Advanced deployment guide for Conditional Access Policy templates

Microsoft Entra's latest guide helps admins:

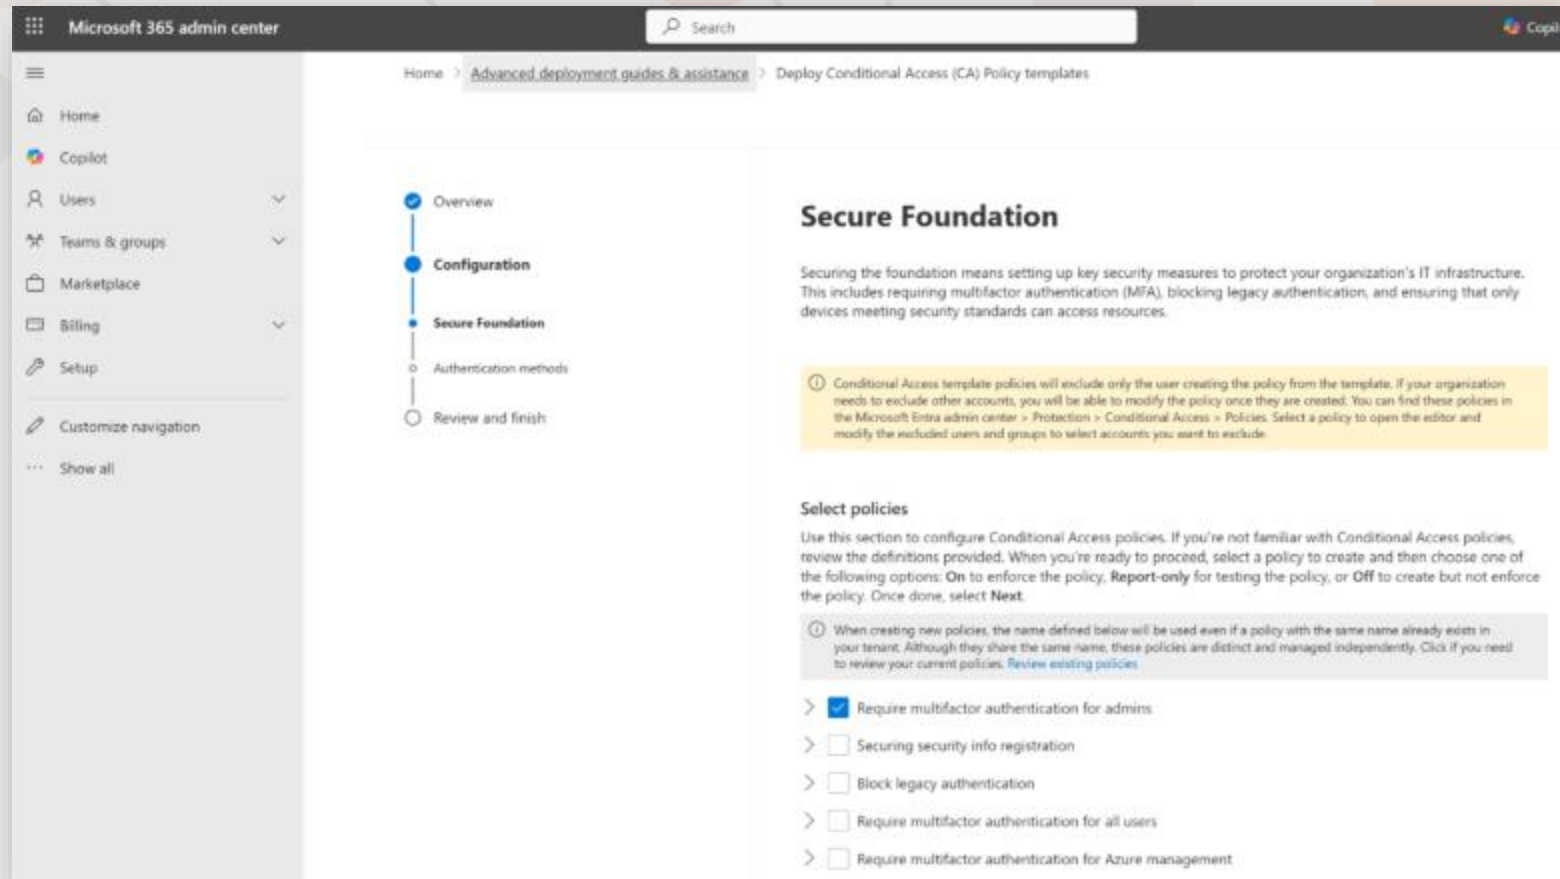

Deploy multiple Conditional Access policies using templates

These templates are aligned with different security pillars so you can choose and implement the right level of protection for your organization.

Enforce key policies that:

- Require multi-factor authentication (MFA)
- Block legacy authentication
- Safeguard remote work access
- Protect admin accounts with phishing-resistant MFA
- Mitigate identity-based threats with Risk-Based Conditional Access (RBCA) policies

Configure authentication methods in Entra ID based on your organization's security requirements.

New PDF compression feature for SharePoint and OneDrive

Users will be able to use the new Compress feature to reduce the file sizes of PDFs stored on Microsoft OneDrive for the web or Microsoft SharePoint.

It offers three levels of image compression.

All use lossy compression and chroma subsampling to reduce file sizes while maintaining visual quality.

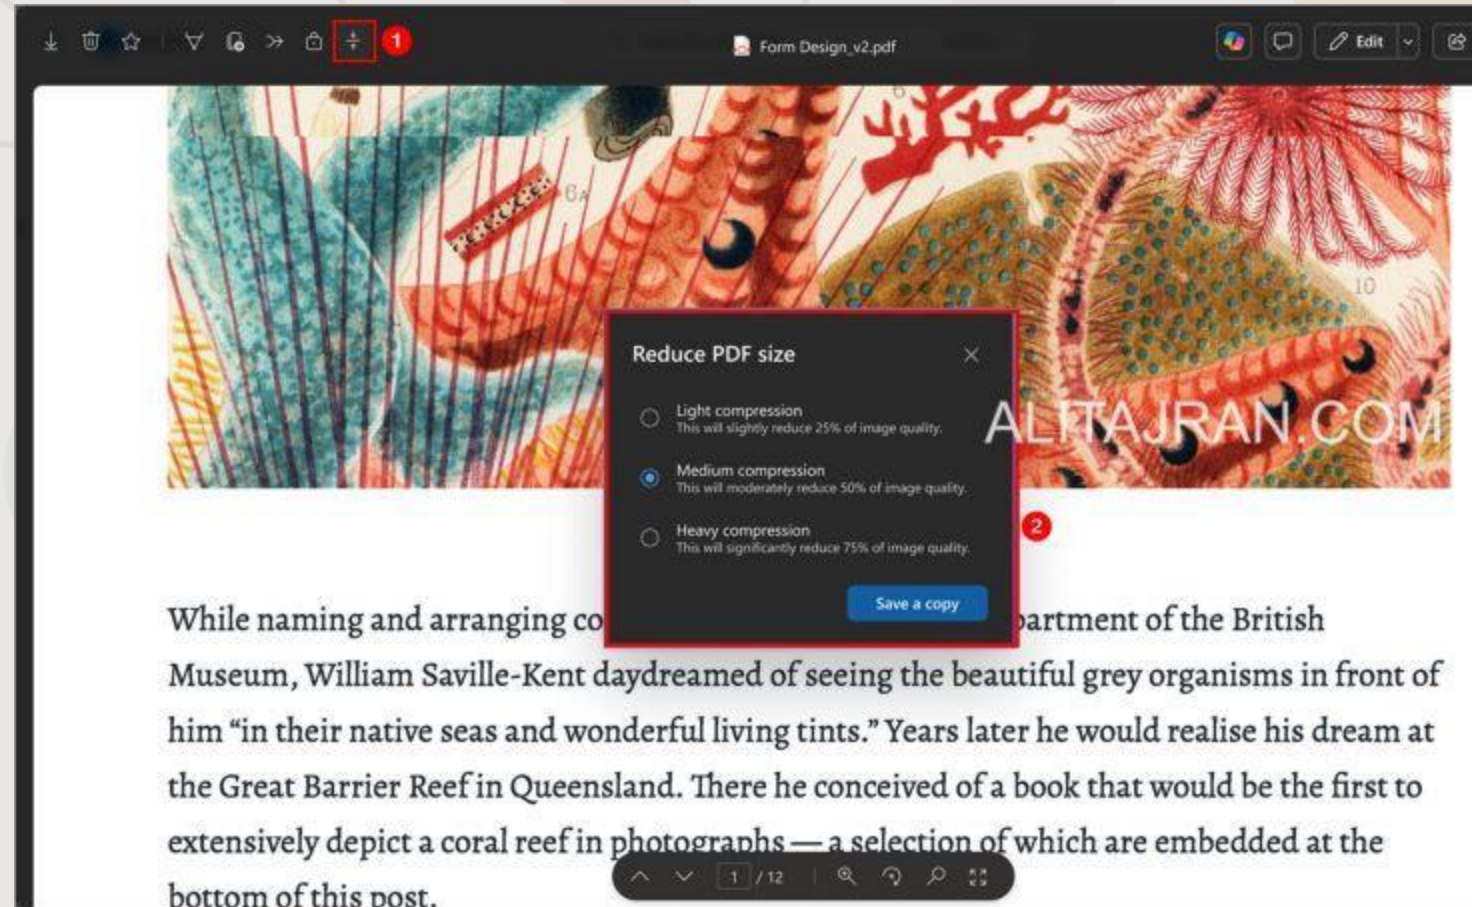

The options are:

- Light compression: Apply 4:2:0 color subsampling and reduce 25% of image pixels
- Medium compression: Apply 4:2:0 color subsampling and reduce 50% of image pixels
- Heavy compression: Apply 4:2:0 color subsampling and reduce 75% of image pixels.

Users can compress one PDF at a time

The original file must be smaller than 300 MB.

Source: <https://www.alitajran.com/>

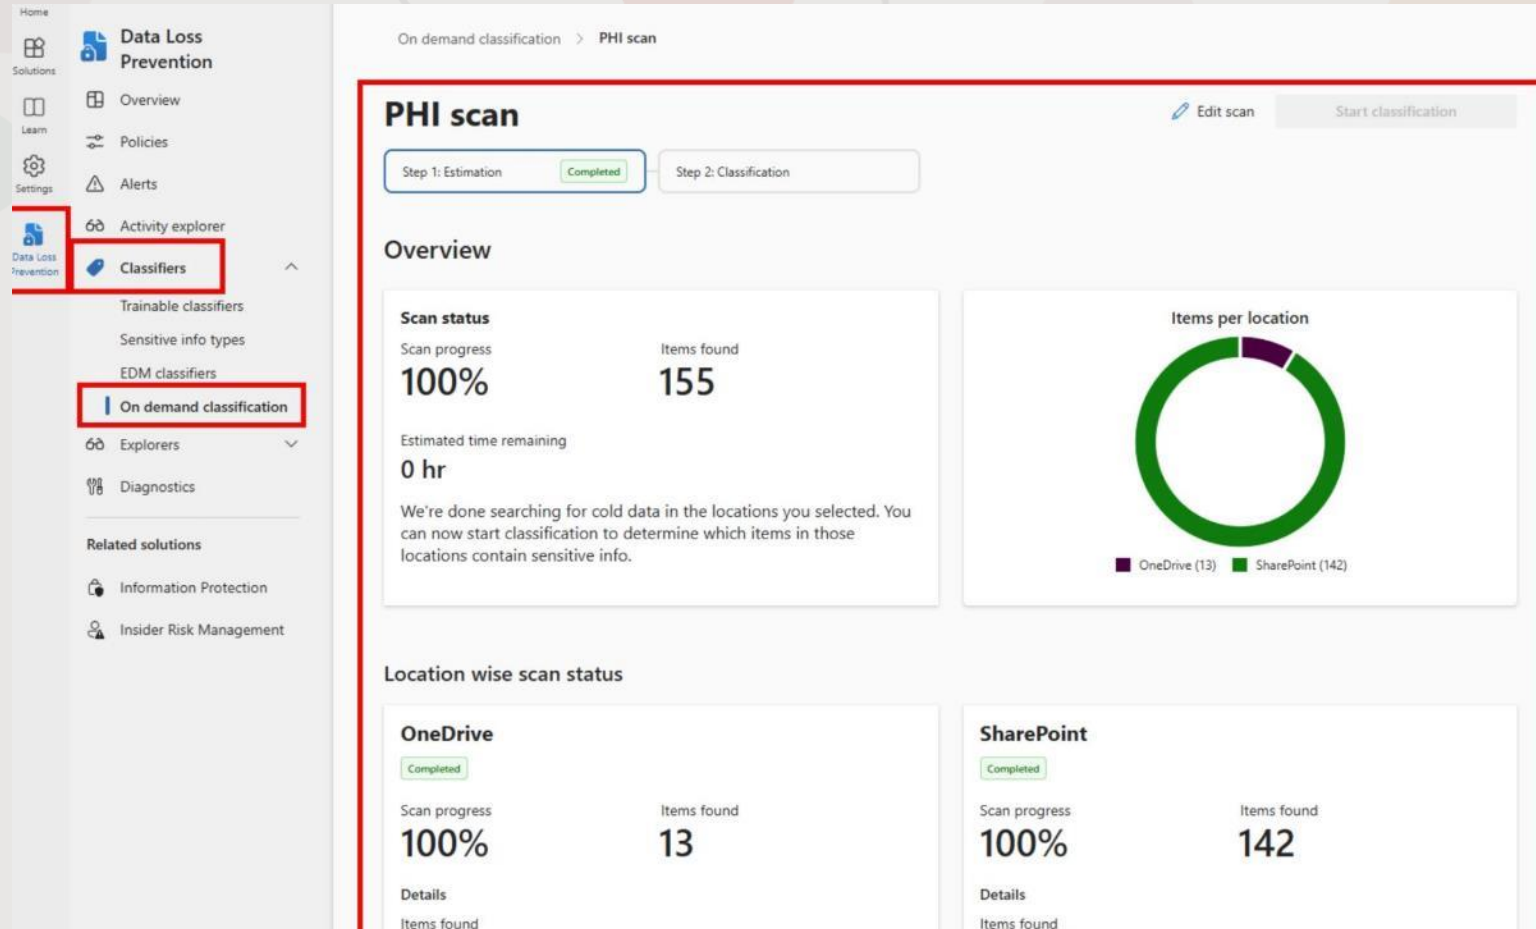

Purview: On-demand classification (preview)

Identify and classify sensitive information in your historical data, ensuring your organization's data is always protected.

Retroactively discover and classify sensitive content if there have been updates or changes to your custom classifier definitions.

Apply Microsoft Purview Data Loss Prevention (DLP), Information Protection (MIP) labels, or Data Lifecycle Management (DLM) policies to previously unclassified historical data.

<https://learn.microsoft.com/en-us/purview/on-demand-classification>

Purview: Rename DLP Policies – No Rebuild Needed

Starting July 2025 (Public Preview), Microsoft Purview | Data Loss Prevention (DLP) will let you rename existing policies and rules without having to rebuild them from scratch

Public Preview: Starts mid-July 2025, completed by end of July
General Availability (Worldwide): Late August to mid-September 2025
GCC, GCC High, DOD: Mid-October to end of October 2025

This feature will be available for key workloads:
Exchange Online

Microsoft Teams

SharePoint & OneDrive

Endpoint DLP

Optical Character Recognition (OCR) for OneDrive for Business

Admins can now turn on OCR for selected OneDrive groups and users or enable it for all OneDrive users within their organization. This enhancement ensures that all files become searchable, improving discoverability and supporting compliance initiatives such as eDiscovery.

OCR is a pay-as-you-go feature. Turning on the OCR feature will incur cost for the organization.

Pay-as-you-go services

Pay-as-you-go is a flexible way to pay for Microsoft 365 services with no upfront costs. Set up billing, activate services, and only pay when those services are used.

[Go to Azure Cost Management to view your usage and costs](#)

Microsoft Purview DLP will enable policy scoping based on both users and machines

Microsoft has officially announced the enhancement to Microsoft Purview Data Loss Prevention (DLP) that allows administrators to scope policies based on both users and devices.

This update enables more granular control over data protection by allowing policies to be assigned to specific devices or device groups, in addition to user groups.

Choose locations to apply the policy

We'll apply the policy to data that's stored in the locations you choose.

Status	Location	Included	Excluded

Hardening update to Microsoft Entra Connect Sync by April 30, 2025

Microsoft has officially announced the release of Microsoft Entra Connect Sync version 2.4.18.0 in October 2024, which includes critical security enhancements.

Organizations are required to upgrade to this version or a newer one by April 30, 2025 to avoid potential service interruptions.

