Entra Groups Insights dashboard

The Groups Insights dashboard now provides immediate visibility into common group hygiene and governance gaps, such as:

- Groups with no owners
- Groups with service principals as owners
- Groups with guest users as owners
- Groups with complicated rules
(Dynamic groups with more than 10 expressions)
- Groups with low efficient operators
(Dynamic groups using 'contains' or 'match' operators)
- Newly created groups
- Expiring groups
- Soft deleted groups
- Restored groups
- Groups without sensitivity labels

Microsoft Entra: Jailbreak/Root Detection in Authenticator App

Starting February 2026, Microsoft Entra will introduce Jailbreak and Root detection for credentials stored in the Microsoft Authenticator app.

What this means:

- If a device running Authenticator is detected as jailbroken (iOS) or rooted (Android), the app will block access to Entra credentials stored on that device.
- Protects organizations from compromised devices being used to authenticate with corporate identities.
- Applies to passkeys, phone sign-in, and other Entra credentials in Authenticator.
- No admin configuration is required — detection is automatic and enforced at the app level.

Availability: General Availability — February 2026

Microsoft Entra: Hybrid Join via Entra Kerberos (Public Preview)

Microsoft Entra Hybrid Join via Entra Kerberos is now in Public Preview, enabling organizations to configure Hybrid Azure AD Join without requiring the Entra Connect client on-premises.

Key benefits:

- Eliminates the need for the legacy Entra Connect (Azure AD Connect) client for hybrid join scenarios.
- Uses cloud-native Entra Kerberos to authenticate and register Windows devices in hybrid environments.
- Simplifies infrastructure, reduces on-premises footprint, and accelerates Zero Trust adoption.
- Particularly valuable for organizations on a path from Hybrid Join to full Entra ID Join.

Availability: Public Preview — February 2026

Entra Hybrid Join via Kerberos: What changes and what doesn't

Before: Classic Hybrid Join

Required components:

- On-premises Active Directory (AD DS)
- Entra Connect (formerly Azure AD Connect) server on-premises
- SCP (Service Connection Point) in AD to point devices to Entra tenant
- Device registers with Entra ID via sync from Entra Connect

Drawbacks:

- Entra Connect requires dedicated on-prem server, patching and monitoring
- Tightly couples cloud identity lifecycle to on-prem infrastructure
- Legacy component Microsoft is gradually deprecating

After: Hybrid Join via Entra Kerberos

Required components:

- On-premises Active Directory (AD DS) — still required
- Entra Kerberos configured on the on-prem domain (minimal footprint, no extra server)
- No Entra Connect server required for device registration
- Device authenticates to Entra ID directly via Kerberos ticket from AD

Important clarifications:

- User/group sync to Entra ID still needs Entra Connect or Cloud Sync — only device registration is decoupled
- Stepping stone toward full Entra ID Join (no AD) — not a replacement for it
- Requires Windows 10/11 clients + Windows Server 2016+ on domain controllers

SharePoint and OneDrive for Business standalone plans will be retired

Microsoft has [announced](#) the upcoming retirement of the standalone plans for SharePoint and OneDrive for Business. After this retirement, Microsoft 365 suites will be the primary way for organizations to access SharePoint and OneDrive capabilities.

This retirement affects the following license SKUs:

SharePoint Plan 1 (Product ID CFQ7TTC0LH0N)

SharePoint Plan 2 (Product ID CFQ7TTC0LH14)

OneDrive for Business Plan 1 (Product ID CFQ7TTC0LH5V)

OneDrive for Business Plan 2 (Product ID CFQ7TTC0LH1M)

Organizations should plan for alternatives such as Microsoft 365 suites, capacity packs, or pay-as-you-go storage options.

Timeline

Starting 1 June 2026, end of sale for new purchases. Existing customers can continue to renew their subscriptions.

Starting January 2027, existing customers will no longer be able to renew their subscriptions.

December 2029, full retirement of SharePoint Plan 1 and Plan 2, and OneDrive for Business Plan 1 and Plan 2.

How does this affect your organisation?

If your organisation uses one of the affected SKUs, you must transition to a Microsoft 365 suite ([Business](#) or [Enterprise](#)), use capacity packs, or adopt the upcoming SharePoint Pay-as-you-go (PAYG) storage option. Microsoft added the PAYG option to the [roadmap](#) in September 2025.

Microsoft Intune: Endpoint Privilege Management for Azure Virtual Desktop

Intune service update 2601 (February 2026) brings Endpoint Privilege Management (EPM) support to Azure Virtual Desktop (AVD) single-session VMs, extending least-privilege access controls to cloud-hosted desktops.

What's new in this update:

- EPM elevation policies can now be deployed to users on AVD single-session virtual machines.
- Admin Tasks moved from Public Preview to General Availability — centralized view for EPM elevation requests, Defender security tasks, and Multi-Admin Approval requests.
- New Lenovo Device Orchestration (LDO) integration direct link in the Intune admin center for unified partner portal experience.
- EPM is available as an Intune Suite add-on and will roll out to M365 E5 customers in 2026.

Availability: Generally Available — February 2026 (service update 2601)

Microsoft Intune: Cross-Tenant MAM Support in Edge for Business

Microsoft Edge for Business now extends Intune App Protection Policies (MAM) to devices managed by other organizations — covering cross-tenant scenarios such as contractors and M&A scenarios.

How it works:

- Admins set up a MAM profile on an externally managed device, creating a controlled browser environment inside Edge for Business.
- Enforces policies such as clipboard boundaries, watermarking, and protected downloads within the Edge work profile.
- Downloads from Edge are redirected to OneDrive for Business instead of local storage when data protection settings are applied.
- No additional apps required — no disruption to the end-user experience.

Availability: Rolling out March 2026 — Roadmap ID 557187

Microsoft Intune: New Setting to Block Unintended BYOD MDM Enrollment

The Problem: Accidental BYOD Enrollment

When a user signs in to an Office app (Edge, Outlook, Teams...) on a personal Windows device, they see a prompt:

“Allow my organization to manage my device”

The checkbox is **enabled by default**. Most users click through without reading it, which silently enrolls their personal device into Intune MDM — giving the org full management control.

Risks of unintended enrollment:

- Risk of accidental full device wipe (org-triggered)
- Compliance policies applied to personal devices
- Cluttered device inventory in Intune with personal machines
- Privacy concerns for employees

New Setting: Disable MDM Enrollment on Account Add

A new toggle in the **Automatic Enrollment** page lets admins suppress the MDM enrollment prompt when users add a work account via Office apps.

Where to configure:

- Intune admin center → Devices → Enrollment → Windows → Automatic Enrollment
- Enable toggle: “Disable MDM enrollment when adding work or school account on Windows”
- Also configurable via PowerShell (Graph) or Microsoft Graph API)

Important:

- Does NOT apply to Windows Settings, Company Portal, or apps requiring enrollment
- Does NOT affect already-enrolled existing devices
- Combine with MAM App Protection Policies for data protection without full device management
- Prerequisite: Entra ID P1/P2 license + Intune Administrator role

Status: Public Preview — off by default (February 2026)

Teams Phone

Licensing updates extend access to advanced capabilities in Microsoft Teams and Microsoft Places

Microsoft Teams Licensing Changes April 1st 2026

Places End-User Features

Teams Shared Space License

Advanced Town Hall & Webinar Features

Attendee Pack Licenses

Teams Premium

Teams Enterprise

Places end-user functionality moves from Teams Premium to Teams Enterprise licenses

- Renamed from Teams Shared Device license
- Manage up to four spaces/desks with a single license
- Enables Desk booking for employees
- Allows Space management of booking policies
- Provides Space Analytics like desk utilization reports
- Integrates with 3rd-party APIs for check-in signals and spatial data

- Features previously in Teams Premium move to Teams Core licenses
- Includes advanced host controls and management
- Supports up to 3,000 interactive attendees
- Allows up to 10,000 attendees in view-only experience

