News from Copilot and M365

New Icon, Name, and URL for Microsoft Copilot

Like other Microsoft 365 apps, Copilot is moving to a single app experience across personal and work accounts.

Users will see clearer visual indicators in the app to help distinguish which account they are logged into.

The app will adopt a simpler name and icon, and the web app URL will align more closely to Copilot. Security, compliance, privacy, and enterprise controls remain unchanged.

What's changing

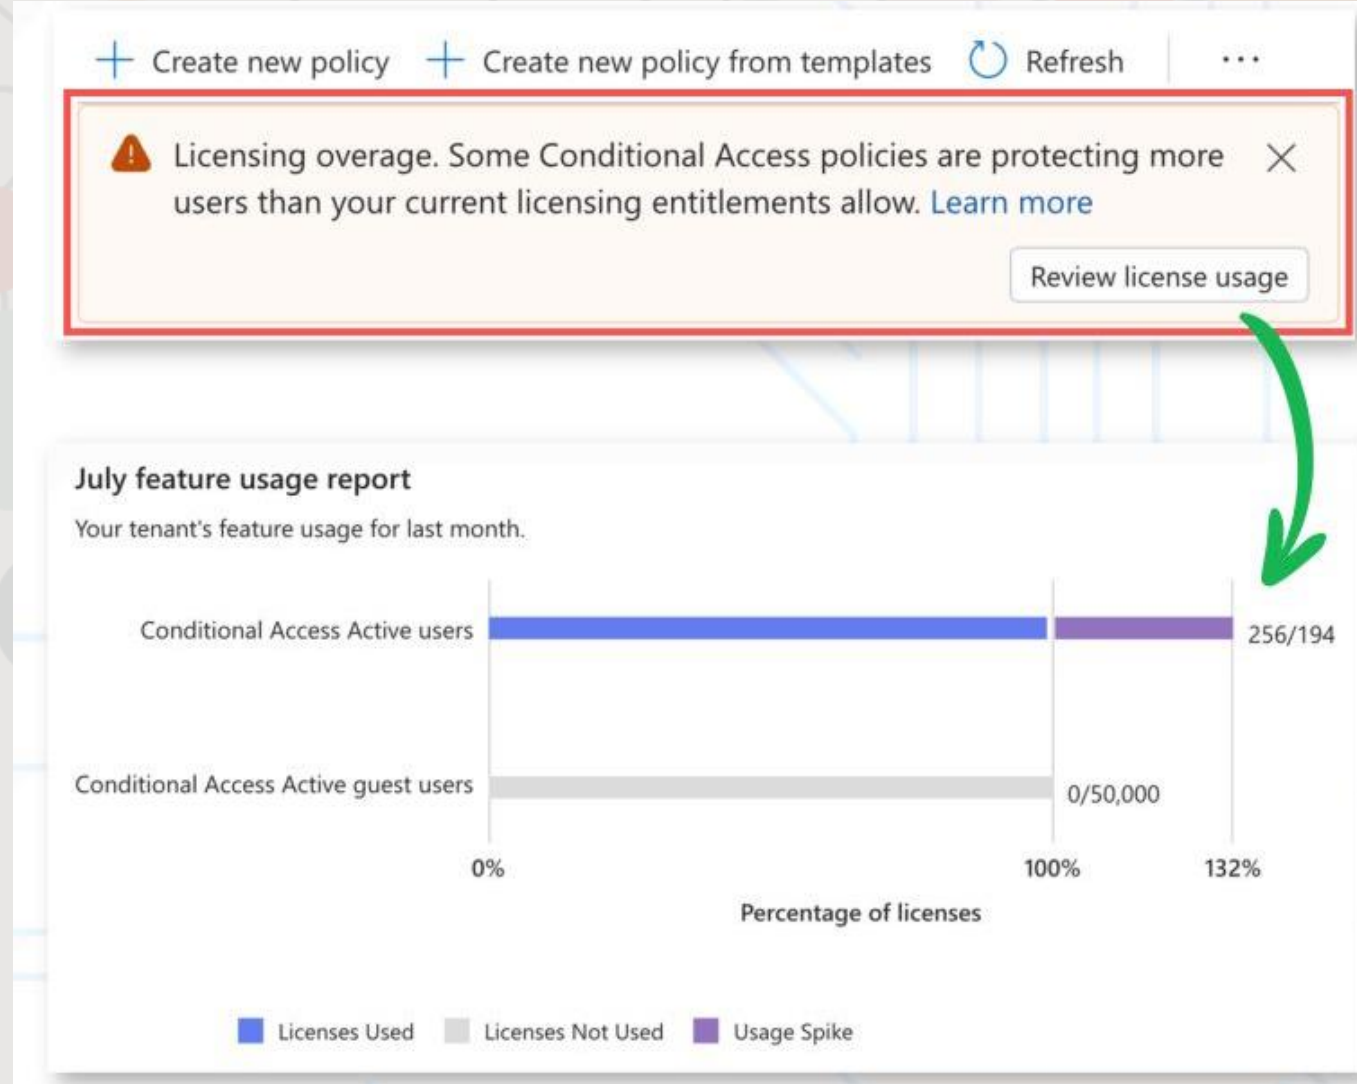

- Users will see updated visual cues in the app that help identify whether they are in the Microsoft Entra ID (work or school) experience or the Microsoft account (personal) experience. These include a different background color for each account type and "Work" label under the user profile in the navigation pane (available in the web and desktop apps). Note: users will continue to see existing visual cues like the green data protection shield in their Microsoft Entra ID experience.
- The Microsoft 365 Copilot app will adopt a simpler name ("Microsoft Copilot app") and icon.
- If using the web app, the browser URL will transition from m365.cloud.microsoft to copilot.cloud.microsoft, and users will be automatically redirected.
- The Windows and Mac desktop apps will receive an updated architecture, which will support future enhancements in the app.
- If your organization allows users to log into the app with their Microsoft accounts (personal): Users can sign into the app with their Apple or Google credentials to access their Microsoft account (personal).

Controllo licenze e under-licensing

Microsoft is introducing new checks and verifications on the number of licenses in the Tenant and the number of users who use them, showing warnings when the second exceeds the first.

For now they are only warnings...

MC1435850 - Updates to Cost Management in M365 Admin Center

- Microsoft is updating Cost Management in the Microsoft 365 admin center to improve reliability and clarity for Copilot credit spend management.
- Spending alert thresholds will be cleared; admins must recreate alerts in each spending policy where alerts are used.
- Policy assignment logic is changing for users covered by multiple spending policies, using a defined precedence order to select one policy.
- Overage handling for per-user and group limits is changing so usage can finish in progress, with future per-user overages handled differently from shared policy capacity.
- Capacity pack credit availability shown in Cost Management will better reflect actually available credits across Microsoft 365 admin center and Power Platform admin center.

Action Required/Recommendations:

REQUIRED - Re-create your spending alerts. Because prior alert values will be cleared and can't be restored, go into each spending policy where you rely on alerts and set the alert threshold again. Confirm the value is saved after you enter it. Only spending alerts are affected — your spending limits and per-user limits remain in place.

Review users assigned to multiple spending policies for the same service. Check where users overlap across policies and confirm the resulting policy assignment matches your intent.