Note: Autoupdate works only if you enable TLS1.2 on your server.

<https://learn.microsoft.com/en-us/entra/identity/hybrid/connect/harden-update-ad-fs-pingfederate>

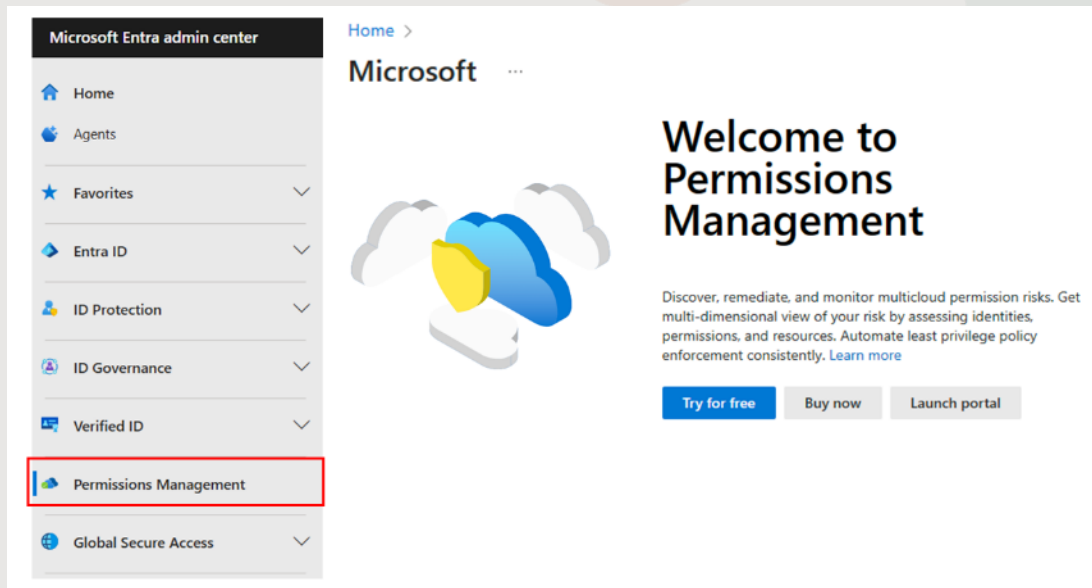

Entra Permissions Management official retirement by October 1, 2025

Microsoft officially announced the retirement of Permissions Management by December 31, 2025, urging users to move to Microsoft Entra Privileged Identity Management (PIM).

"Effective April 1, 2025, Microsoft Entra Permissions Management will no longer be available for purchase, and on October 1, 2025, we'll retire and discontinue support of this product"

This is part of a larger shift toward more streamlined and integrated identity governance.

Cambio e unificazione della gestione delle App tra Teams, Outlook, and the Microsoft 365 app

Message ID: MC796790

Due portali per distribuire le App:

- <https://admin.microsoft.com/#/Settings/IntegratedApps>
- <https://admin.teams.microsoft.com/policies/manage-apps>

Unified App Management in 2 fasi:

- Fase 1 entro la fine di aprile 2025: cambio e unificazione per tutti i tenant che hanno le configurazioni di default
- Fase 2 entro una data da definirsi: cambio e unificazione degli altri tenant con cambi di comportamento secondo le tabelle indicate.

Tabelle: <https://learn.microsoft.com/en-us/MicrosoftTeams/manage-apps-across-m365>

Al termine ogni cambio inerente il mondo Teams verrà sincronizzato tra le due viste quindi coordinare gli amministratori dei due portali se sono diversi.

Inbound caller ID behavior

Finalmente disponibile la documentazione ufficiale per uno degli argomenti più richiesti in assoluto nel mondo Teams Voice: il processo di Caller ID RNL

Inbound caller ID behavior

In the operation of processing an inbound PSTN call, Teams looks up the number of the inbound caller's calling Line ID in the contacts configured in your organization.

Teams references your organization's Outlook and Entra ID contacts and your end-user's People contacts.

- Only "Mobile phone" and "Work (Business) phone" contact fields are searched
- Teams looks up and matches with contact numbers that are in E.164 standard format (they must start with a "+")

If there is a match between the calling line ID and a contact, Teams substitutes the PSTN caller ID info with the matched contact's name. If there isn't a match, then the caller ID displays what's provided by the PSTN call.

The hierarchy for which source provides the presented caller ID to an end user is as follows, in order:

- The called Teams user's People contacts
- Contacts in Outlook and Entra ID
- The inbound PSTN call's calling party name
- The inbound PSTN call's calling line ID

Note

Given that two Teams users can each customize the names in their People contacts differently for the same people, it's possible that a caller ID to the first Teams user could appear different than the caller ID to the second Teams user from the same caller.

<https://learn.microsoft.com/en-us/microsoftteams/caller-id-policies>

Microsoft Teams General Channel is back

Microsoft Teams General Channel is back by popular demand!

Originally planned to be blocked as the name for the first channel of a new team (MC814583), General is back, along with the option to choose your own first channel name.

The first channel of a team can be named "General" with no restrictions

Naming the first channel "General" will pin it to the top of the channel list

Team owners can rename the existing first channel to "General"

Details in MC1048628

MC1048628 - Provide a meaningful name to the first channel of the team

Primary Service: Teams **Last Updated:** 04 Apr 2025

User Impact

Medium

Release Start

31 May 2025

Release End

31 May 2025

ChangePilot Summary:

- Teams users can add a Loop workspace tab to standard channels for real-time collaboration.
- The Loop workspace will be accessible to all team members and comply with Microsoft 365 group standards.
- Users can create new workspaces, add content, collaborate, and share components within Teams.
- The ability to create Loop workspaces can be managed by admins through policy settings in the Microsoft 365 Apps admin center.
- Any associated Loop workspace will be deleted if the team is deleted, but can be restored if the Microsoft 365 group is restored.

Multilingual meetings

In the upcoming update, meeting organizers and users will have the ability to set their spoken language preferences during multilingual meetings, revolutionizing the way transcripts are generated.

