News from Copilot e M365

Novità in arrivo in Planner

- Maggiore integrazione con Copilot
- Unified Plan Type — no more Basic vs Premium vs Project. One plan type, features light up by licence. Rolling out now, automatic, nothing for IT to do.
- Custom columns for all paid users — no longer Premium-gated, and exposed via API for reporting.
- Dependencies across all plans — including start-start, finish-finish, start-finish. Licence-dependent, but no more plan-type confusion.
- Facilitator attaches to existing plans — writes tasks and generated docs into your team's plan instead of spinning up a new one per meeting.
- Planner in private and shared channels
- Goals in Basic plans + higher limits — no longer Premium-only, 10-goal cap being raised.
- Status reports in the agent — rich charts and summaries, shipping in the next couple of months.
- Any Copilot agent inside Planner — publish Copilot Studio agents to the catalog, call them from Planner.
- My Tasks view — simplified personal surface with starring, filter/sort. First step of the Planner/To Do merge.

Reference and thanks to Tom Arbuthnot

MC1304290 - 2026 Microsoft 365 Packaging Update

Part of the 2026 M365 Packaging and Pricing Update, rolling out mid-June 2026 and completing by 1 August 2026.

Defender for Office 365 Plan 1: always-on, cannot be disabled

- **Safe Links:** URLs in email, Teams, and Office apps rewritten and scanned at time of click.
- **Safe Attachments:** Attachments detonated in a sandbox before delivery. Covers email, SharePoint, OneDrive, and Teams files.
- **Anti-phishing + URL time-of-click:** Impersonation/spoofing detection plus real-time URL scanning. New alerts will appear in the Defender portal.
- **Policies can be supplemented or overridden** (via Standard/Strict preset or custom policy) but never disabled. Built-in protection has lowest precedence — existing stronger policies take priority; older weakened custom policies may silently override it.

Also included but not configured by default

- Intune: Remote Help, Advanced Analytics, Plan 2 (MAM Tunnel, FOTA, specialty devices), Endpoint Privilege Management, Cloud PKI, Enterprise App Management
- Exchange Online: +50 GB mailbox storage per user

MC1304290 - What Cannot be Disabled and What to Do

What admins can control

- **Exclusions:** Specific users, groups, or domains can be excluded from the built-in policy via the Defender portal. Use sparingly, every exclusion is a permanent click-through exception.
- **Override with Standard or Strict preset:** Assigning users to Standard or Strict presets removes them from built-in policy scope. Recommended approach for most organizations.
- **Third-party mail gateways (Mimecast, Proofpoint):** Pre-rewriting URLs upstream can prevent Safe Links from processing links at all. Configure Enhanced Filtering for Connectors in EOP to restore proper mail flow.

Recommended admin actions before mid-June

- Review existing Safe Links/Attachments custom policies , check for weakened settings (e.g. AllowClickThrough = true) that would override the new baseline.
- Set up quarantine notifications before go-live, users need to be able to review and release false positives, or the service desk gets the queue.
- If using a third-party gateway, configure Enhanced Filtering for Connectors in EOP and review mail flow rules to avoid double-scanning conflicts.
- Run the Configuration Analyzer (security.microsoft.com) to compare current policies against Standard/Strict baselines before rollout.

MC1310684 - OneDrive Storage Quota Enforcement

What is changing

Microsoft is closing a gap: OneDrive quotas were not always validated against the user's actual license. From late May they will be and any user over their limit goes **read-only**.

Impact on affected users

- Cannot upload, edit, or sync files until resolved
- OneDrive sync client stops: offline changes not uploaded, risking work loss
- No clear error message: users and helpdesk may misread it as a permissions issue

Who is at risk

- Users whose quota was **manually set above their licence allowance** via PowerShell
- Most commercial tenants: **low risk** if quotas have not been customised. Users within their limit are unaffected.

MC1310684 - OneDrive Storage Quota Enforcement

What to do now

1. Run the official PnP Graph script (linked in MC1310684) to identify users over quota. It uses Microsoft Graph only (no SPO Management Shell required).