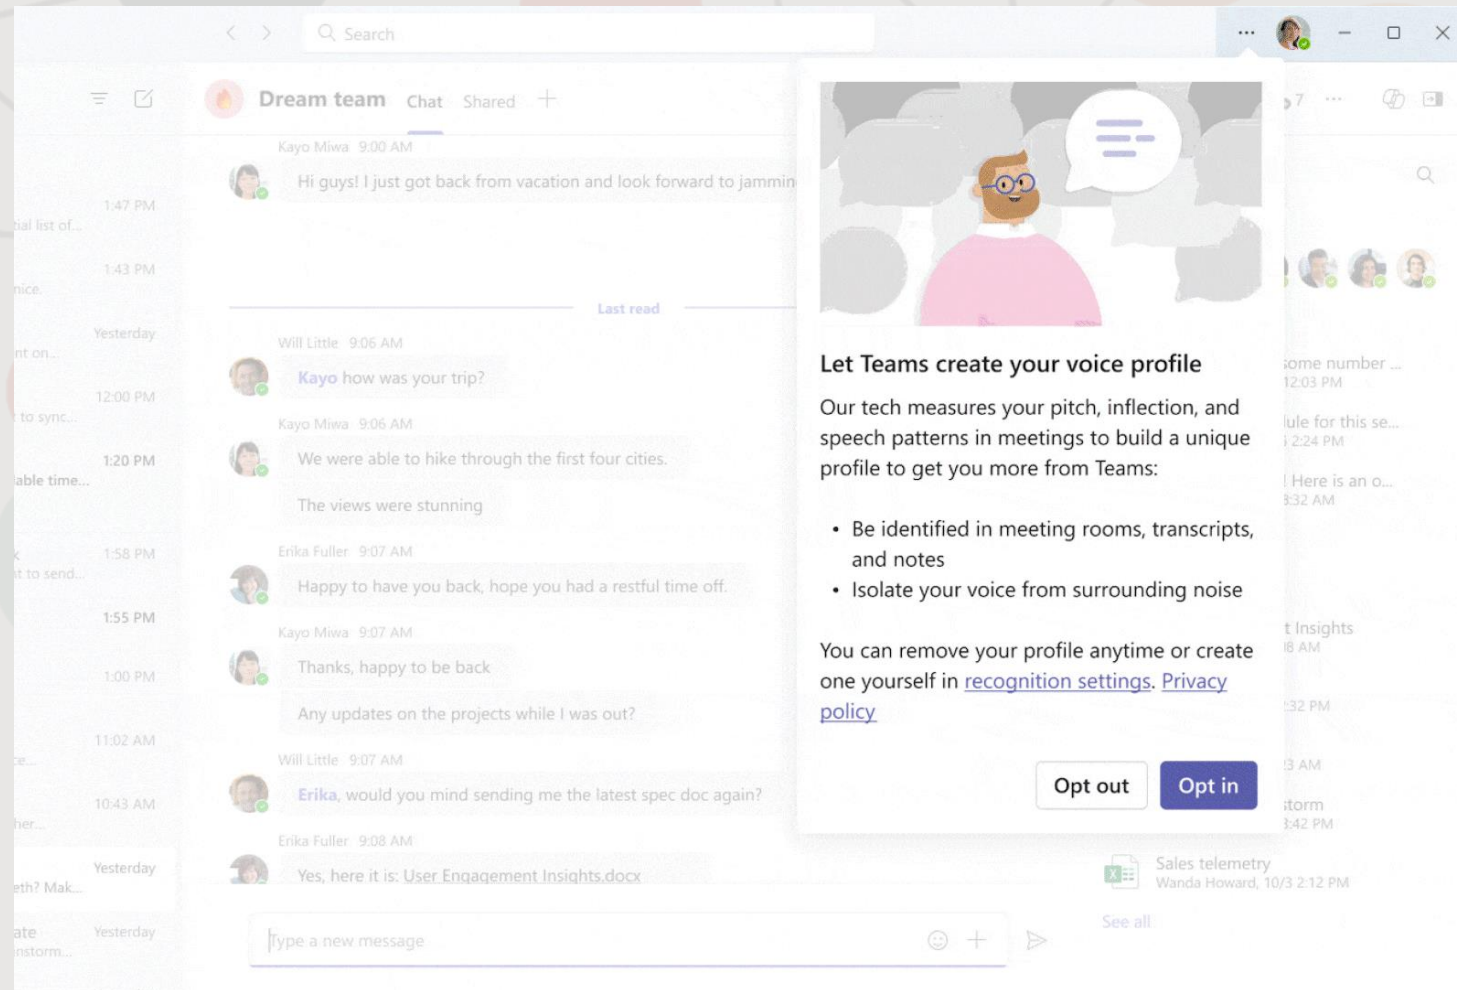

- New add-on licenses to increase attendee cap
- Scale events up to 100,000 participants
- Available in a range of sizes for added flexibility

Express voice enrollment [Available in March]

Express voice enrollment makes registering your voice in Teams fast and easy. Your profile enables features like voice isolation, speaker recognition, identification in a meeting room and transcripts, and enhanced meeting recaps and insights from Microsoft 365 Copilot.

