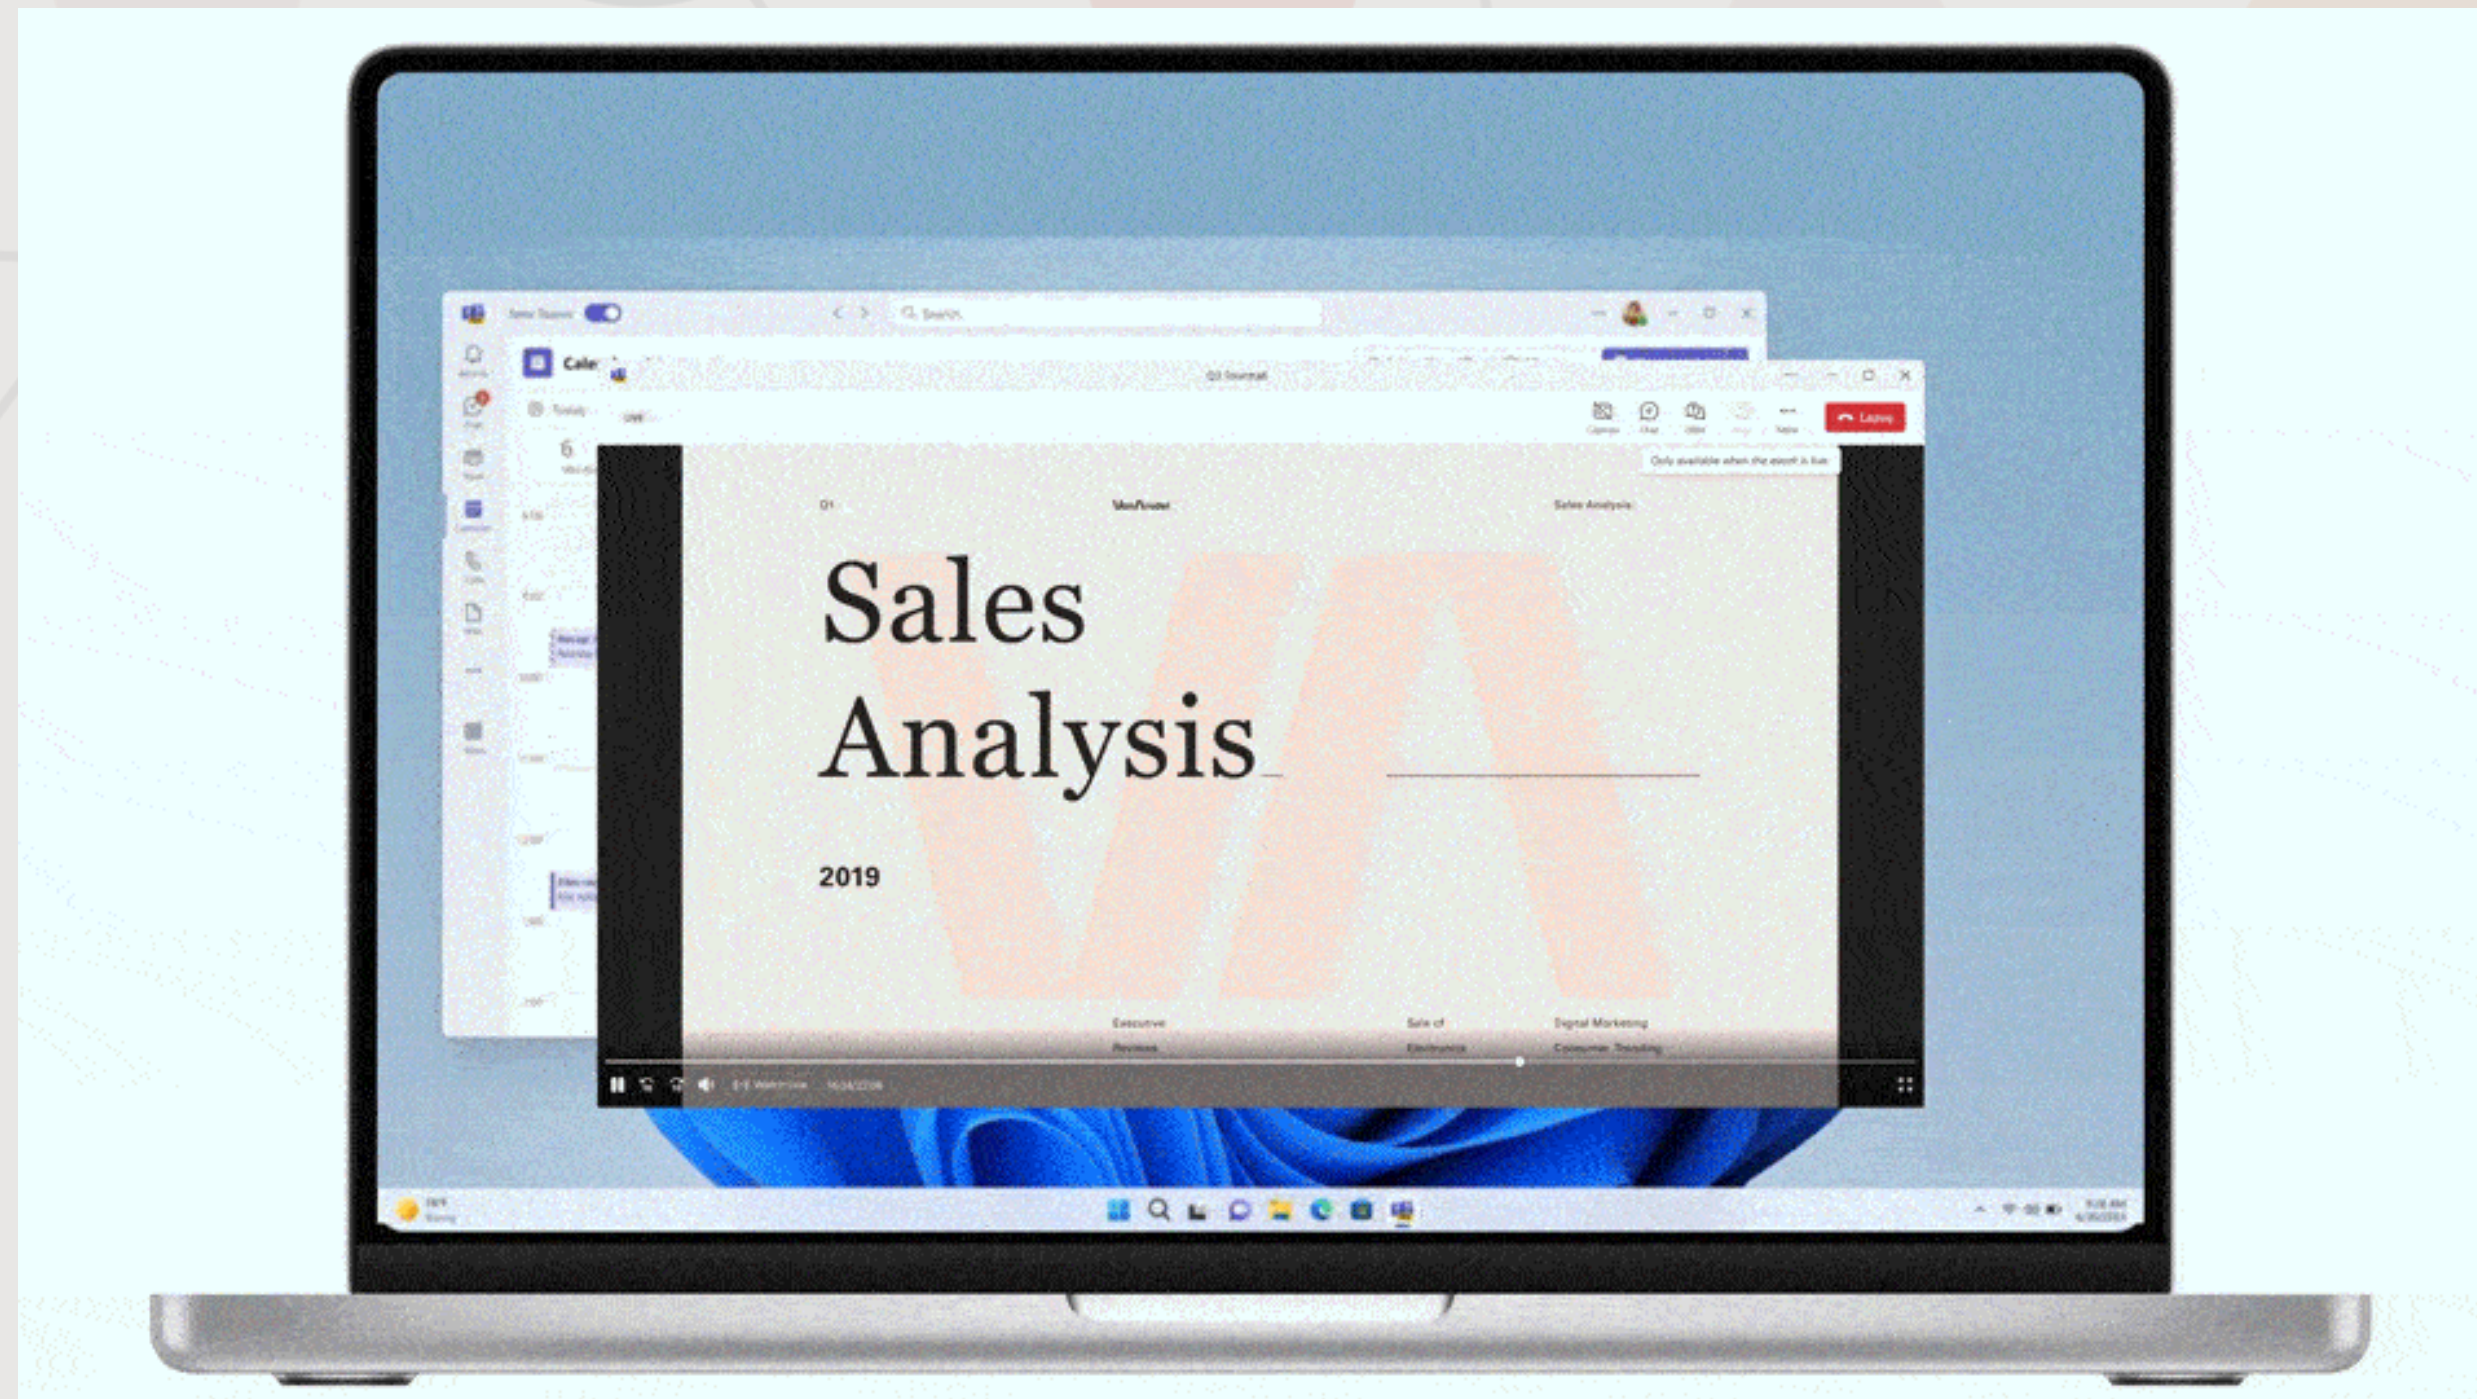

DVR Support for Town hall: Generally available in April

Digital Video Recording (DVR) functionality in town halls now enables event attendees to interact with an instance of a live streaming town hall instance in the same way they would a recorded piece of content, when viewing via desktop or web.

This makes it easier to digest the content being presented, giving viewers the ability to pause and move forward or back within a town hall, navigate to any previously-streamed timestamp, and interact in other ways that make viewing a town hall more convenient.

This feature is available for all town halls regardless of license assigned to the organizers.