<https://pnp.github.io/script-samples/onedrive-overquota-report/README.html?tabs=graphps>

2. For affected users: upgrade the license or ask the user to clear space before June.
3. Brief the helpdesk: read-only OneDrive is a quota issue, not a permissions fault.
4. Check for unlicensed users with a OneDrive (e.g. retained leavers); the script flags these too, as any storage use exceeds a zero-license entitlement.

MC1310687 - Authoritative Sites for Copilot

What it is

Admins can now mark specific SharePoint sites as **authoritative**, telling Copilot to prioritize content from those sites in Chat responses and Search results. Requires M365 Copilot (Premium) licence. Off by default.

Why it matters

- Copilot previously had no way to distinguish the canonical version of a file from a copy scattered in OneDrive or another site. This gives it positive direction rather than just blocking via Restricted Content Discovery.
- Results from authoritative sites surface at the top, labelled “**From your organization**” with a trust indicator. No changes to existing permissions.

Important caveat

Not a silver bullet. It will not fix poor permissions, site sprawl, or stale content. Authoritative sites surface the best content faster, but only if that content is well-maintained and correctly permissioned in the first place.

MC1310687 - Authoritative Sites for Copilot

How to configure (PowerShell only for now)

Set-SPOSite -Identity <url> -IsAuthoritative \$true

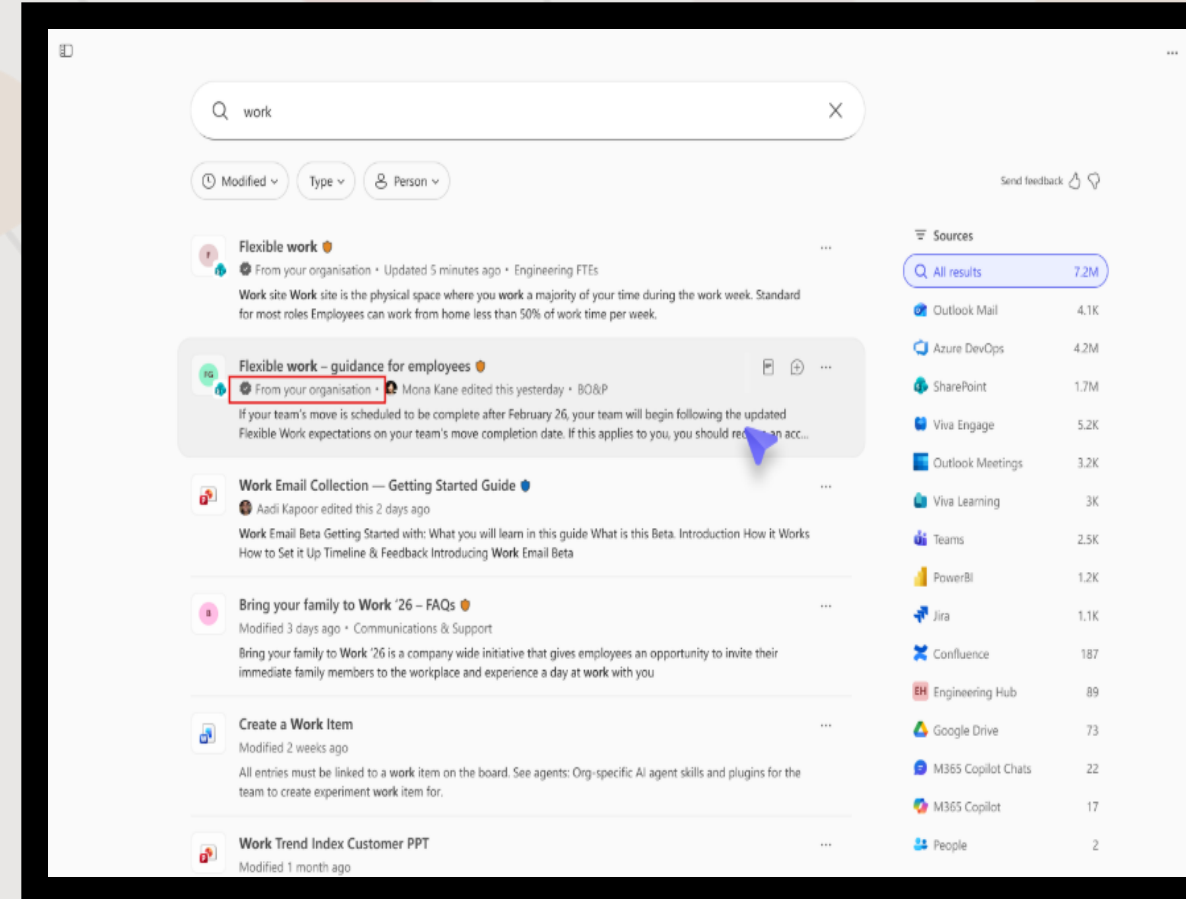

Requires latest SPO Management Shell. Allow a few hours for M365 Search to register the change. Admin Centre UI expected to follow in a future update.

Good candidates to mark authoritative

- HR policies, Legal, Internal Comms/Intranet news
- IT documentation, Security standards, Finance procedures
- Any site that holds the **single source of truth** for a topic where duplicate copies exist elsewhere in the tenant

Rollout

- **Targeted Release:** mid-May, completing late May 2026
- **General Availability:** mid-to-late June 2026

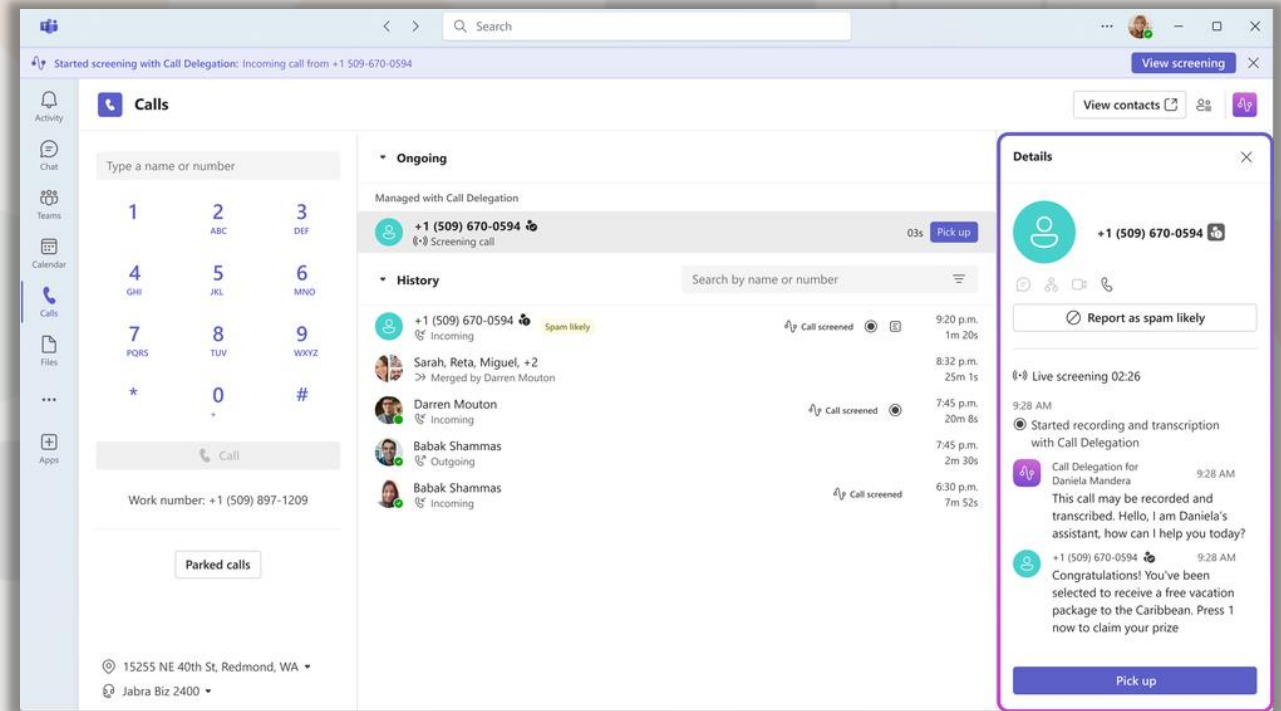

News from Teams e
Teams Phone

Copilot call delegation

Microsoft 365 Copilot can now answer incoming Teams calls and schedule follow-ups on your behalf, helping you stay focused without missing what matters.