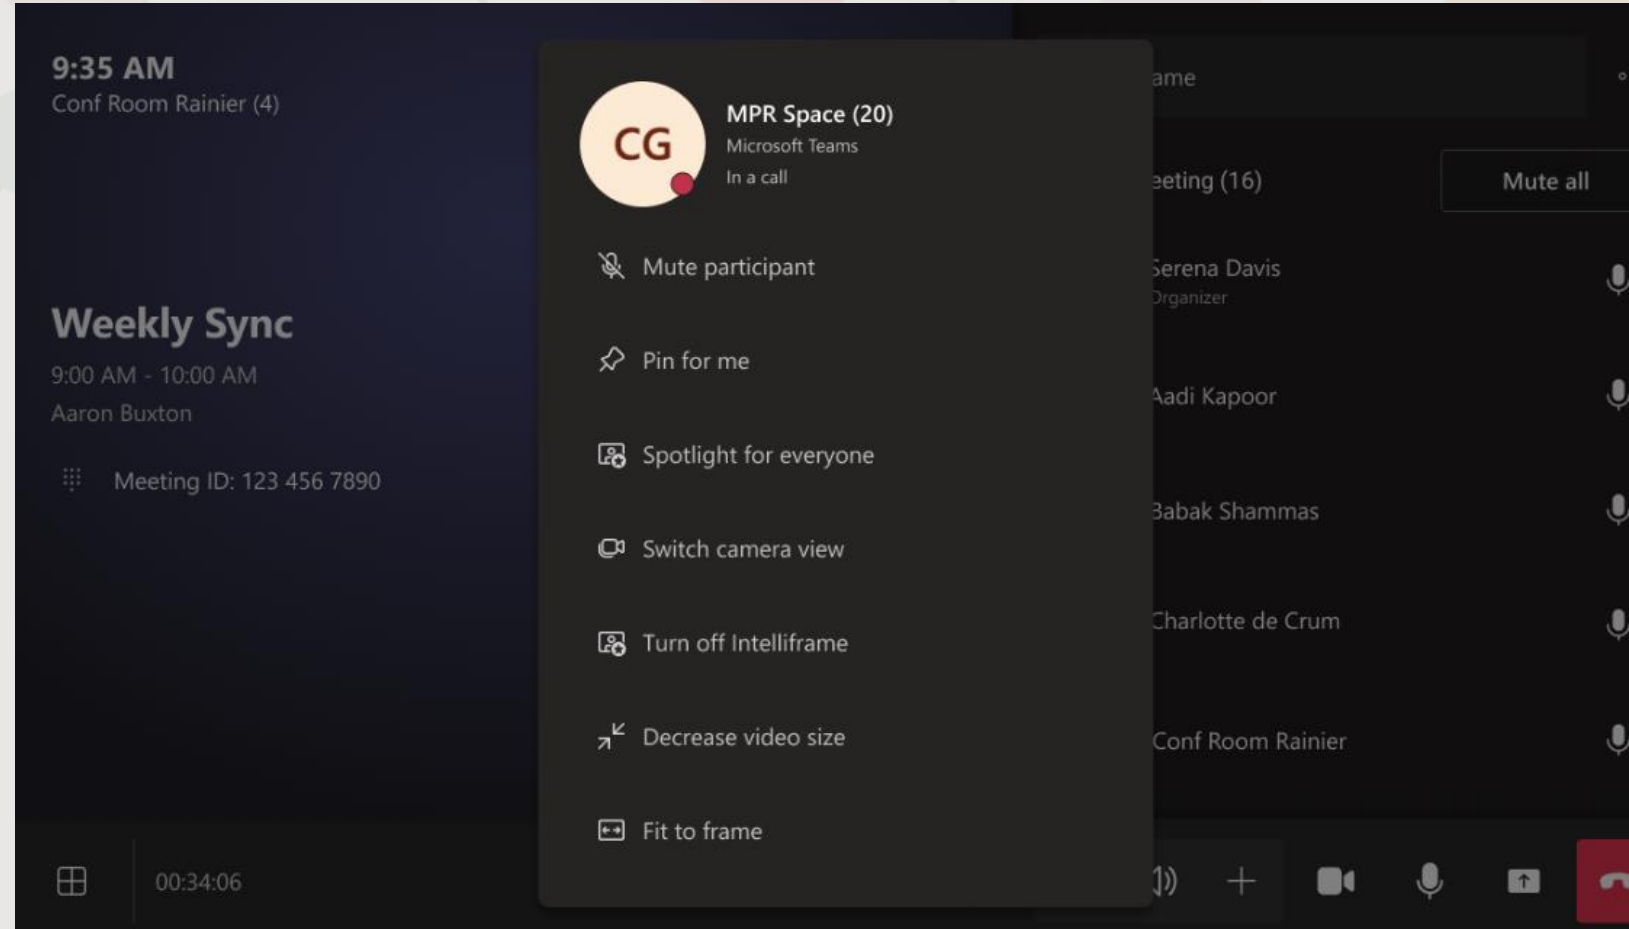

If you haven't enrolled, you'll get an in-product prompt to opt-in and enroll your voice profile simply by speaking in a meeting.

Admins can enable or disable this feature for their organization.

Camera view switching in multi-camera Teams Rooms on Windows

When in a meeting with another Teams Rooms on Windows that has multiple cameras, you can switch camera views in that room via the participant panel on the console, or video tile on a touch board, to optimize your views.

Teams multiple phone number: SUSPENDED!

Microsoft Teams: Multiple phone number assignment to a single user on Teams Phone Devices

ROLLOUT START
April 2026

Microsoft Teams

We are not releasing this feature at this time. We apologize for any inconvenience this may cause. Multi-line support allows a single Teams Phone Device to handle multiple phone numbers assigned to the same user account, enabling users to make and receive calls from any of their numbers without switching accounts or devices. This capability brings flexibility and efficiency to scenarios where individuals manage multiple roles, regions, or responsibilities.

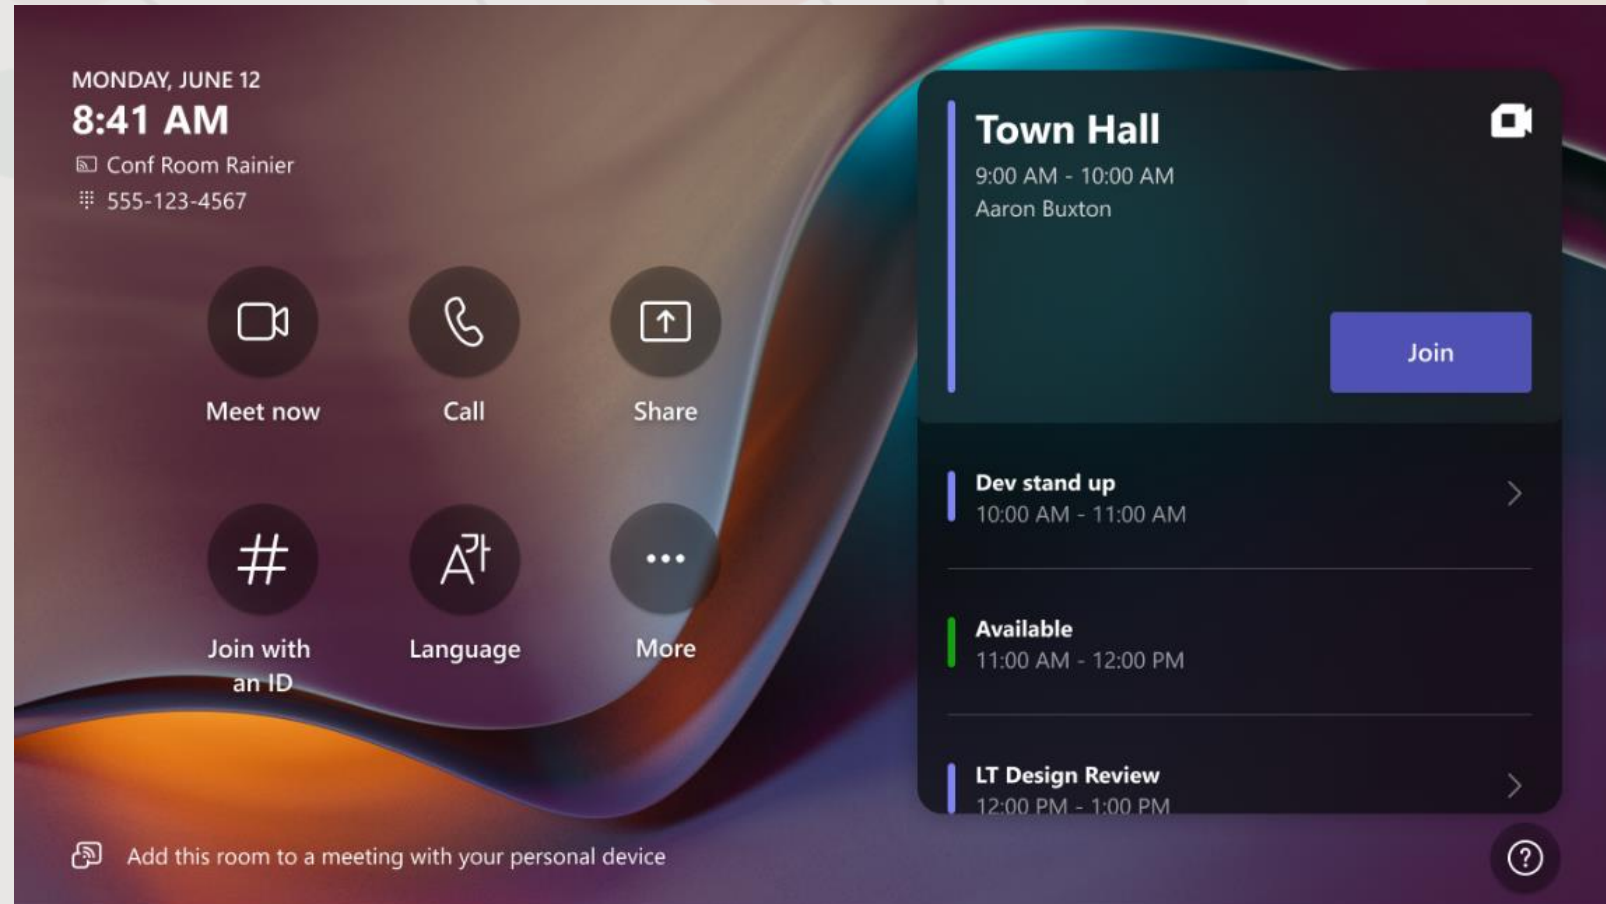

Roadmap ID	Cloud instances(s)	Platform(s)	Release phases(s)
553590	Worldwide (Standard Multi-Tenant)	Android	General Availability

Added to roadmap: 02/06/2026 | Last modified: 02/10/2026

MTRoW: Two-way Direct Guest Join (DGJ) between Google Meet and Teams Rooms

Organizations now have expanded meeting interoperability with two-way Direct Guest Join (DGJ) between Google Meet and Teams meetings. Teams Rooms on Windows devices can join Google Meet meetings and Google Meet devices can join Teams meetings. Users can join with one click through the calendar or by meeting ID.