<https://techcommunity.microsoft.com/blog/microsoftteamsblog/microsoft-teams-at-enterprise-connect-2025-leading-the-future-of-collaboration/4393733>

Ability to separate out the Townhall attendee invites

Organizers can now maintain separate invites for Townhall attendees, distinct from the events crew.

This feature helps manage large-scale events more efficiently by ensuring that only intended participants receive the necessary information

<https://techcommunity.microsoft.com/blog/microsoftteamsblog/microsoft-teams-at-enterprise-connect-2025-leading-the-future-of-collaboration/4393733>

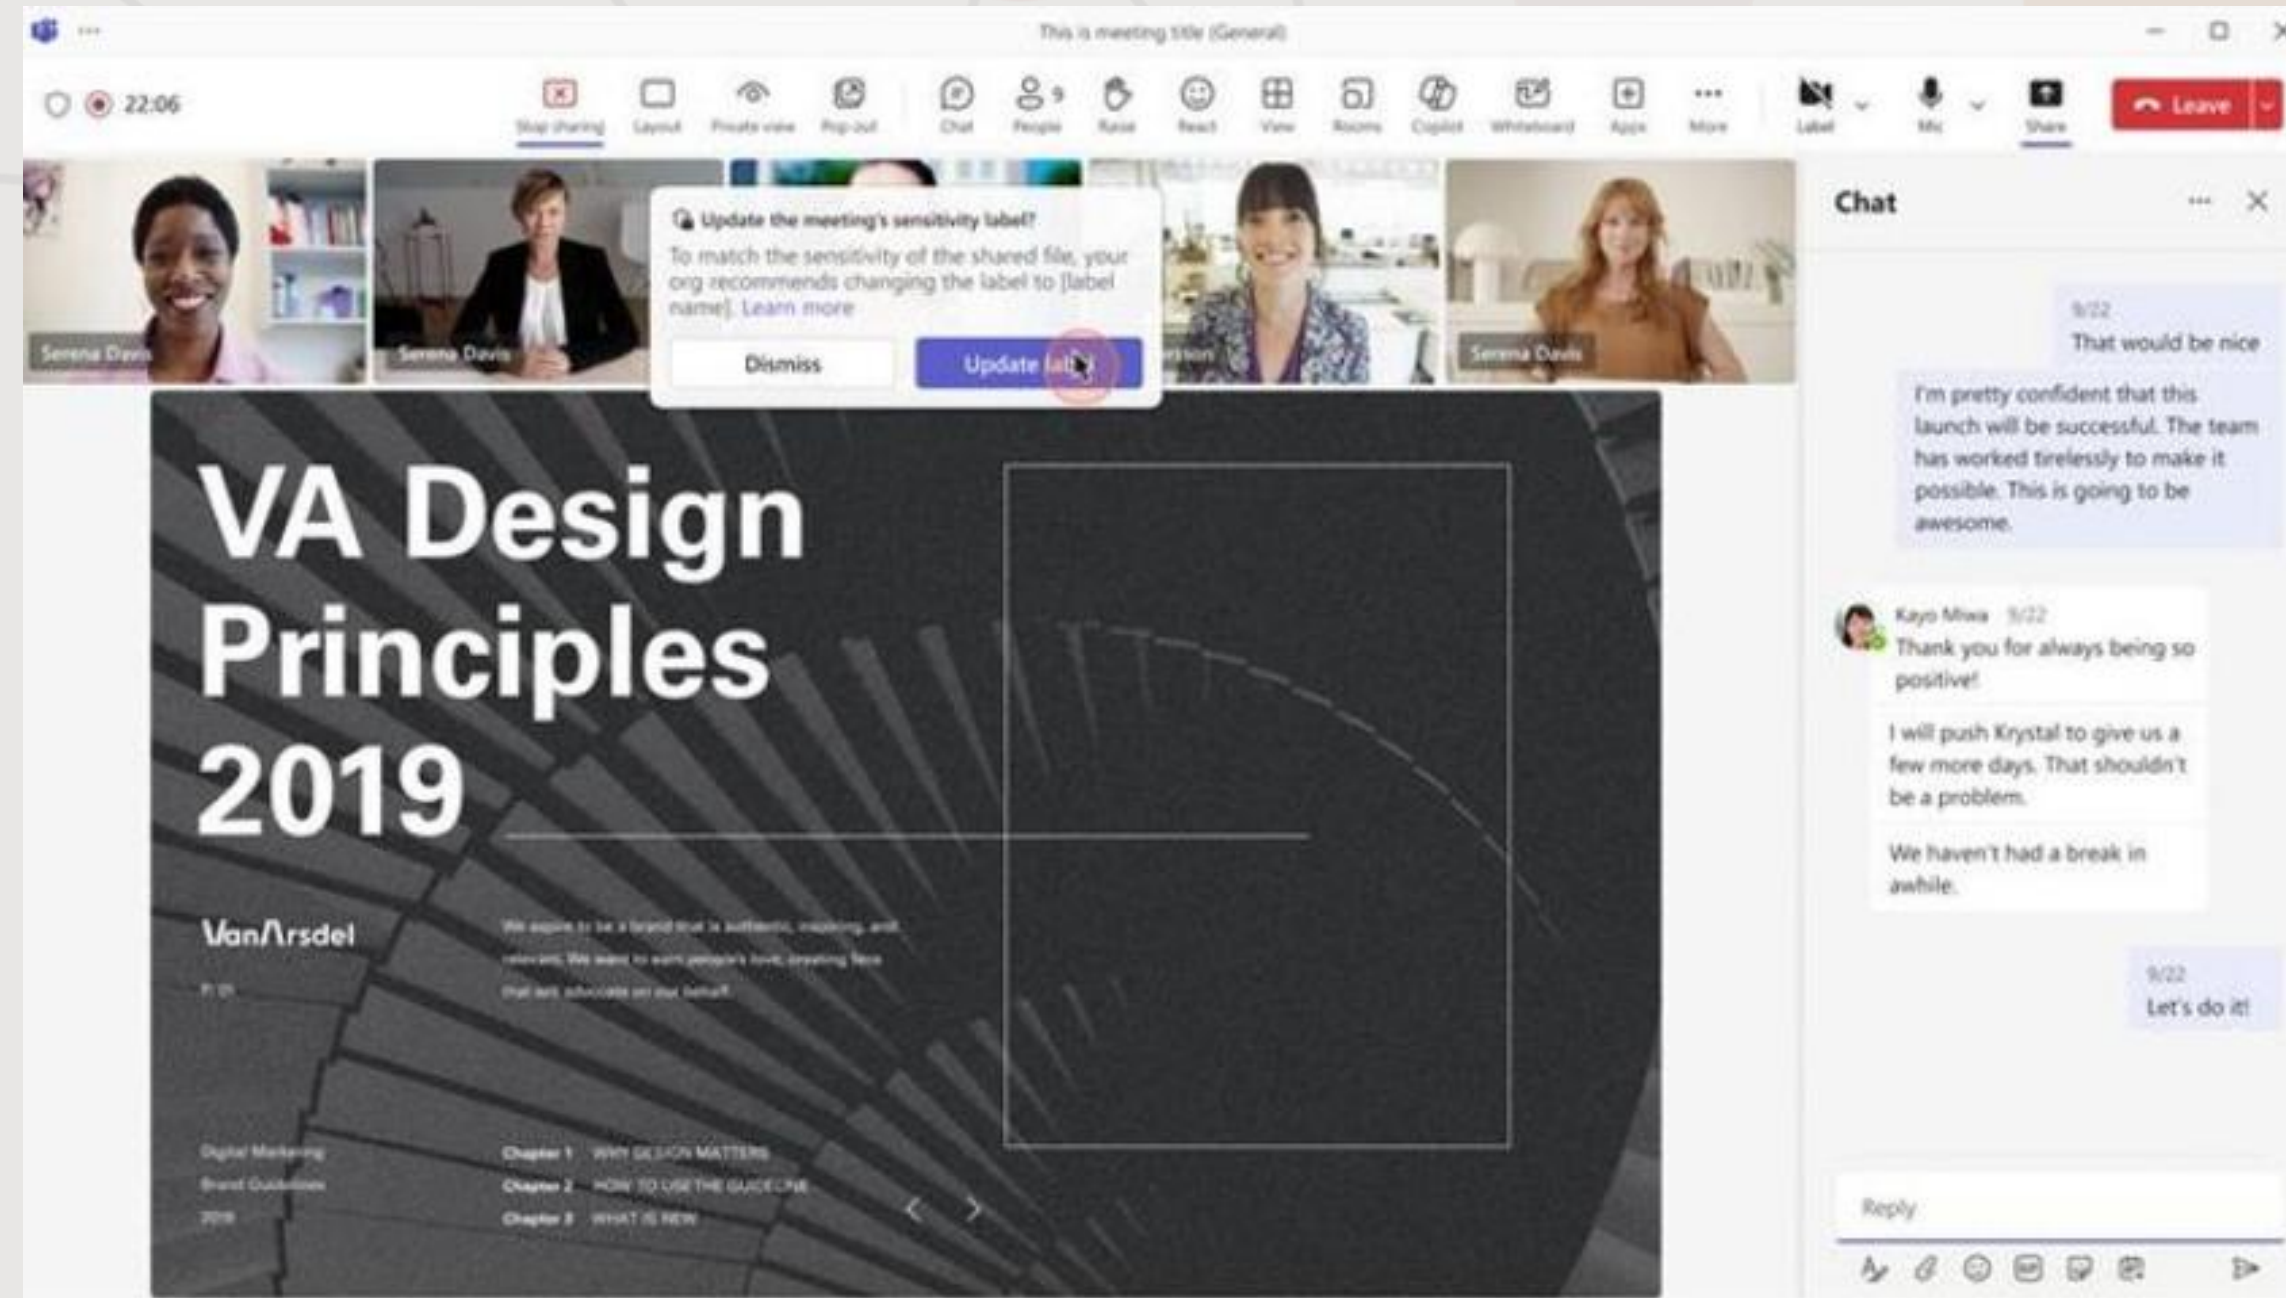

Auto-upgrade meeting protection based on shared file: sensitivity label inheritance [Premium]

Now Microsoft Teams can automatically upgrade the sensitivity level of a meeting based on the sensitivity of files shared during the meeting.

When an attendee shares a file with a higher sensitivity label, the meeting's protection settings are enhanced to match the file's sensitivity.

This feature helps ensure that sensitive information is adequately protected throughout the meeting.

It requires an Microsoft 365 E5 and Teams Premium license with Purview enabled.