- **Smart call handling:** Copilot answers incoming calls when you're busy and gathers context about who's calling and why.
- **Decision support:** Caller context is shared with you so you can choose to pick up or let Copilot continue.
- **Automated follow-up:** Copilot can schedule follow-up appointments via Microsoft Bookings so important callers aren't forgotten.
- **Frontier early access:** Available now to users with a Microsoft 365 Copilot license through the [Frontier program](#).

Copilot call delegation

Chiamate > **Gestisci Operatore personale**

Gestisci Operatore personale

Operatore personale è uno strumento basato sull'IA che può rispondere e instradare le chiamate per tuo conto. Filtra le chiamate spam, ti aiuta a pianificare chiamate di ritorno e riepiloga i messaggi vocali.

Abilita Operatore personale

Attivate ☒

Scegli la modalità di screening delle chiamate esterne

Esegui automaticamente lo screening delle chiamate

Scegli come vuoi eseguire lo screening delle chiamate interne

Non eseguire lo screening

Ricevi notifica di screening

Mostra una notifica ogni volta che Operatore personale risponde a una chiamata in arrivo

Attivate ☒

Ricevi chiamate da queste persone senza essere schermata da Operatore personale

Gestisci accesso prioritario

Scegli la lingua predefinita per il tuo Operatore personale

Italiano (Italia)

Avvia una conversazione per testare la qualità vocale e il comportamento di interazione

Effettua una chiamata di prova

Filtra le chiamate sospette di spam

Impedisci che le chiamate sospette di spam ti raggiungano lasciando che Operatore personale le rilevi e le filtri

Attivate ☒

Trascrizioni e registrazioni

Salva le registrazioni e le trascrizioni per le chiamate a cui l'Operatore personale ha risposto. Se si disattiva questa opzione, lo screening live verrà disabilitato per le chiamate.

Attivate ☒

Pianifica follow-up

Quando non sei disponibile, consenti ai chiamanti di riservare tempo nel tuo calendario per connettersi.