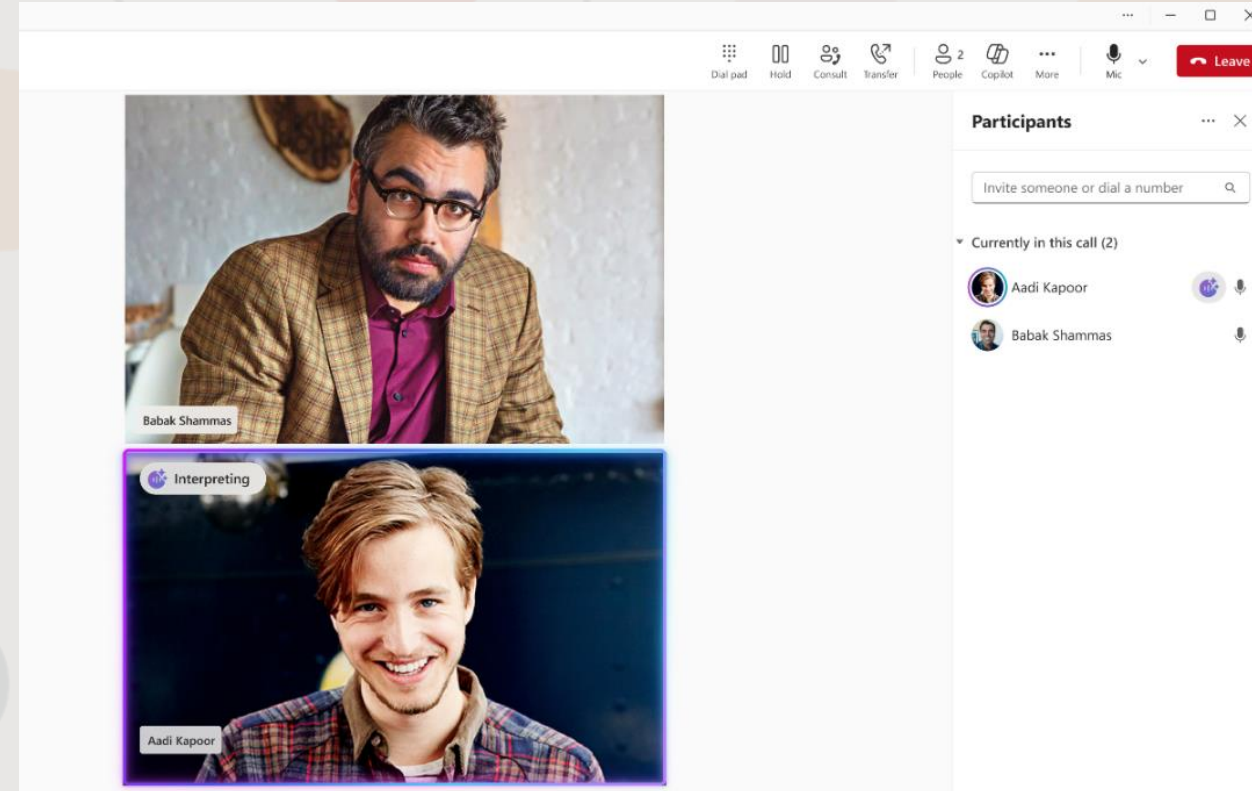

Teams Phone: Interpreter in Teams Phone

Interpreter, currently available in Teams meetings, is now expanding to Teams Phone to support calls made between Teams users—VoIP calls.

Interpreter enables real-time speech-to-speech interpretation in up to nine languages, allowing participants to speak and listen in their preferred language. Interpreter helps eliminate language barriers and fosters seamless collaboration across global teams.

For a more inclusive experience, users can also opt to have Interpreter simulate their personal voice. Today, Interpreter works for VoIP calls only.