Re-check group and per-user limit configurations. No action is required for the overage handling change to take effect, but it's a good time to confirm that per-user limits and group spending limits on each policy reflect the guardrails you want going forward.

Reconcile capacity pack usage across admin centers. Because Copilot Credits from capacity packs can be consumed in both Microsoft 365 Admin Center and Power Platform Admin Center, check Power Platform Admin Center to see how much prepaid capacity is already allocated to environments or agents.

MC1426371 - Passkeys by default and retirement of Microsoft-provided SMS and voice authentication

Microsoft Entra will make passkeys the default authentication experience and automatically enable them for eligible users currently using SMS or voice.

Microsoft is retiring its own SMS and voice multifactor authentication methods; organizations that still need telephony-based authentication must move to a customer-configured telecom provider.

A passkey registration campaign will be enabled in managed mode for eligible tenants, and users may be prompted to register a passkey during MFA sign-in.

Tenants relying only on Microsoft-provided SMS or voice may experience sign-in disruption once those methods are retired.

Admins should review their authentication strategy, prepare users for passkey adoption, and configure a telecom provider in Microsoft Security Store if SMS or voice must remain available.

Microsoft Entra Tenant Governance

Tenant Governance is now available in Microsoft Entra.

Administrators can discover and take control of shadow IT tenants across the organization, and establish least-privilege governance relationships with existing and newly created tenants.

It also monitors for configuration drift against customer-defined baselines across Microsoft Entra, Intune, Exchange Online, Teams, Purview, and Defender.

Part of the September 2026 Entra release, aimed at strengthening tenant governance and securing access in the age of AI.

Notifications

How notifications work

This is where your governance notifications will show up. After you finish tenant governance setup, you'll see things like requests, invitations, and drift alerts here.

Get started

Is tenant governance right for me?

Discover

Understand and control risk of shadow IT tenants

View related tenants so you can discover tenants your organization interacts with and investigate unsanctioned or unknown tenants that may require governance.

Set up related tenants

Govern

Establish governance relationships to centrally manage multiple tenants

Governance relationships are administrative relationships that enable cross-tenant user and application access. Leverage request and approval processes to ensure that relationships are created securely.

Set up a governance relationship

Monitor

Monitor your tenant's configuration

Create a monitor to ensure your tenant configuration doesn't drift from its defined security and compliance baseline, for over 200 resource types across Entra, Defender, Exchange, Intune, Purview, and Teams.