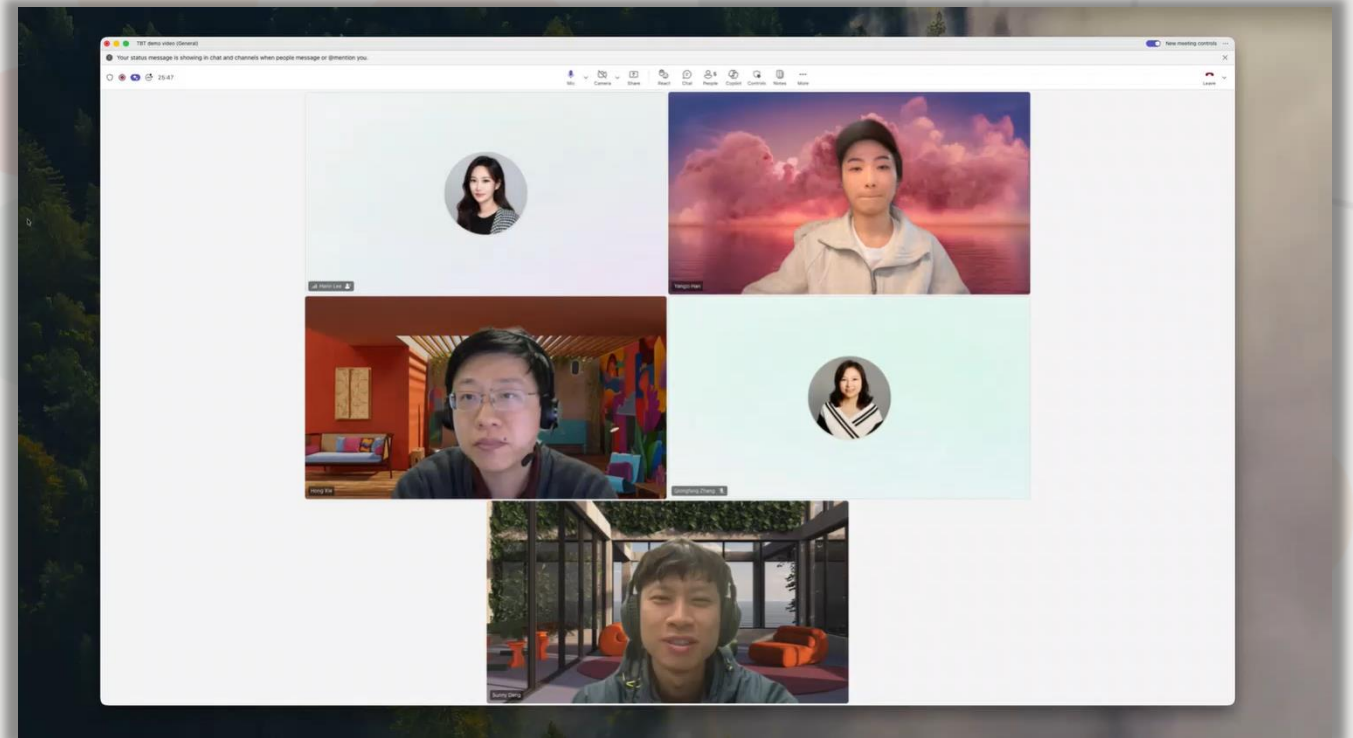

Gestisci calendario

Consecutive interpretation in Interpreter agent

Consecutive interpretation brings a new turn-based mode to Teams Interpreter, making bilingual meetings feel more like natural conversations.