Teams events

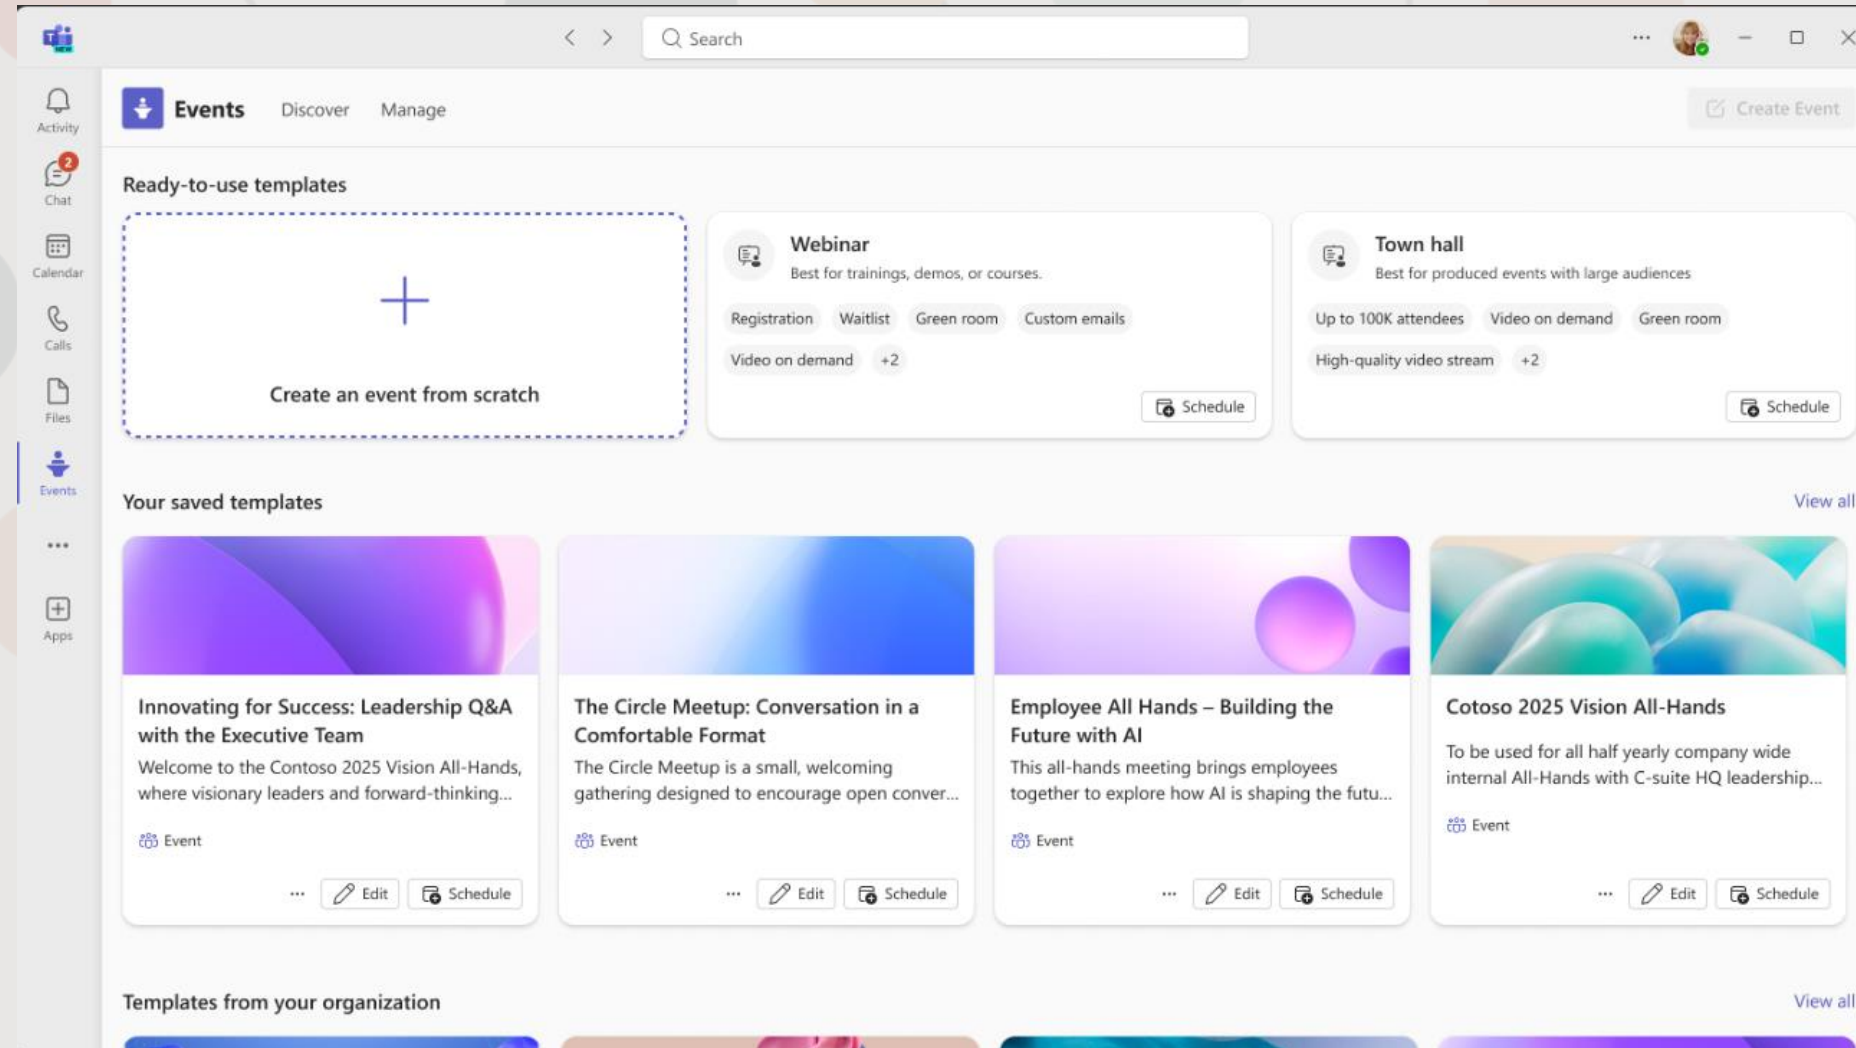

The new Teams events experience brings discovery, creation, and management into a single, centralized workflow.

Organizers can configure events through a flexible creation flow that supports a wide range of interaction, registration, and branding options without being constrained by event type.

Discover **Teams events**

Teams events

The Meet app becomes the dedicated home for events in Teams, featuring a new event creation flow that gives organizers more flexibility and control when setting up their events.

Teams events

Organizers can customize experiences such as audience interaction (attendee camera feeds, raise hands, polls, etc.), registration control, and event scale.

The new event creation experience no longer constrains individual features to a particular event type, replaced by a dynamic scheduling flow that gives organizers increased flexibility to tailor the event experience to specific audiences and goals.

The screenshot displays the 'What kind of experience fits this event?' section of the Microsoft Teams event creation interface. It features three main experience options: Collaborative (selected), Broadcast, and Immersive. Below these, the 'Participation' section is expanded, showing settings for event capacity, audience interaction features, and event chat. The 'Event capacity' is set to 20,000 attendees. Under 'Allow mic for attendees', 'Allow reactions', and 'Allow polls' are checked. Under 'Allow camera for attendees', 'Allow raise hands', and 'Allow event group chat' are checked. The 'Event chat' is set to 'In meeting only'. The 'Allow Q&A' toggle is turned on, with a link to 'Learn about Q&A' and a 'Customize Q&A options' button. At the bottom, there is an 'Advanced options' dropdown and a 'Screen setup' section with an 'All options' button.

What kind of experience fits this event? Standard

Collaborative ☒
Presenters share content. You decide how attendees participate and what they'll see on screen.
Up to 1,000 attendees

Broadcast ☐
Attendees watch a livestream with mics and cameras off.
Up to 100,000 attendees

Immersive ☐
Attendees join as avatars in a 3-D interactive environment.
Up to 300 attendees

Participation

Event capacity
This limits how many people can register and join the event. If waitlist is on, people who register after the capacity is reached will be waitlisted.

Teams events

The Discover tab is where organizers and attendees can find and track events, without relying solely on calendar invitations.

Users can view events they're registered for, find and register for new events, and catch up on recordings of past events. The Discover tab gives organizers, registrants, and attendees a single place to stay connected to their events.

New capabilities give event organizers more control and flexibility

In addition to the new unified experience, Teams events is adding capabilities to streamline setup and drive attendance:

- New delegate and **shared mailbox support** enables authorized users to schedule and manage events on behalf of the principal organizer. This helps teams collaborate more naturally when coordinating large or recurring events.
- Dedicated event details pages make it easy for organizers to view all elements related to the event, including built-in Q&A, and the ability to save customizations as templates for future use.
- Support for custom domains for event emails improves deliverability and helps invitations and reminders avoid spam filters, while offering additional event branding.
- Enhanced co-organizer editing and management controls make it easier to share responsibilities throughout the event lifecycle, ensuring a consistent management experience even as teams grow and roles evolve.

Teams live events retirement

Today, we're announcing the retirement of Microsoft Teams live events and the associated Microsoft Graph APIs used to create Teams live events. This change will go into effect **June 30, 2026**, as part of our ongoing effort to continue to modernize our event experiences and deliver a more powerful and flexible solution for large-scale communications.

While Teams live events will no longer be available to schedule after the retirement date, Microsoft will honor all live events already scheduled through February 28, 2027. Customers can continue to run those events as planned.

As we look ahead, we encourage customers to transition to newly-announced Teams events experience, which provides a centralized, end-to-end experience for digital and hybrid events.

Passwordless Resource Accounts

Moving from passwords on resource accounts (which can be a problem with password cycling policies) to key-based exchange with automatic rotation.

Much more secure, especially as we get more AI capabilities in the room.

Public preview March for Entra ID cloud accounts, April for on-prem, target GA June 2026.

A dedicated identity specifically designed for resources rather than individuals

Core technology Change from username & password authentication to secure key-based authentication.

Keys are secured and rotated automatically without admin intervention.

Passwordless Resource Accounts

Moving from passwords on resource accounts (which can be a problem with password cycling policies) to key-based exchange with automatic rotation.

Much more secure, especially as we get more AI capabilities in the room.

Public preview March for Entra ID cloud accounts, April for on-prem, target GA June 2026.

Why transition to resource accounts?

Enhanced security posture

- ✓ Eliminates need for passwords residing on devices.
- ✓ Secured key-based authentication removes the risk of password theft or phishing.

Increased reliability

- ✓ Devices can automatically re-sign in after network outages or reboots.
- ✓ 'Sign-in required' errors are handled by the system, ensuring rooms are ready for meetings.