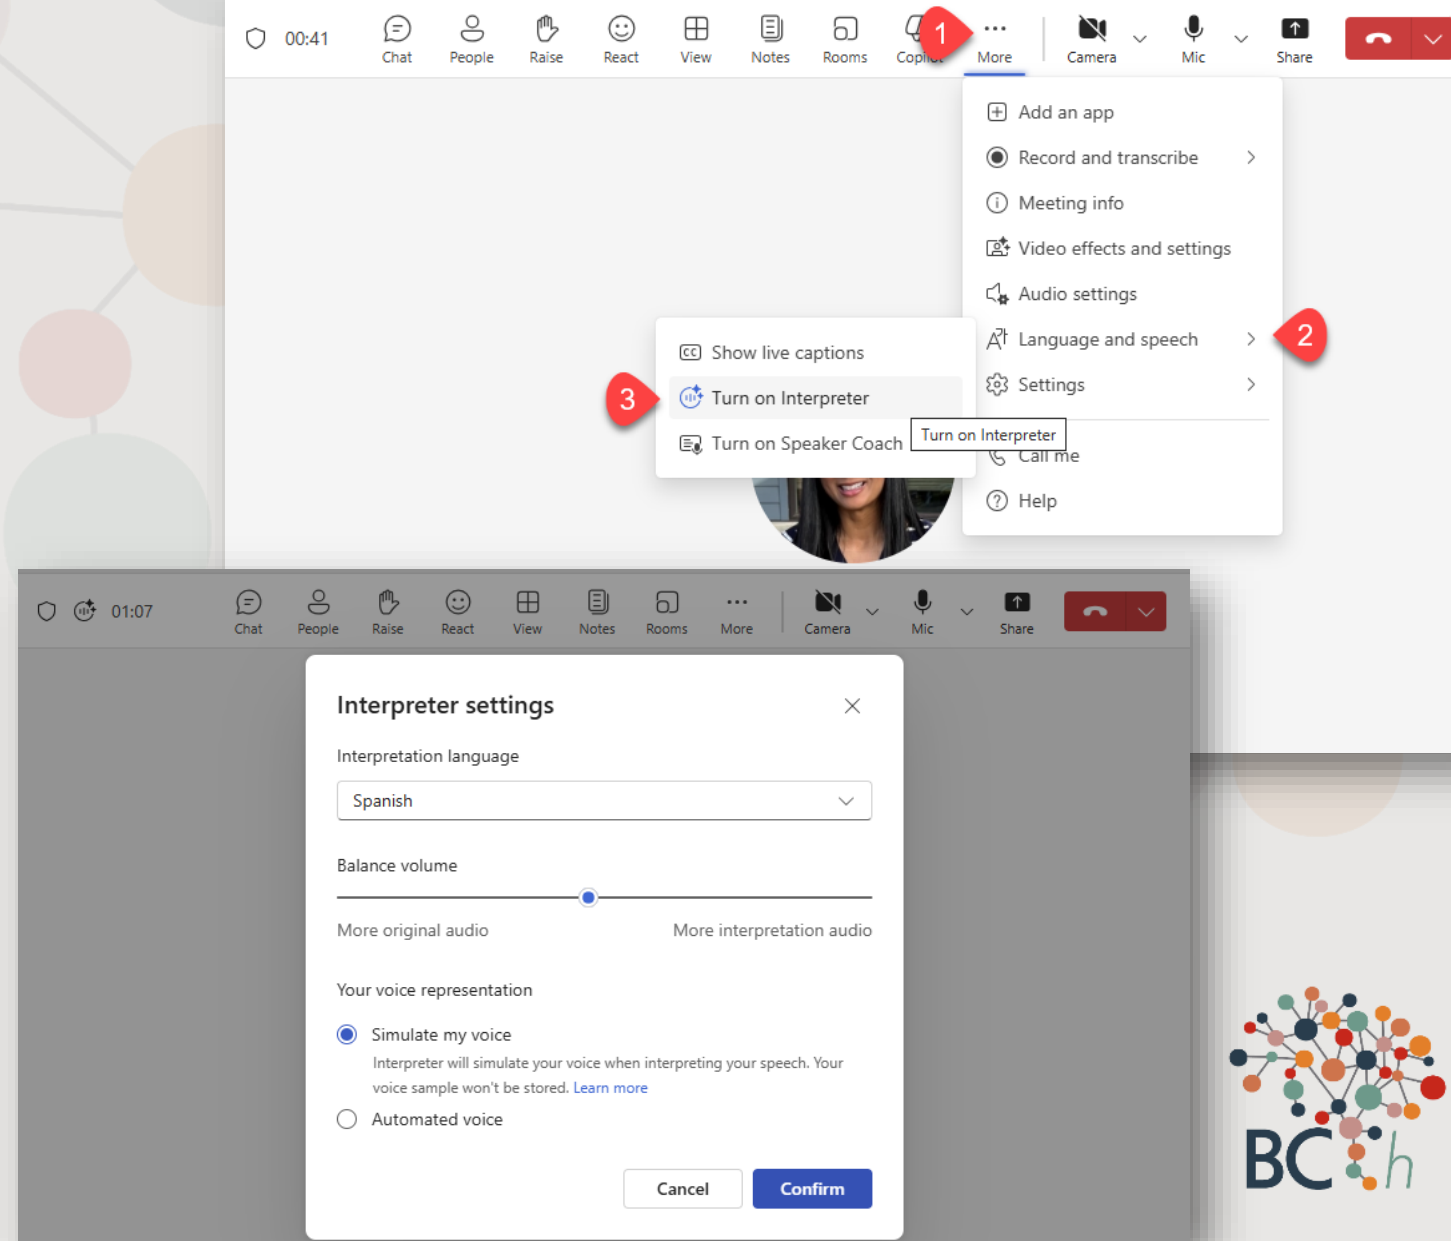

This innovation removes the necessity for a common spoken language, allowing Teams to create meeting transcripts in each participant's selected language.

These transcripts will seamlessly integrate into the Meeting Recap, fostering a more inclusive collaboration environment for multilingual teams, all without the need for additional configurations.

"Game changing" Interpreter agent in Teams meetings

- Interpreter helps bridge language barriers, ensuring that participants can communicate effectively regardless of their native language
- It enables more inclusive and productive meetings by allowing everyone to follow and contribute in their preferred language
- The tool supports global collaboration, making it easier to work with international teams and clients without the need for professional interpreters
- By providing real-time interpretation, Interpreter enhances understanding and reduces the risk of miscommunication during crucial discussions

"Game changing" Interpreter agent in Teams meetings

Licensing

During preview only with Copilot license. The participants who wants to listen to the translated voice needs the license not the organizer