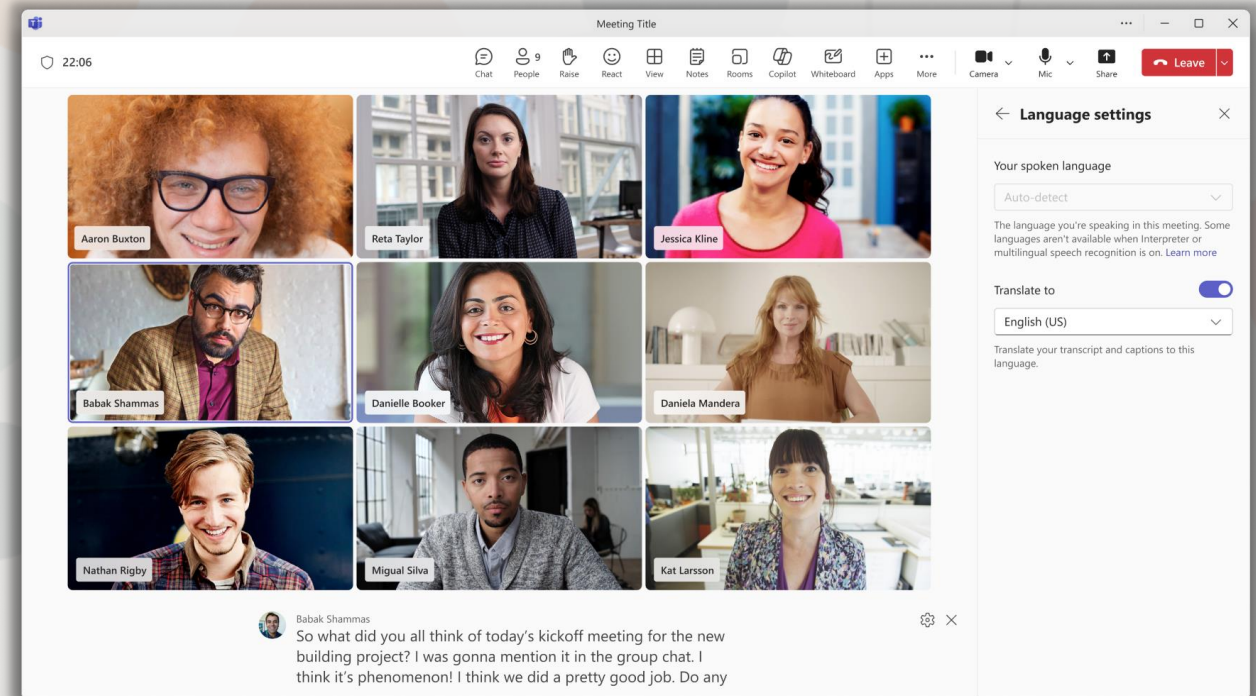

- **New mode:** Interpreter now offers consecutive translation that begins after each speaker finishes, alongside the existing real-time simultaneous mode.
- **Natural turn-taking:** The back-and-forth flow mirrors how people speak in multilingual conversations, reducing overlap and confusion.
- **On-stage Interpreter:** Interpreter appears on the meeting stage so everyone can see and hear the translation directly, improving engagement.

Spoken language detection is now automatic

Automatic spoken language detection in Teams improves multilingual meetings by identifying and updating each speaker's language in real time.

- **Automatic detection:** Teams detects each speaker's language automatically, removing the need for manual selection.
- **Real-time updates:** Language recognition updates dynamically as conversations evolve between speakers.
- **Improved accuracy:** Enhances the quality of live captions and transcripts in multilingual meetings.
- **Consistent experience:** Works across Interpreter and multilingual speech recognition settings for a more seamless meeting experience.

Teams Together Mode retiring on June 30, 2026

Microsoft is retiring Together Mode from all Teams meetings platforms on June 30, 2026. The feature, introduced during the pandemic to place participants in shared virtual environments, is being removed in favor of a leaner, higher-performance meeting infrastructure.

- **What is being removed:** The Together Mode toggle, all pre-built and custom scenes, personalised seat assignments, and organisation-branded scenes.
- **What replaces it:** Gallery view becomes the primary multi-participant layout, supporting up to 49 video tiles simultaneously with adaptive sizing based on device and network conditions. Branded backgrounds can be managed via the Teams Admin Centre.
- **Admin action required:** Update meeting templates, event runbooks, and training materials. Migrate any organization-branded Together Mode scenes to supported branded backgrounds. No admin policy exists to retain the feature after the cutoff.
- **Rollout timing:** Retirement follows Teams' standard safe-deployment process starting June 30. Targeted Release and Public Preview users may see the change earlier. Monitor Message Centre notification MC1296478 for platform-specific timelines.

MC1296478

Resize the top video gallery in Teams meetings

A resizable video gallery lets meeting participants balance shared content and visible faces during presentations on Windows and Mac.

- **Drag-to-resize:** Users can drag the divider between shared content and the video gallery to adjust the split.
- **More faces visible:** A larger gallery space helps everyone feel seen, even during all-hands or training sessions.
- **Flexible viewing:** Smaller meetings can favor the gallery, while content-heavy reviews can favor the presentation.
- **Cross-platform:** Available now on Teams desktop for Windows and Mac.

Preload video for Teams Events and Meetings

Microsoft Teams: Preloaded video for Teams Events and Meetings

☒ ☐ ☐ IN DEVELOPMENT

ROLLOUT START
June 2026

Microsoft Teams

Users can now upload videos directly into a Teams event or meeting from OneDrive from the "Manage view" options when an organizer has turned on Manage What Attendees See mode. This ensures a smoother high quality video playback with a more consistent experience for attendees.

MC1318125 - Teams: Quick Share for Images

Teams is adding a Quick Share option for images in chats, channels, and shared tabs. Users can share an image or copy its link directly from hover actions, right-click menus, and overflow menus. No admin action needed.

- **Enabled by default.** No new admin controls. Existing sharing and access permissions are unchanged.
- **Platform:** Desktop and Mac only.
- **Rollout:** Targeted Release early June, General Availability mid-to-late June 2026.
- **Admin action: none.** Consider a brief helpdesk heads-up ahead of the June rollout.

Sensitivity Label Policy exclusion

E' ora possibile creare SL Policy che lavorino per esclusione (Tutti tranne...)

Altra novità, ora si possono usare anche gruppi non mail-enabled e gruppi dinamici.