Reduced admin overhead

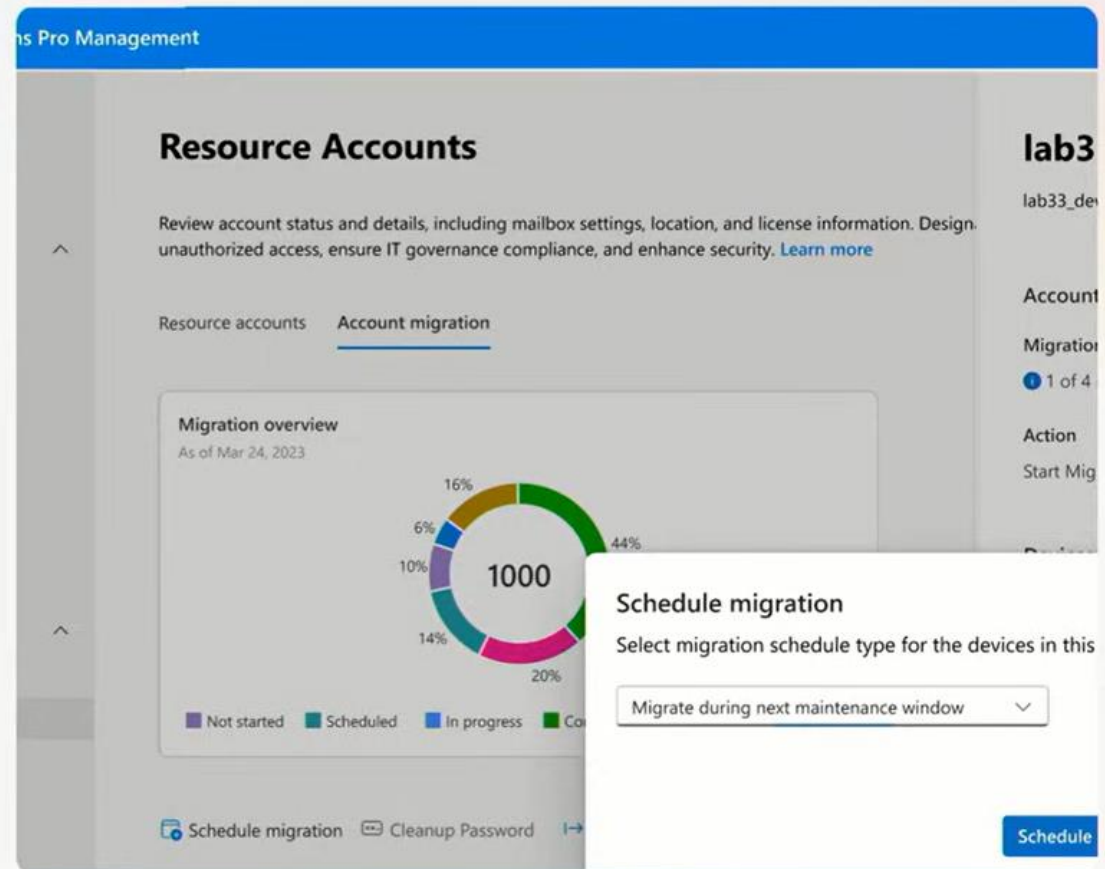

- ✓ Removes the need for manual password management and rotation.
- ✓ Reduces technician dispatch for simple authentication failures.

Passwordless Resource Accounts

Tools for managing transition in the Pro Management portal

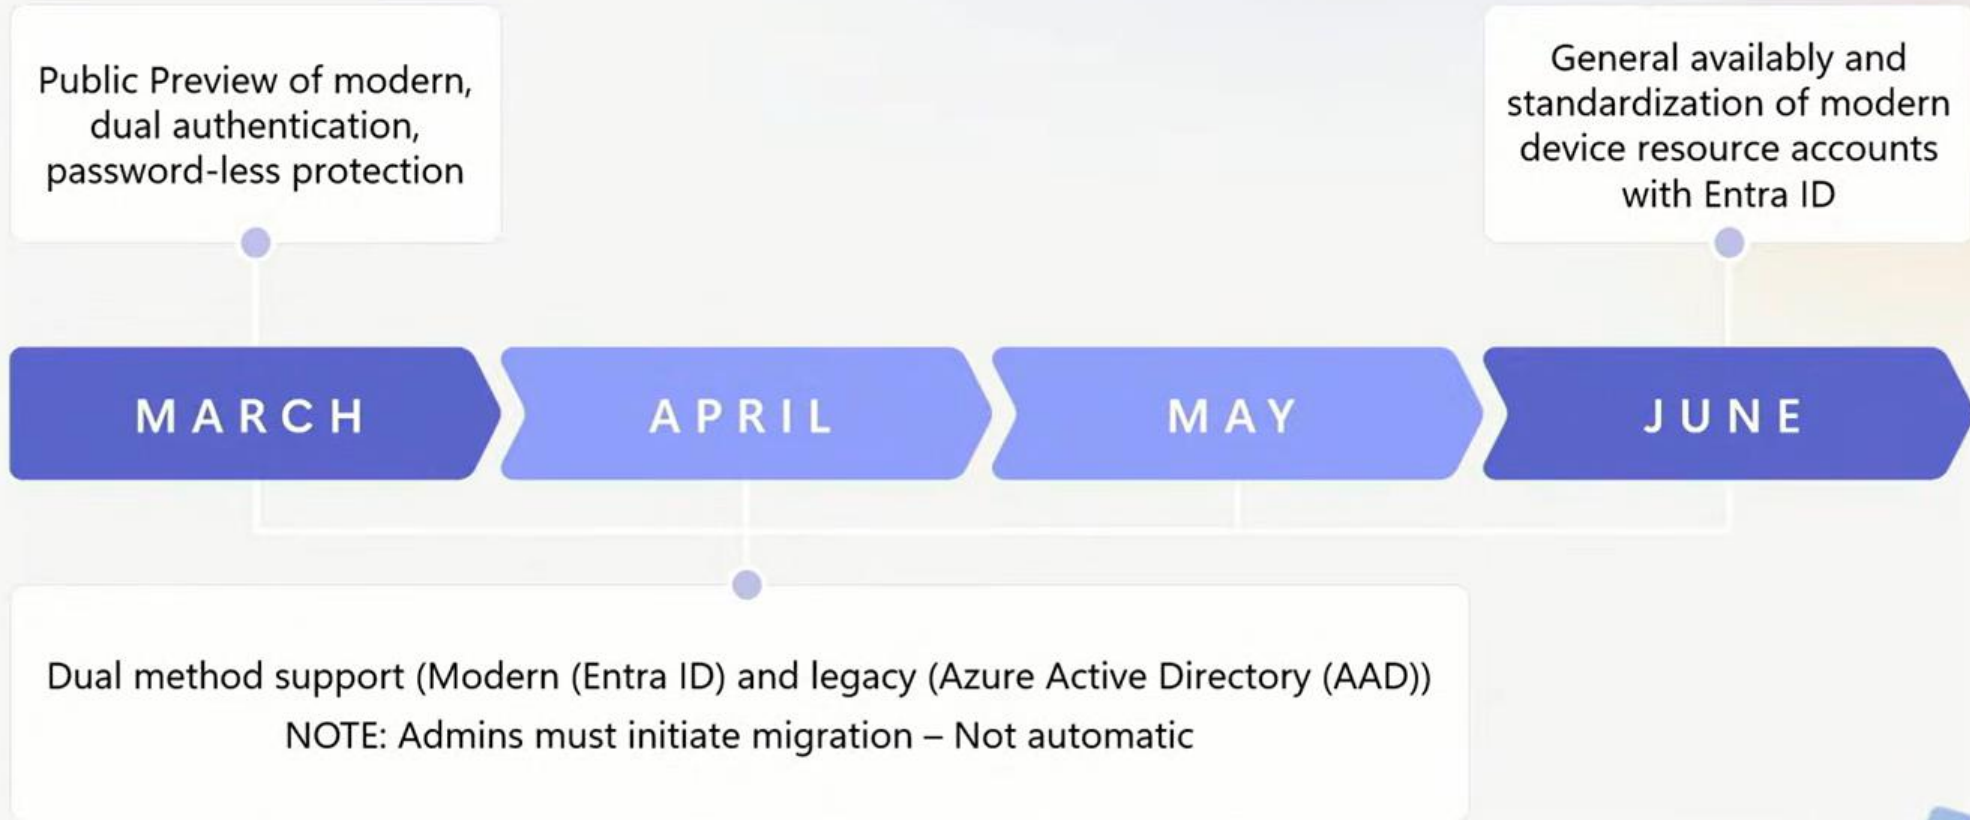

New account migration dashboard

- View real-time status of device fleet (Migrated, In Progress, Scheduled, Failed).
- The system automatically checks readiness based on ~10 criteria, including:
 - OS Version
 - Teams App Version
 - Firmware status
 - Room Health status
- View specific reasons why a device or account is ineligible for migration (e.g., "Room is offline").