User Consent

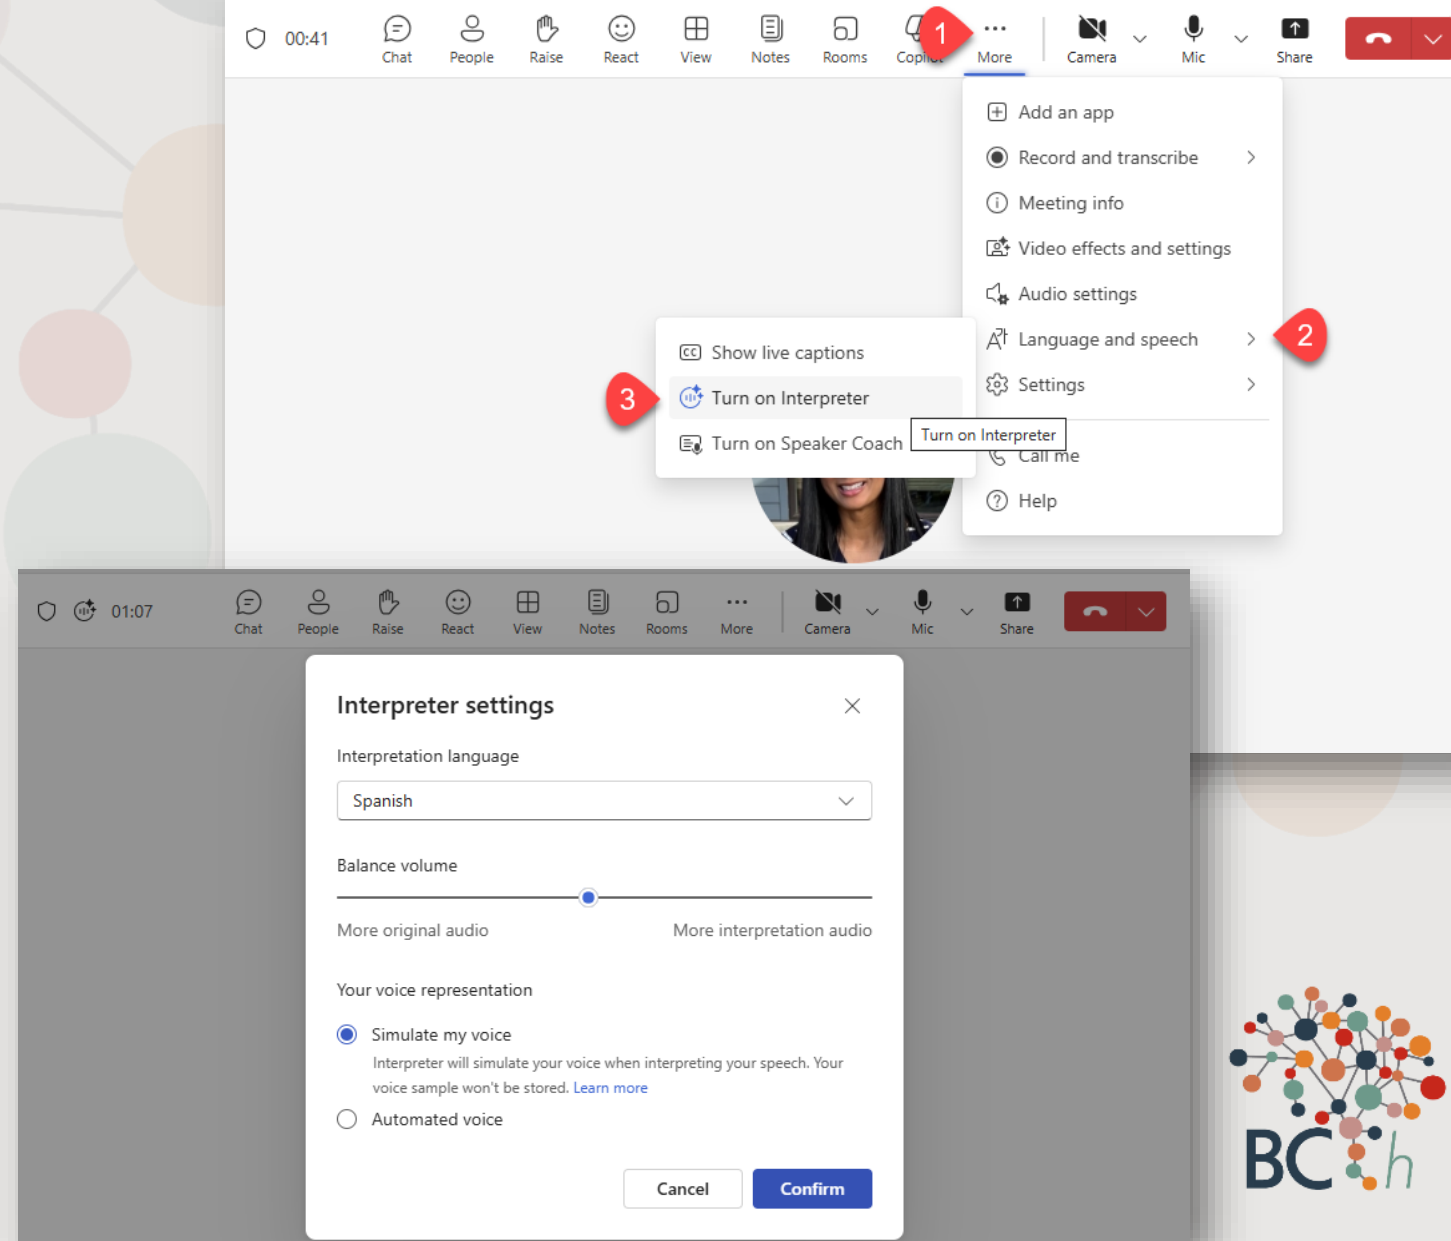

Before simulating the voice of the speaker, consent must be obtained. If consent is not given, the default voice provided by the platform will be used

Admin controls

Administrators have the ability to manage and configure Interpreter settings. They can enable or disable the agent for all participants or specific individuals during a meeting

Notifications

Participants are notified when Interpreter is turned on or off. This ensures transparency and keeps everyone informed about the status of the interpretation

Intelligent meeting recap available in multi-tenant setups

Microsoft Teams: Intelligent meeting recap available in multi-tenant set ups

Microsoft Teams

Microsoft Copilot (Microsoft 365)

Copilot users in business-to-business multi-tenant organization set ups can now view the intelligent meeting recap after the meeting from the resource tenant where the meeting was hosted.

The logo for BCCH (British Columbia Children's Hospital) is located in the bottom right corner. It features a stylized network of colorful dots (red, orange, yellow, green, blue, black) connected by thin lines, forming a circular shape. Below this graphic, the letters "BC" are in a bold, dark blue font, and "ch" is in a lighter blue, lowercase font.

Moving Teams Android Devices to AOSP Device Management

IMPORTANT! Microsoft Teams Android devices will be commencing auto updates for firmware in order to migrate to Intune AOSP device management starting on May 15th.

These firmware updates are not pauseable. Devices will simply take them following the phases set in Teams Admin Center:

Validation: 0-15 days

General: 16-45 days (default)

Final: 45-60 days

Please ensure that all prerequisites for AOSP device management migration are completed for your organization to ensure a smooth migration. Your devices may sign out during migration if the prerequisites are not carried out properly.

Microsoft Teams Federation Update: Selectively Allow Trusted Trial Tenants with New PowerShell Setting

In Microsoft Teams (and generally in Microsoft 365), federation means allowing users from different organizations (different tenants) to chat and collaborate.

The `Set-CsTenantFederationConfiguration` cmdlet is a PowerShell command used to configure how your organization handles federation.

Until now, trial tenants (organizations using a trial version of Microsoft 365) were usually blocked from federating by default — because trials are often used for testing and sometimes by less trustworthy or temporary setups.

`Set-CsTenantFederationConfiguration` cmdlet now includes **–AllowedTrialTenantDomains**

With this setting, an admin can keep blocking all trial tenants by default (good for security) but allow specific trusted trial tenants to federate.

Teams – ‘File Open Preferences’ for more 365 apps

When it comes to how links to cloud-hosted Word, Excel, or PowerPoint files should open, you may prefer they open in a browser, or you may prefer them to open in desktop apps.

Some prefer to open them directly in Teams. Now, you can choose how they open across your apps in a consistent way.

Teams file open preference will extend to your file open preferences across Microsoft 365 apps.

That way, when you set your preference for how to open files in one app, it will consistently apply to the rest. You will be able to choose your Teams file open preference separately.

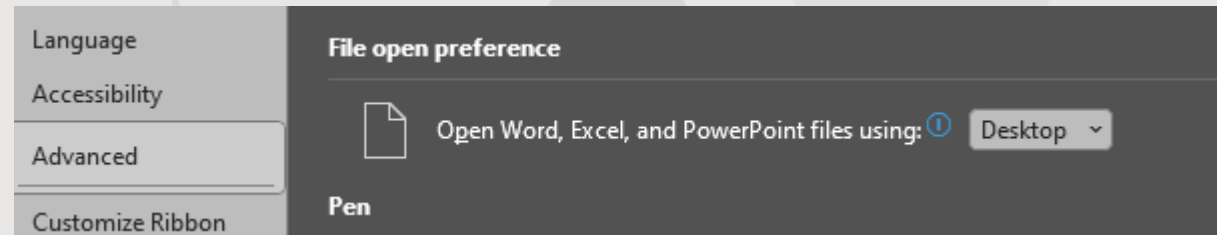

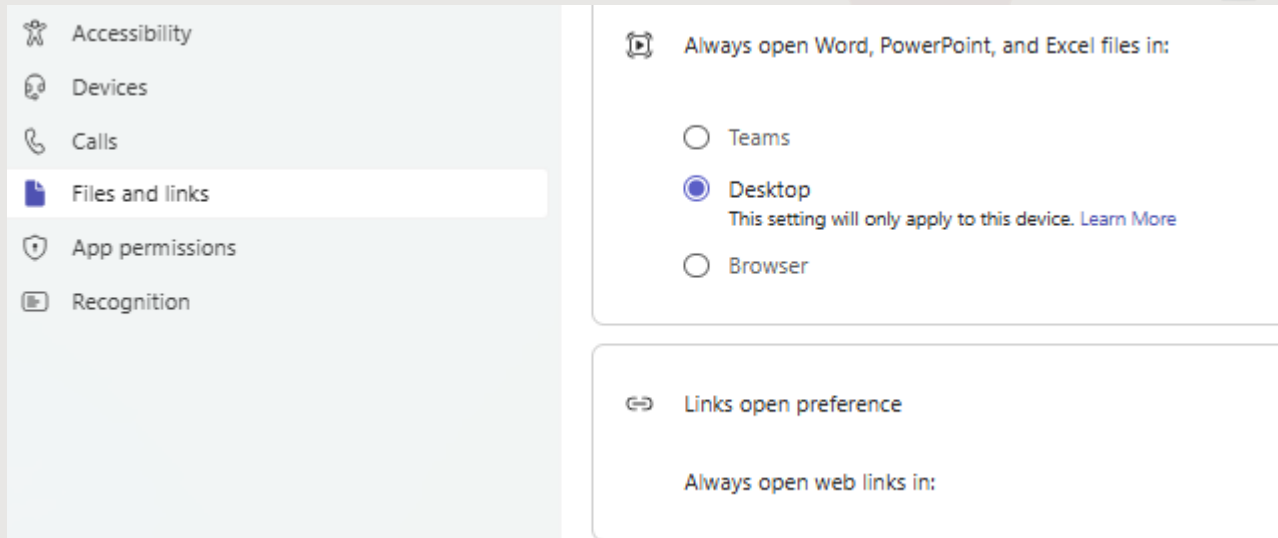

Your file link open preference will apply to links clicked from Word, Excel, PowerPoint, Teams and classic Outlook for:

- Word files
- Excel files
- PowerPoint files

<https://support.microsoft.com/en-us/topic/open-file-links-directly-in-microsoft-365-desktop-apps-from-teams-and-classic-outlook-7c1a08d0-54d0-499e-992e-2c41f70b59a1>

Teams – ‘File Open Preferences’ for more 365 apps

Local PTZ camera controls for MTR on Android (and Windows later)

Microsoft Teams Rooms on Android will soon support local pan-tilt-zoom (PTZ) controls.

This message is associated with Microsoft 365 Roadmap ID [482189](#).