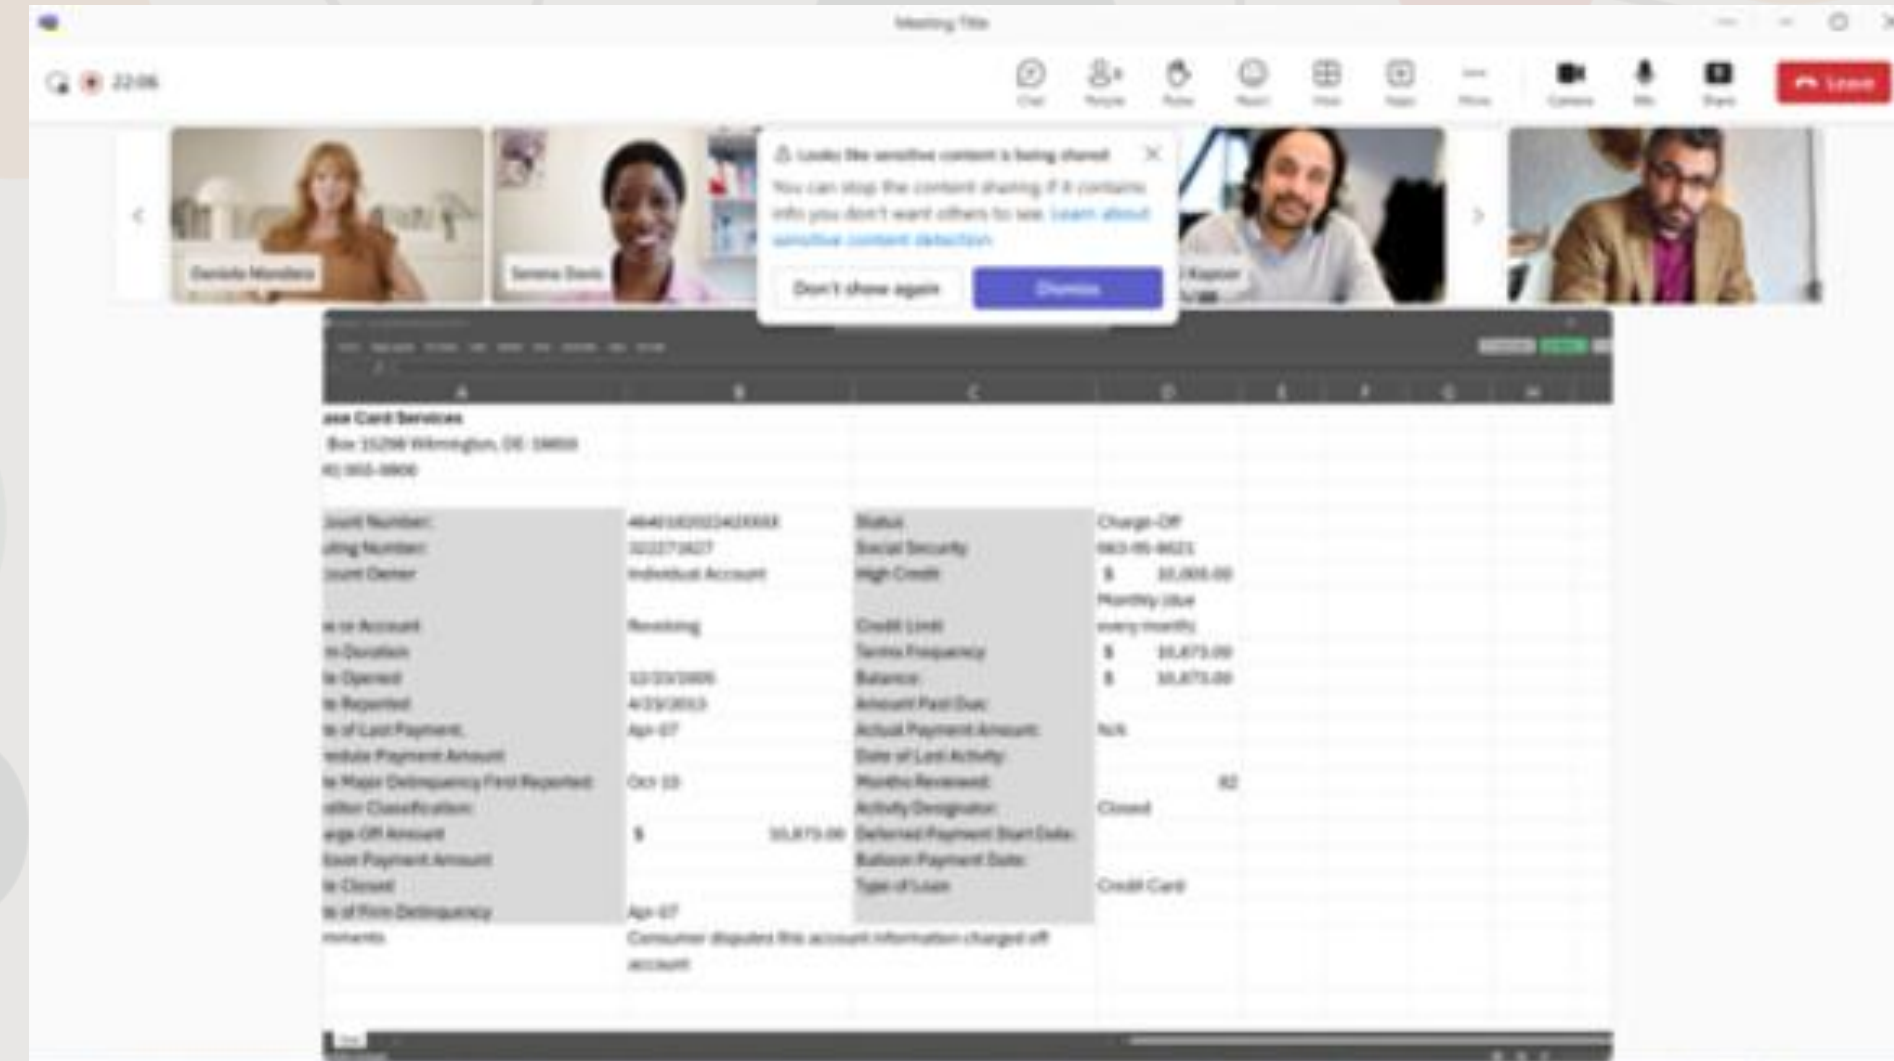

Active meeting protection: detect sensitive content while screensharing and notify [Premium]

This new feature enhances security during meetings by using AI to automatically detect potentially sensitive information, such as social security numbers and credit card numbers, **during screen sharing**.

When such content is detected, the feature alerts both the presenter and the meeting organizer to prevent unintentional sharing.

This helps mitigate the risk of exposing sensitive information and ensures a more secure and private meeting experience. This feature is available to meeting organizers who have Teams Premium.

All other participants in a meeting can benefit from this feature while in a meeting, however this feature is enabled when the meeting is scheduled by the meeting organizer.

ADMIN IMPACT NEW FEATURE
USER IMPACT

Microsoft Bookings will introduce a new Queue functionality for Teams Premium users, providing real-time management of appointments.

Queue is a powerful feature that provides real-time visibility and control over incoming appointments.

Queue provides schedulers and admins with a consolidated view of each day's appointments in chronological order for the booking pages they manage, so they can better manage the load of incoming appointments and reassign delayed appointments to available staff.

Staff can also self-serve on busy days by assigning the unassigned appointments to themselves, helping to balance workloads across teams or specific services.