Passwordless Resource Accounts

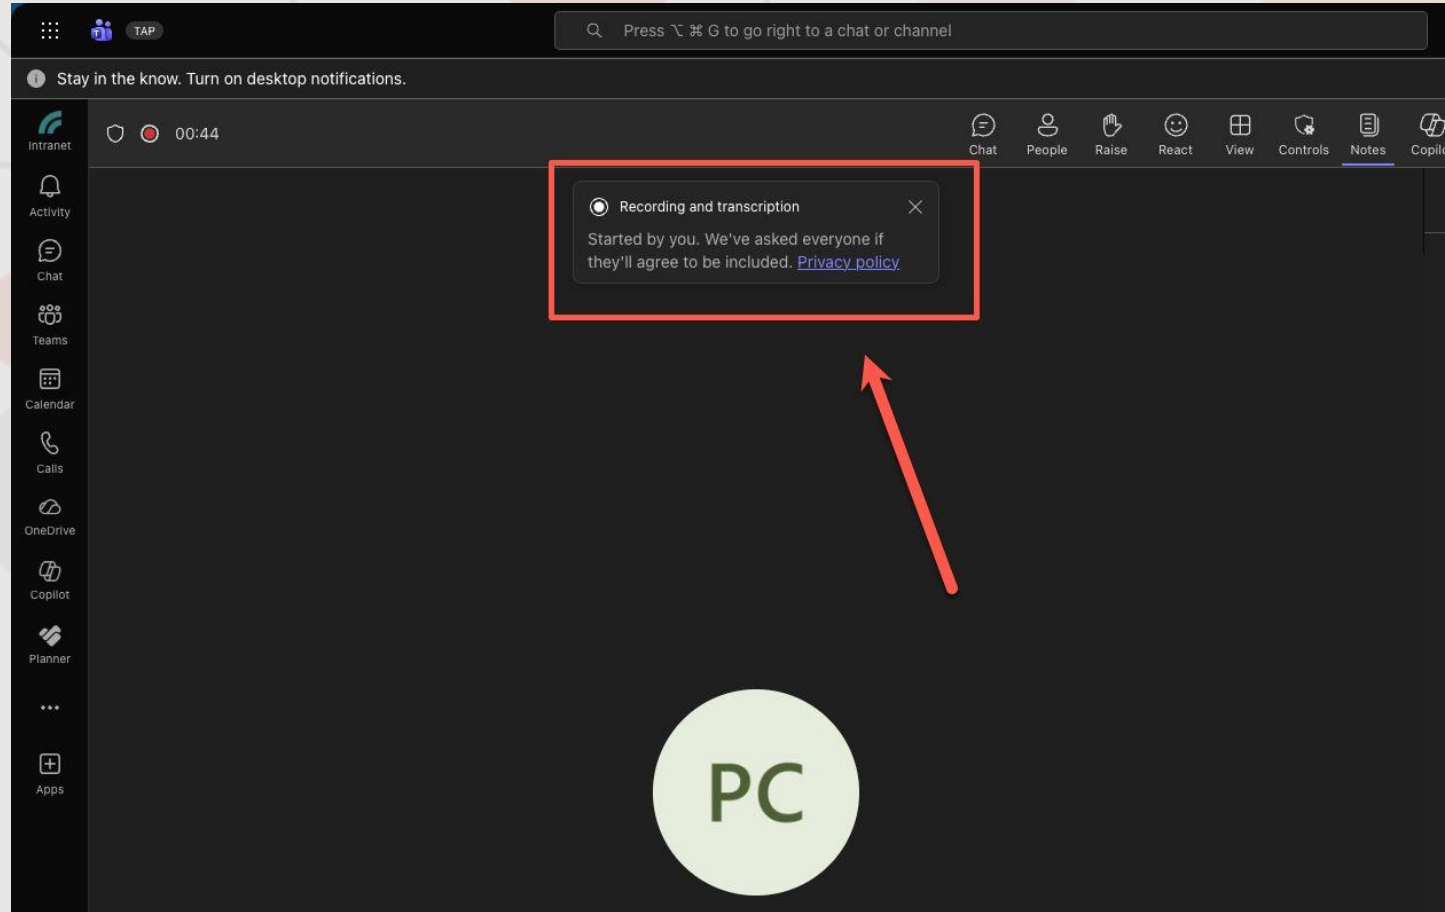

The migration journey

Custom recording notices are coming to Teams

Your custom message must be concise. You get 200 characters per language/scenario. CSV Management: You'll need to download a CSV template from the Teams Admin Center, fill in your strings for different languages, and upload it back. Policy-Based: This is assigned via Meeting Policies.

You can have different notices for different departments or user groups. Privacy Link: You can finally point participants directly to your organization's privacy statement instead of just the generic Microsoft one.