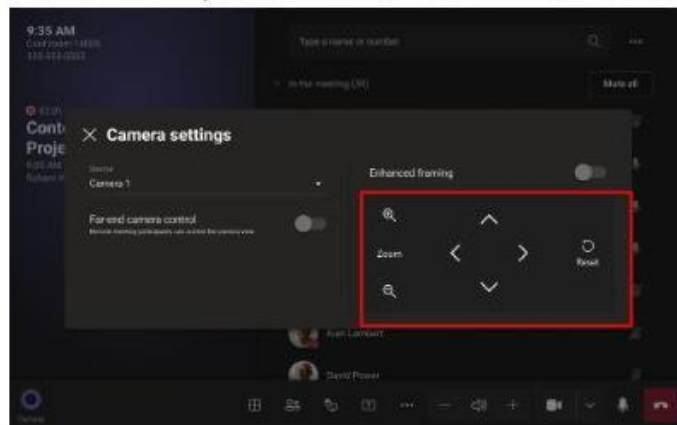

[When this will happen:]

General Availability (Worldwide, GCC): We will begin rolling out late April 2025 and expect to complete by early May 2025.

General Availability (GCC High): We will begin rolling out late May 2025 and expect to complete by early June 2025.

[How this will affect your organization:]

After this rollout, the local PTZ controls in the camera settings will pop up for users when the *Enhanced framing* toggle is set to off.

Admins will have the ability to turn this feature on or off in the admin settings for each Teams Rooms on Android device. This setting will be on by default.

[What you need to do to prepare:]

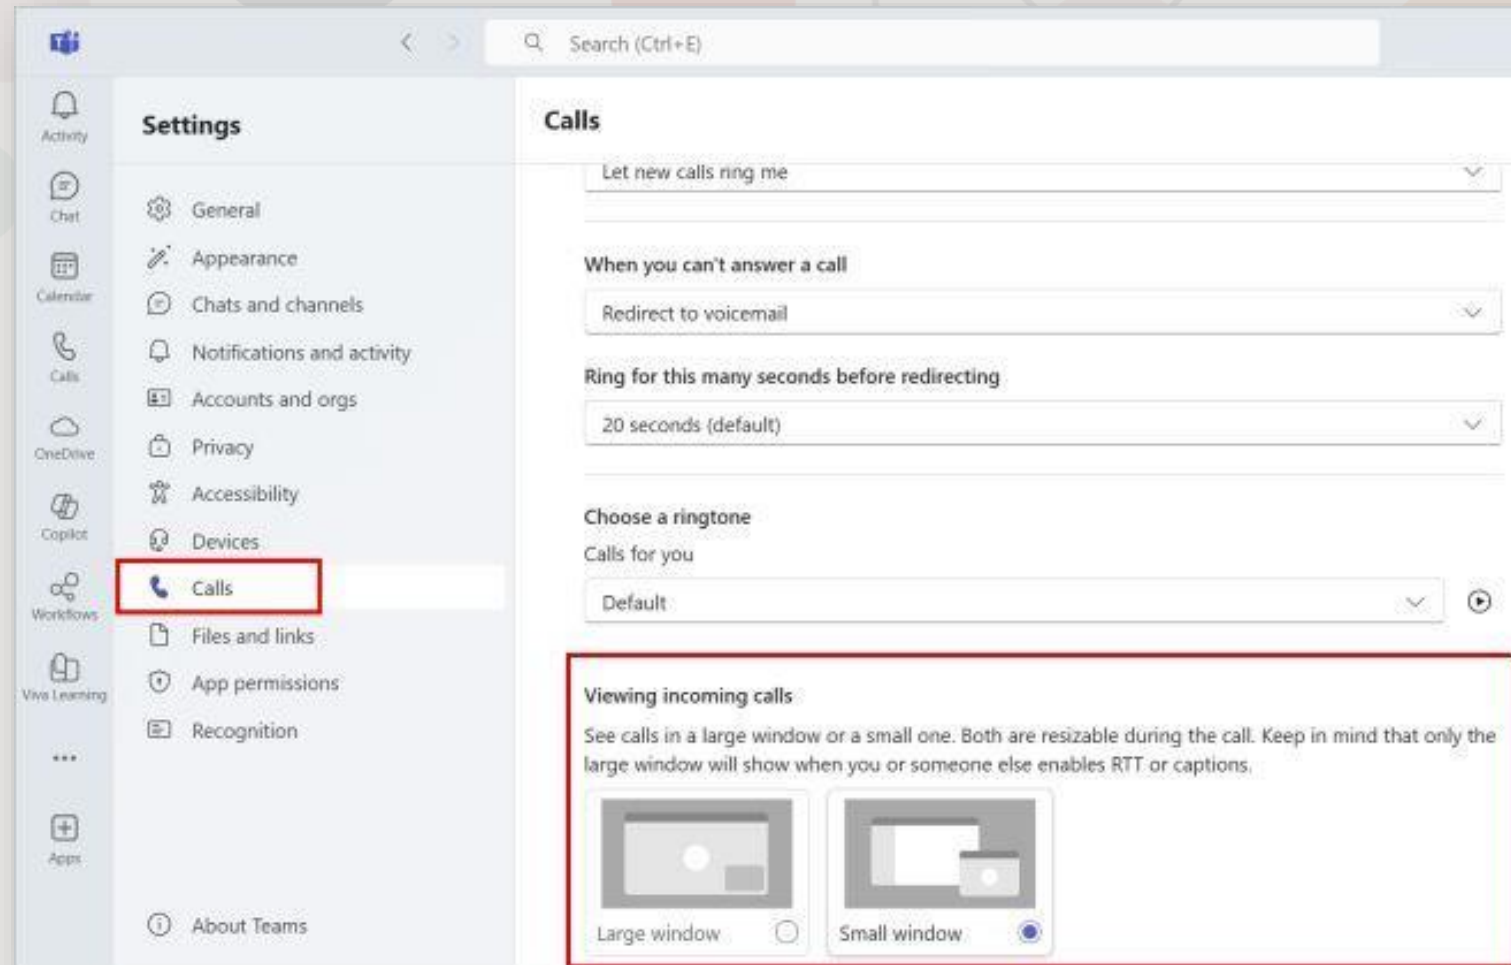

This rollout will happen automatically by the specified dates with no admin action required before the rollout. Review your current configuration to determine the impact for your organization. You may want to notify your users about this change and update any relevant documentation.

Incoming calls in a small window in Teams

A new setting that allows users to view incoming calls in a small window in Teams to prevent disruptions.

Users will be able to take a call in the small window and continue to see what they were working on before the call.

This message applies to Teams on Windows desktop, Teams on Mac desktop, Teams for the web, and Teams for iOS/Android.

EWS (Exchange Web Services) to Microsoft Graph Migration Guide Series

Ad ottobre 2026 gli Exchange Web Services EWS in Exchange Online verranno ritirati (MC676299).

Ancora moltissime applicazioni li usano ed è ora di migrarle tutte a Microsoft Graph API.

Per gli sviluppatori consiglio di tenere un occhio sugli articoli di questo blog ufficiale per sapere puntualmente quando vengono rilasciate nuove importanti funzionalità come, in questo specifico caso, la cancellazione definitiva degli elementi di posta.

Microsoft Graph API vs. EWS

Feature	EWS	Microsoft Graph API
Authentication	Basic & OAuth	OAuth 2.0 (Modern Auth)
Email Access	✓ Yes	✓ Yes
Calendar & Contacts	✓ Yes	✓ Yes
Streaming Notifications	✓ Yes	✓ Yes (via Webhooks)
Room Finder	✓ Yes	✗ No (Workarounds exist)
Performance	Slower	Faster
Security	Legacy	Modern