Users can send SMS and email reminders from the queue view and keep customers informed, helping to enhance overall transparency and ensure a smooth appointment experience for everyone involved.

The rollout will begin mid-April 2025 and complete by late April 2025. No admin action is required, but users need a Teams Premium license to access this feature.

ⓘ Important

The Virtual Appointments app in Microsoft Teams won't be available after June 30, 2025. After this date, users can no longer access the Virtual Appointments app.

To schedule and manage appointments, users can use Microsoft Bookings. As part of Microsoft 365, Microsoft Bookings is an online scheduling tool that enables users to create customizable booking pages where customers, clients, and colleagues can easily schedule appointments.

- For advanced scheduling features in Microsoft Bookings, like SMS notifications and the queue for scheduled appointments ([available in early 2025](#) ⓘ), users also need a Teams Premium license, same as they would today.
- On-demand appointments, the queue for on-demand appointments, client-side analytics, and Microsoft Forms, which are currently part of the Virtual Appointments app, won't be available in Microsoft Bookings.

For existing Virtual Appointment app users, we recommend using Microsoft Bookings, licensed through a Microsoft 365 subscription plan, together with a Teams Premium license for a more comprehensive solution.

To prepare for this upcoming change, notify your users, update relevant documentation as appropriate, and share details on Microsoft Bookings.