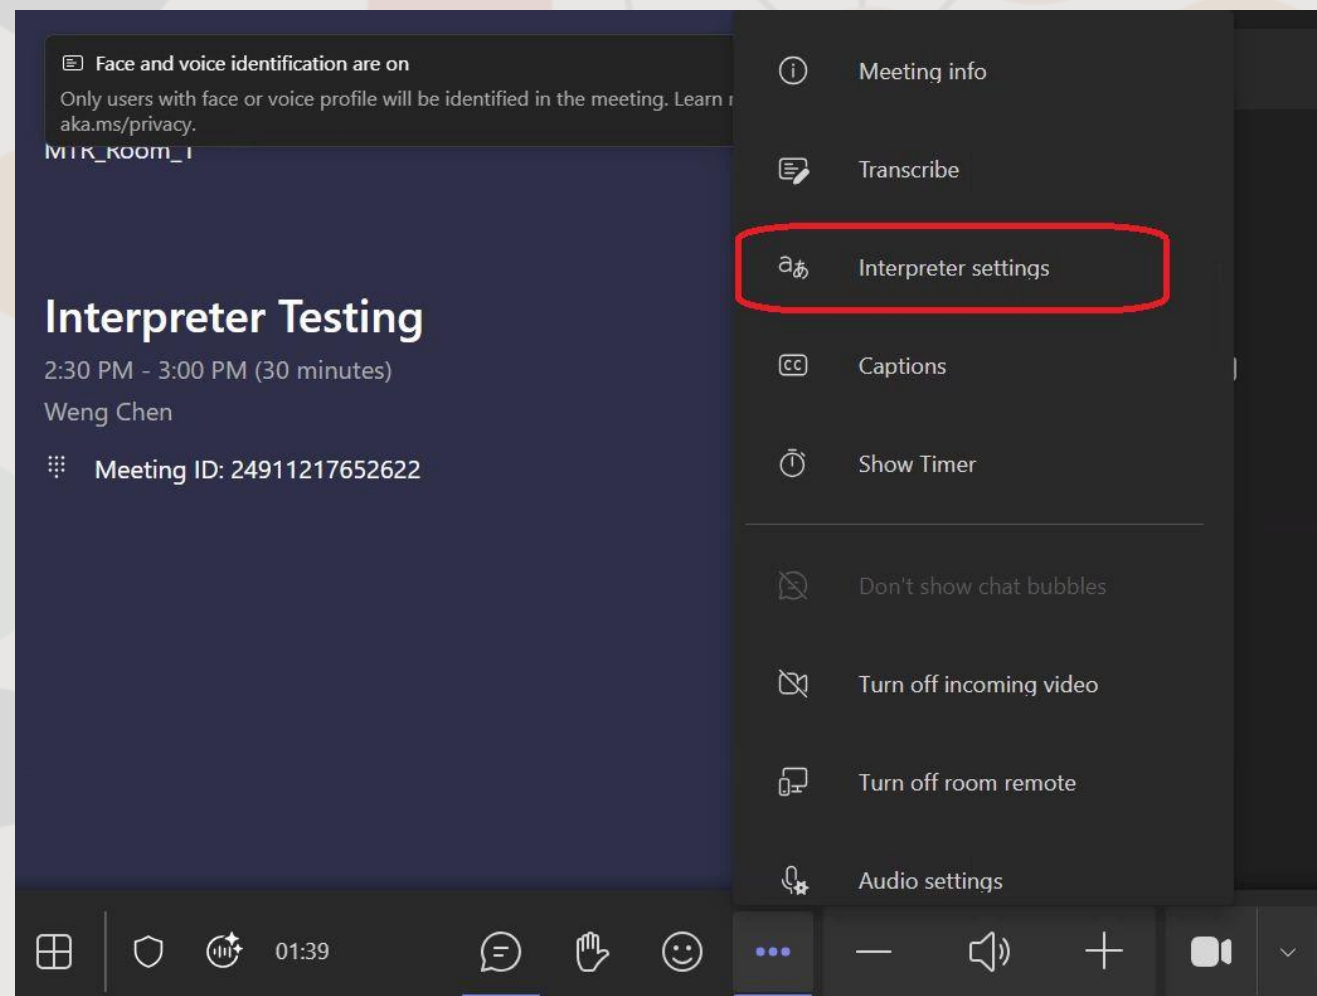

Interpreter Agent support in MTR on Windows

The Interpreter agent is now available for MTRoW devices with Teams Rooms Pro licensing. This capability provides real-time interpretation across up to 9 languages, allowing participants to speak and listen in their preferred language. The feature includes an optional voice simulation capability for a more personalized meeting experience.

Key points:

- a. Each Teams Rooms Pro license
- b. Each license includes 20 hours of interpretation per room account per month.
- c. Interpreter Agent is managed through Teams meeting policies, or PowerShell.
- d. The Meeting Host needs to enable the Interpreter Agent in the call.
- e. Current Supported languages: English, French, German, Italian, Japanese, Chinese (Mandarin), Korean, Portuguese, and Spanish.
- f. The tenant administrators should configure the meeting policy settings for Interpreter functionality.

Teams Rooms Management enhanced issue detection and auto-remediation

Rolling out from April 2026, initially for Teams Rooms on Windows, Teams Rooms Pro Management will:

- Proactively monitor audio, video, and display signals to detect issues in meeting spaces
- Automatically remediate common issues through software fixes, config changes, or device resets during nightly maintenance
- Reduce manual troubleshooting for IT admins

Microsoft Teams: Enhanced issue detection in Teams Rooms on Windows and auto-remediation with Teams Rooms Pro Management.

■ □ □ IN DEVELOPMENT

ROLLOUT START
April 2026

Microsoft Teams

Teams Rooms on Windows proactively monitors room audio, video, and display signals to detect issues in meeting spaces. Teams Rooms Pro Management automatically remediates common issues that can be resolved through software, configuration changes, or device resets during nightly maintenance. This ensures users have reliable, ready-to-use meeting rooms, while IT admins benefit from reduced manual troubleshooting and increased uptime. Available for Teams Rooms Pro-licensed rooms.

DLP policies will soon be able to block Copilot processing of sensitivity-labeled files, across all storage locations.

DLP policies will be able to block Copilot processing of sensitivity-labeled files in all storage locations

MC1234661
Stay informed
Published date: February 19, 2026

We're expanding Microsoft Purview Data Loss Prevention (DLP) controls to provide broader governance for Microsoft 365 Copilot. With this update, DLP policies that prevent Copilot from processing content based on sensitivity labels will now apply to Word, Excel, and PowerPoint files regardless of where they are stored. This enhancement responds to customer feedback requesting more consistent protection coverage across local and cloud-based file locations.

This feature is associated with Microsoft 365 Roadmap ID [557255](#).

When this will happen

- **General Availability (Worldwide and GCC):** Rollout will begin in **late March 2026** and is expected to complete by **late April 2026**.

How this affects your organization

Who is affected

- Organizations using Microsoft Purview DLP to restrict Copilot processing of sensitivity-labeled content
- Admins who manage Purview DLP policies
- Users working with Microsoft 365 Copilot in Word, Excel, or PowerPoint

What will happen

- DLP policies that restrict Copilot from processing sensitivity-labeled files will apply to Word, Excel, and PowerPoint files in **all storage locations**, including:
 - SharePoint
 - OneDrive for Business
 - Local device storage
 - Other storage locations accessible to Office apps
- When a DLP policy blocks Copilot processing, Copilot will not process the file's content in Word, Excel, or PowerPoint.
- Existing DLP policies will continue to function normally; **no policy migration or reconfiguration** is required.
- The feature will be **on by default** for tenants with relevant DLP rules configured.
- Users will see **consistent DLP enforcement** when invoking Copilot in *supported Microsoft 365 apps*.

Implementation detail:

This update does **not** modify Copilot capabilities. Instead, Office clients and AugLoop have been enhanced so AugLoop can read a file's sensitivity label directly from the client. Today, AugLoop retrieves the label by calling Microsoft Graph using the file's SharePoint or OneDrive URL, which limits DLP enforcement to files stored in OneDrive and SharePoint. By enabling the client to provide the label, DLP enforcement now applies uniformly across all storage locations, including local files.

What you can do to prepare

No action is required to enable this feature.

If your organization uses DLP controls for Copilot, you may optionally:

- Review existing DLP policies that include sensitivity-label-based restrictions
- Update internal documentation or helpdesk guidance if needed
- Communicate this enhancement to relevant security or compliance teams

Outlook e MDO

MTA-STS e SMTP DANE configurabili nei connettori

MTA-STS and SMTP DANE mode on connectors

 Archive  Share  Copy link  Mark as unread

Summary

Exchange Online will let admins control MTA-STS and SMTP DANE validation modes on outbound connectors starting late February 2026. Modes include Opportunistic (default), None (disables validation), and Mandatory (enforces SMTP DANE). No action is needed unless changes to validation behavior are desired.

Is this summary helpful?  

Introduction

This feature provides admin's control over Outbound MTA-STS and SMTP DANE validations for emails sent over outbound connectors in *Exchange Online*, allowing organizations to choose how strictly the service enforces MTA-STS and SMTP DANE when sending mail to external domains.

Admins will be able to configure each outbound connector to use the following modes:

1. **Opportunistic default**, applies to both MTA-STS and SMTP DANE. Opportunistic Mode means Exchange Online will attempt to perform validations for both MTA-STS and SMTP DANE but still sends the message if the destination doesn't support either protocol.
2. **None**, which applies to both MTA-STS and SMTP DANE and disables the validation entirely, therefore **reducing the security of emails sent over that connector** by removing MTA-STS and/or SMTP DANE protections designed to prevent downgrade attacks and spoofed MX redirection.
3. **Mandatory**, applies only to SMTP DANE and enforces full SMTP DANE and DNSSEC validation, requiring the destination to support Inbound SMTP DANE with DNSSEC and queueing mail if the validation does not succeed.

When this will happen

General Availability (Worldwide): We will begin rolling out in **late February 2026** and expect to complete by **late March 2026**.

Occhio alla RootCA dei certificati DigiCert per ambienti ibridi

(Updated) Trust DigiCert Global Root G2 certificate authority to avoid Exchange Online email disruption

Archive

Share

Copy link

Mark as unread

⚠️ Action required by Mar 15, 2026

Summary

To avoid Exchange Online email disruption by March 15, 2026, organizations must trust the DigiCert Global Root G2 certificate authority. This affects those with disabled Windows CTL updates or using older/custom runtimes. Systems with default Windows CTL Updater enabled require no action.

Is this summary helpful?

👍👎

Updated February 4, 2026: We have updated the timeline. We've been notified that some email providers may distrust the DigiCert G1 root on April 15, which could result in broad ecosystem-wide email impact. To ensure Exchange Online can rotate certificates ahead of this event, customers must trust the DigiCert Global Root G2 certificate authority by March 15 (previously April 30). Thank you for your patience.

Introduction

Action might be required to avoid service disruption. To maintain secure and uninterrupted mail flow with Exchange Online, organizations must ensure their servers and clients trust the **DigiCert Global Root G2 Certificate Authority (CA)** and its subordinate CAs.