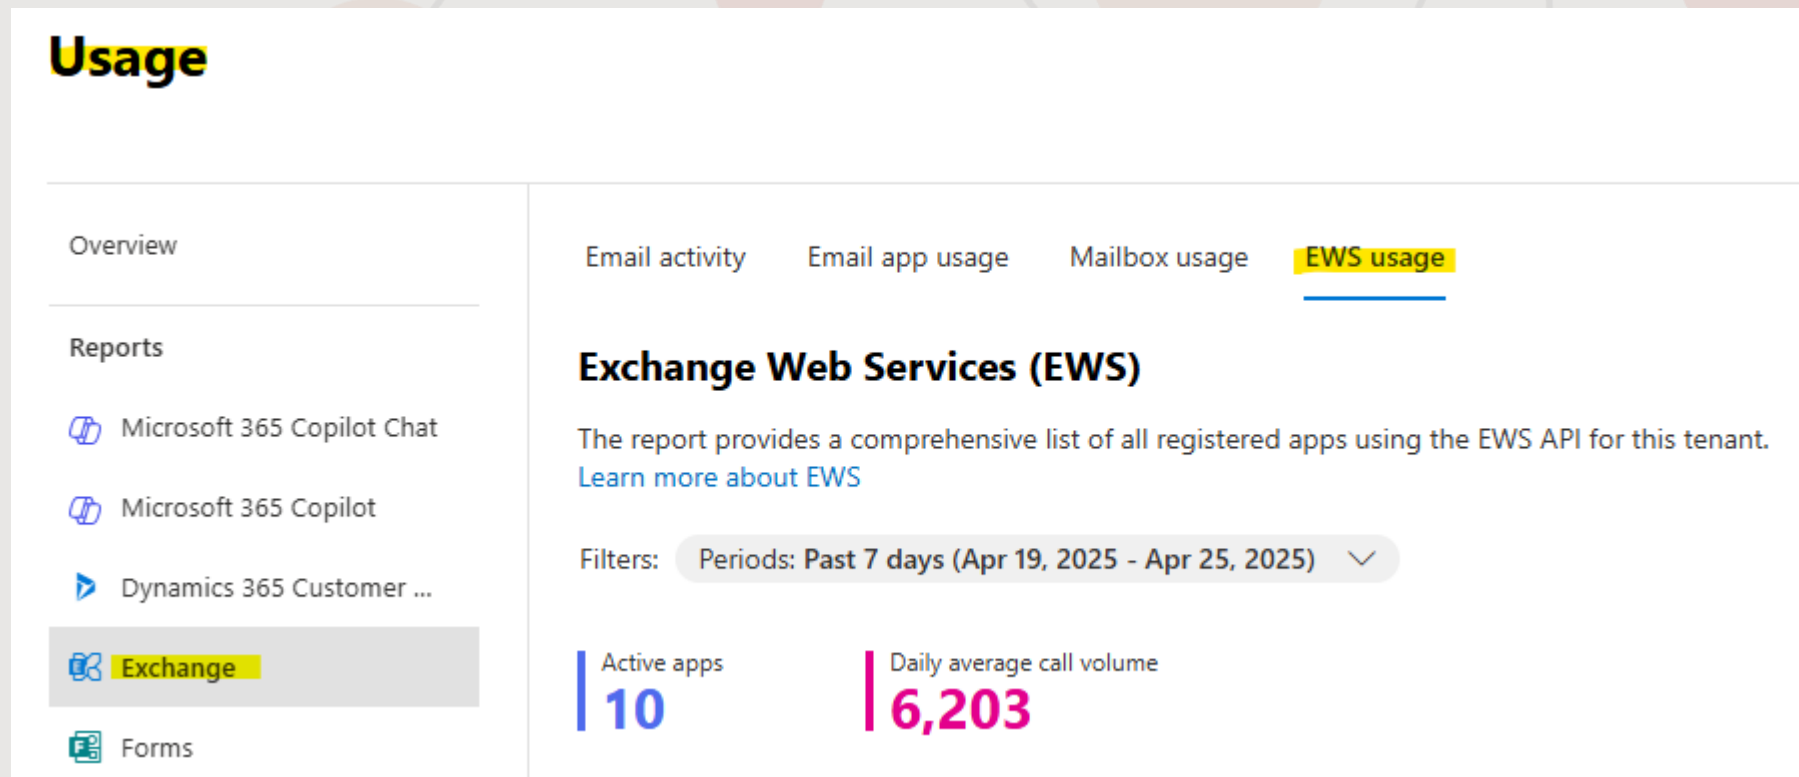

<https://techcommunity.microsoft.com/blog/exchange/ews-exchange-web-services-to-microsoft-graph-migration-guide-series/3957158>