The screenshot displays the Microsoft Purview 'Edit policy' interface. On the left, a sidebar shows a progress list: 'Labels to publish' (checked), 'Admin units' (checked), 'Users and groups' (selected), 'Settings' (unchecked), 'Name' (unchecked), and 'Finish' (unchecked). The main area is a modal titled 'Add or exclude users, groups, and adaptive scopes (preview)'. It features three tabs: 'Include only specific' (Add or include specific users, groups, adaptive scopes), 'Exclude some from all' (Exclude some users, groups, adaptive scopes from all), and 'All' (All users, groups, adaptive scopes will be included). The 'Exclude some from all' tab is active. The modal content shows 'No users or groups added yet' with a large blue plus icon. Below the icon, it says 'Select "Add" to get started.' and there is a '+ Add' button. At the bottom right of the modal is a 'Save and close' button.

Vulnerabilità su Exchange Onprem esposto su internet

Addressing Exchange Server May 2026 vulnerability CVE-2026-42897

The_Exchange_Team Platinum Contributor

May 14, 2026

On May 14, 2026, Microsoft disclosed [CVE-2026-42897](#), a reported vulnerability affecting Exchange Outlook Web Access (OWA). An attacker could exploit this issue by sending a specially crafted email to a user. If the user opens the email in Outlook Web Access and certain interaction conditions are met, arbitrary JavaScript can be executed in the browser context.

- Coinvolge Exchange 2016, 2019 e Subscription Edition; Exchange Online non è impattato.
- Microsoft ha segnalato sfruttamento attivo in the wild.
- Al momento sono state pubblicate mitigazioni temporanee, in attesa di un aggiornamento definitivo per le versioni supportate:
 - Abilitare e lasciare attivo l'**Exchange Emergency Mitigation Service**: applica automaticamente una protezione tramite configurazione URL Rewrite sugli Exchange on-prem supportati.
 - Verificare che il servizio Windows sia abilitato:

```
Get-ExchangeServer | fl name,mitigation*
Name                               : EXCHANGESERVERNAME
MitigationsEnabled                  : True
MitigationsAppliedTime              : 5/17/2026 2:36:33 AM
MitigationsApplied                  : {PING1, M2.1.0}
MitigationsBlocked                  :
```
 - Se la mitigazione automatica non è utilizzabile, ad esempio in ambienti isolati, usare l'**Exchange On-premises Mitigation Tool (EOMT)** e applicare la mitigazione specifica su ogni server Exchange tramite Exchange Management Shell.

Change Optics Report in Exchange Online

Change Optics report for Exchange Online begins public preview

 Archive  Share  Copy link  Mark as unread

Summary

The Change Optics report for Exchange Online is in public preview, providing administrators visibility into email traffic affected by upcoming transport changes. It identifies onmicrosoft.com external traffic and Direct Send traffic, is enabled by default, requires no preparation, and does not impact mail flow or users.

Is this summary helpful?  

Introduction

We're announcing the **public preview** of the **Change Optics report for Exchange Online**, which is now available for all customers. This report helps Exchange administrators proactively identify email traffic that may be affected by upcoming service changes, enabling investigation and remediation ahead of enforcement.

When this will happen

- **Public preview:** The report is now rolled out for all customers. We plan to conduct the public preview for at least one month.
- **General availability (Worldwide):** Depending on feedback from the public preview, we may announce GA as **early as June 2026**.

Nuovo standard IETF per il DMARC datato 20 maggio 2026

- **Cambio di status importante:** DMARC non è più solo una specifica informativa, ma uno standard IETF “Standards Track / Proposed Standard”.
- **La specifica è ora divisa in più RFC:** RFC 9989 definisce il protocollo DMARC, RFC 9990 i report aggregati; il reporting viene quindi separato dal core per maggiore chiarezza operativa.
- **Compatibilità preservata:** il tag di versione resta v=DMARC1, quindi non esiste un “DMARC2” e i record DNS esistenti non vanno riscritti solo per il cambio di RFC.
- **Nuova gestione dell’Organizational Domain:** la specifica introduce una determinazione esplicita tramite algoritmo di discovery, riducendo la dipendenza storica dalla Public Suffix List nei flussi DMARC.
- **Arriva il tag np:** consente di definire una policy dedicata per i sottodomini inesistenti.

Ci rivediamo il...

**Venerdì 24 Luglio 2026