Applicazioni che usano gli EWS

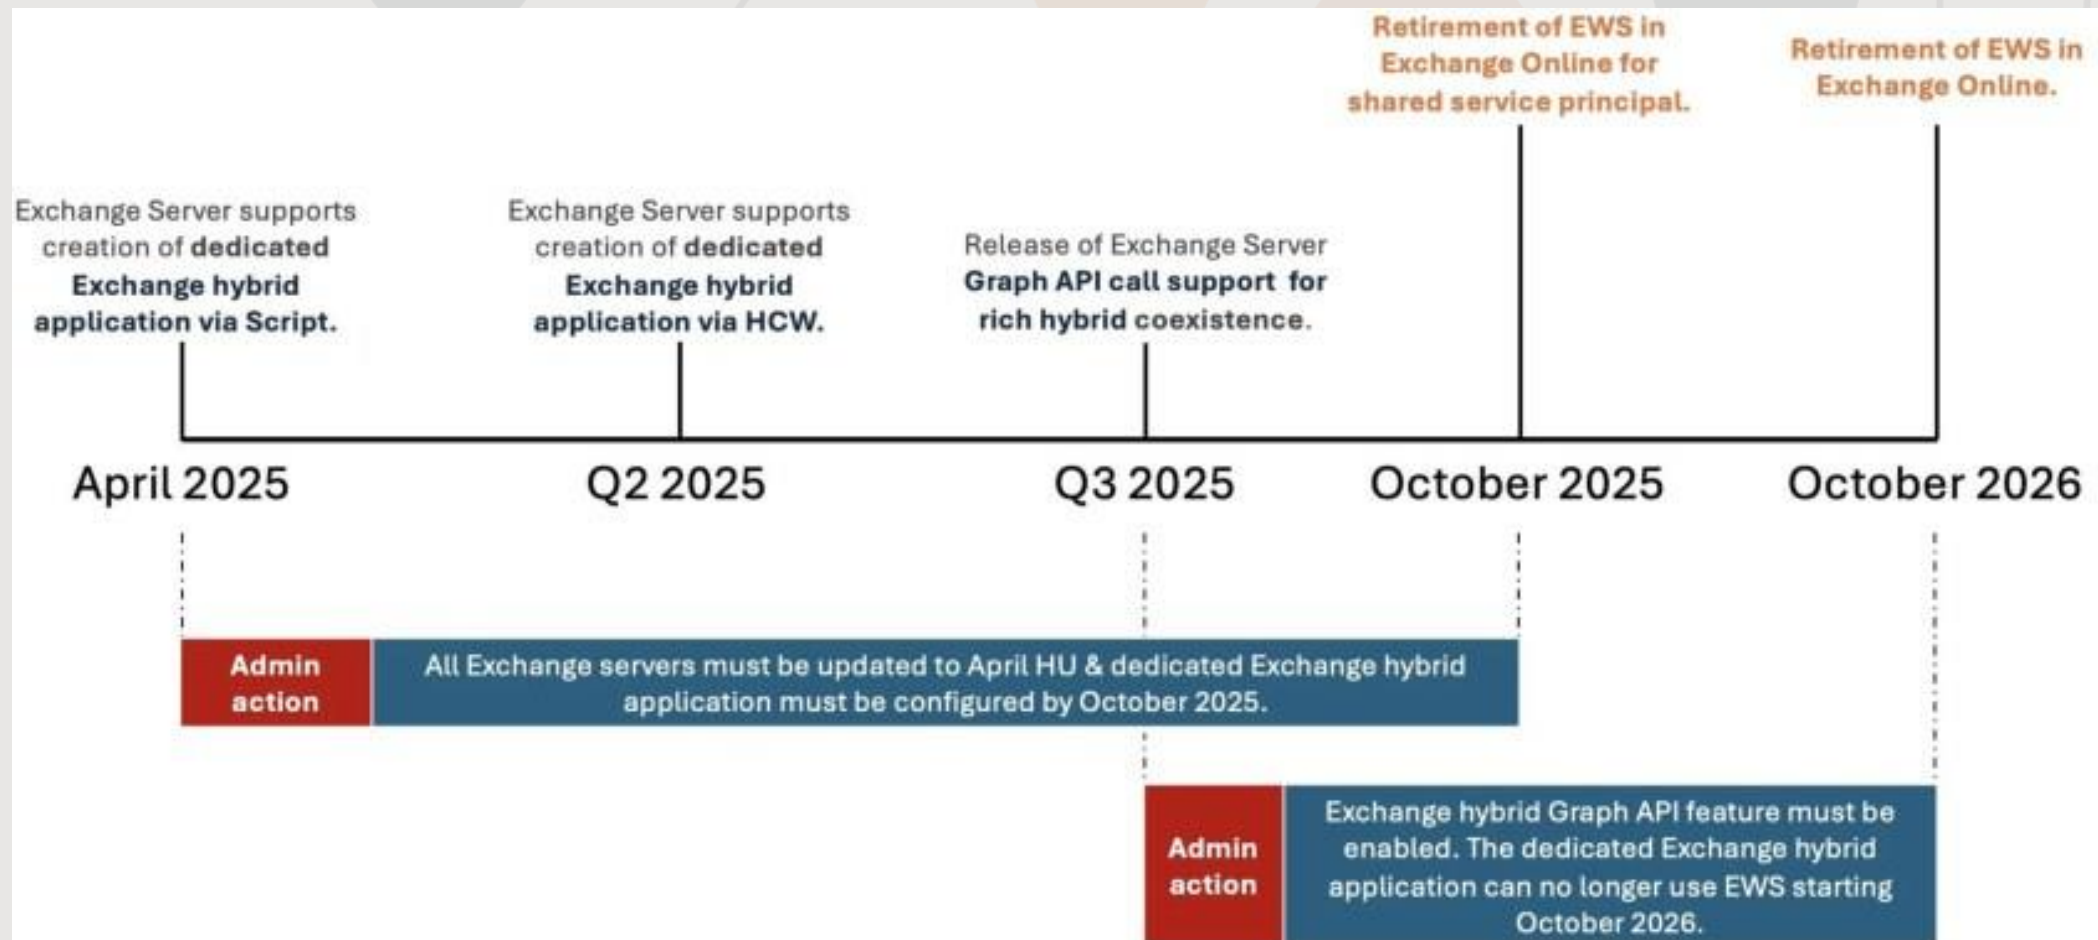

Report ancora un po' acerbo ma utile per capire l'impatto in azienda:
<https://admin.microsoft.com/#/reportsUsage/EWSWeeklyUsage>

La classificazione delle app avviene tramite ID e operazione compiuta.

Exchange Hybrid cambia forma da questo mese (April 2025 HU)

Vista la prossima dismissione degli Exchange Web Services in Exchange Online (Ott 2026) è necessario riconfigurare l'Exchange Hybrid SOLO in caso di Rich Coexistence (Free/Busy lookups, MailTips and profile picture sharing).

Nuovo Outlook o meglio --> Outlook

L'Outlook tradizionale diventa Classic.

Nuovo report per misurarne l'adozione:

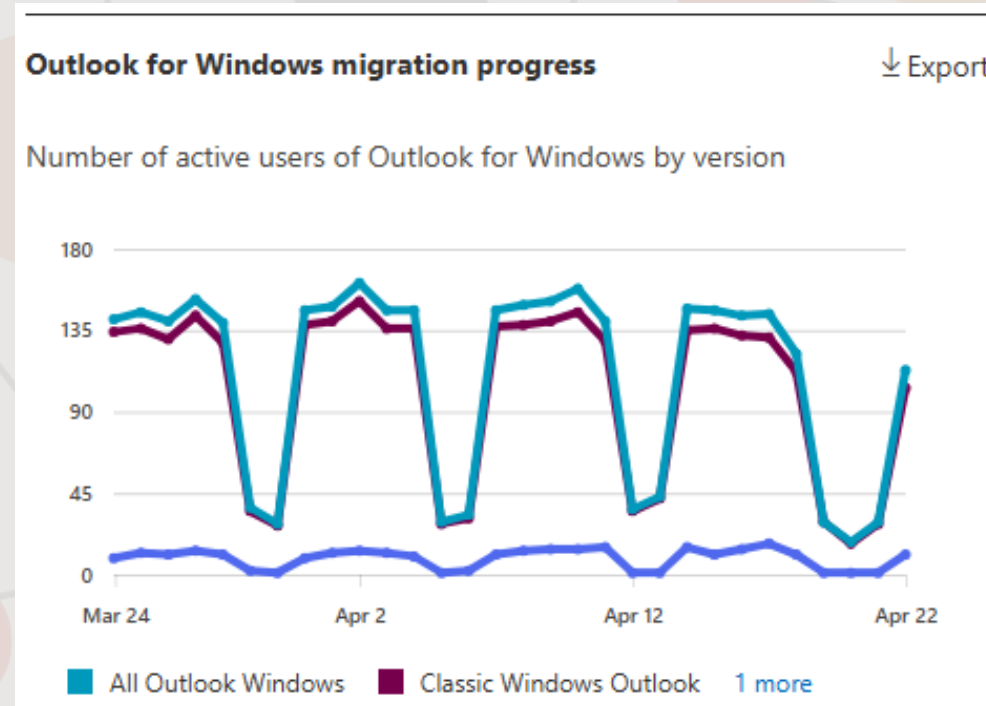

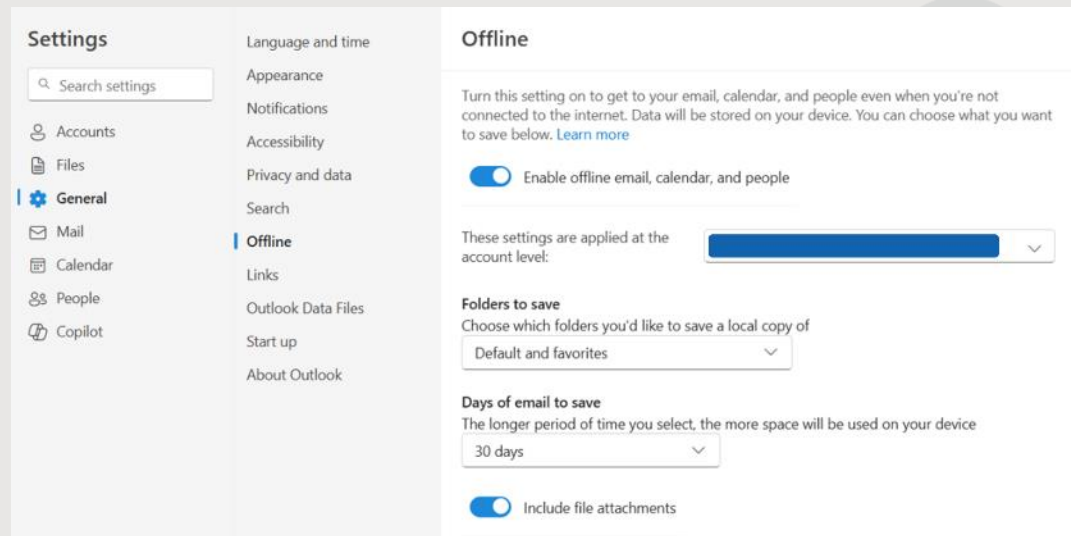

<https://admin.microsoft.com/#/reportsUsage/ProPlusUsage>

Si possono richiamare le email.

La modalità offline si completa:

Apertura elementi controllabile via OWAMailboxpolicy

Apertura allegati

Cambio gestione DNS per i record MX di Exchange Online

Message ID: MC1048624.

Dal 1 agosto 2025 tutti i nuovi domini di posta si vedranno chiedere la creazione del record MX nel sottodominio **mx.microsoft** al posto del tradizionale mail.protection.outlook.com

Favorirà la migrazione al nuovo standard SMTP DANE con DNSSEC.

I record MX nel sottodominio mx.microsoft sono abilitati al DNSSEC di default e non sono deducibili perché hanno **alcuni caratteri pseudocasuali**.

Es: dreammaker-it.**y-v1**.mx.microsoft

Es: comtelitalia-it.**l-v1**.mx.microsoft

Attenzione ad eventuali job automatici di provisioning che devono usare il nome corretto reperibile tramite PowerShell e/o GraphAPI.

Each Microsoft 365 tenant is restricted to a maximum of 3,000 DDGs.

Microsoft has introduced a new limit on Dynamic Distribution Groups (DDGs) in Exchange Online. Starting mid-April 2025, each Microsoft 365 tenant is restricted to a maximum of 3,000 DDGs. Once this limit is reached, administrators must delete existing DDGs before creating new ones. This change is enforced automatically and cannot be disabled.

Reports > Mail flow > Dynamic distribution group Report

Dynamic distribution group report

Use this chart to understand your DDG usage. You can see the number of DDGs used and unused in a selected amount of time. The table below will reflect the graph and list the DDGs that are used and unused. [Learn more](#)

Outlook Newsletters

As of April 2025, Microsoft has provided an update on the rollout timeline for the Outlook Newsletters feature in the new Outlook for Windows and Outlook on the web.

Initially, the public preview was expected to complete by late March 2025. However, the updated schedule indicates that the public preview rollout began in mid-February 2025 and is now anticipated to complete by late April 2025.

This feature enables users to create, distribute, and track internal email newsletters directly within Outlook, offering built-in tools to manage reader engagement. Users can discover and subscribe to newsletters through the new Explore page in the Outlook Newsletters module