Set up monitoring

Get started

Microsoft Entra Security Administrator Role Expansion

The built-in Security Administrator role in Microsoft Entra is being expanded.

Non-privileged users assigned this role can now perform key identity response actions, including disabling and enabling user accounts, revoking active sessions, and forcing password resets.

This helps organizations streamline role assignments while maintaining least-privilege access and existing governance and auditing controls.

Rollout will be completed by the end of September 2026, as part of this month's Entra updates.

<https://techcommunity.microsoft.com/blog/microsoft-entra-blog/whats-new-in-microsoft-entra-september-2026/4545179>

Microsoft Intune Remote Help: Unattended Access

Intune Remote Help now supports unattended access with remote sign-in.

Help desk agents can sign into an idle Windows device using their own credentials, with no user needing to be present or approve the session.

This makes it easier to provide support during after-hours operations, and for kiosks, shared devices, and branch office environments.

Access is scoped through a dedicated role-based access control (RBAC) permission, so unattended support can be reserved for authorized admins.

<https://www.microsoft.com/en-us/microsoft-365/roadmap?id=499154>

MC1429018 - AI meeting archive file generation

Microsoft Teams is adding AI-generated meeting archive files (.meeting files) to support more context-aware responses from Copilot and Facilitator.

The feature is enabled by default and applies to meetings where AI is on, transcription is enabled, at least one Copilot-licensed participant is invited, and the meeting option allows Copilot and Facilitator during and after the meeting.

Archive files are stored in a tenant-owned SharePoint Embedded container, are not user-accessible, cannot be edited or moved, and contain AI-generated content rather than raw transcript snippets.

Administrators can enable or disable the feature and configure the archive expiration setting in the Teams admin center; the default retention is five years.

IT should review the policy and retention configuration, validate compliance alignment, and brief helpdesk/compliance stakeholders before rollout.

Skill for Copilot in PowerPoint

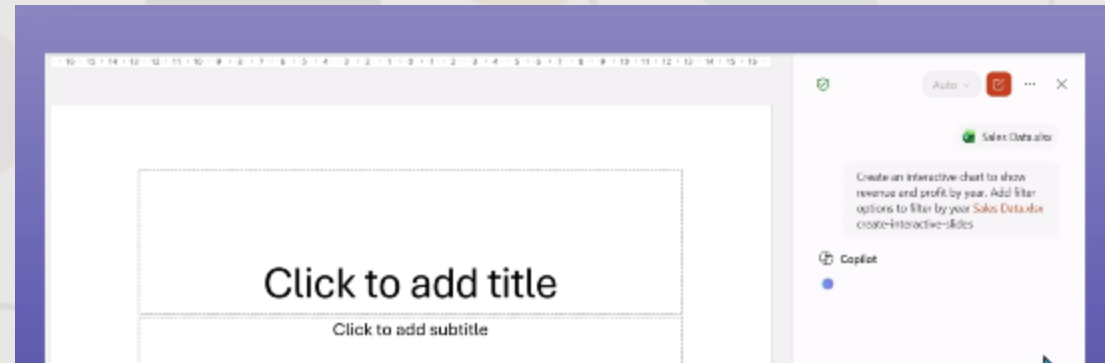

Add Content (+) in the prompt box and select @choose Skills. Select Create Interactive Slides.

Add a reference to a file in the cloud with your data eg. Sales-Data.xlsx or upload it from your device.

Add a little guidance to the prompt describing what you want and send.

After a short while, its done.

A single interactive slide that can be easily filtered to show different criteria without changing slides.

News from SharePoint and OneDrive

HTML pages coming to SharePoint

HTML pages are coming to SharePoint. You will be able to create HTML with Copilot in SharePoint or upload your own HTML files. Once stored in the pages library, you can render HTML as a page in SharePoint. You can make edits and share it with your audience. It's an additional way to present your content alongside existing ASPX pages.

It's a great move because it gives a lot of flexibility and open more ways to present your own content. Plus, AI tools create beautiful HTML files as an output with your data and you can use them directly in SharePoint.

Bringing own files is also extremely interesting feature but what about styles, scripts, security?

Can't wait to play with it 🤩🤩🤩

Details:

- ◆ Create HTML files with Copilot or upload own files.
- ◆ HTML files must be stored in a pages library.
- ◆ HTML files will be render as a page directly in SharePoint.
- ◆ You can share it with others.

General Availability: October 2026

Open-source Skills for Copilot in SharePoint

From individual prompts to a shared wealth of reusable AI workflows

KEY NEWS

Skills can be saved, shared, reused, and enhanced by the community as an open source asset.

01

Shared repository

A public PnP library collects ready-to-install skills and community contributions.

02

Portability of know-how

Repeatable workflows become SKILL.md files, transferable between sites and teams.

03

Reuse within SharePoint

Skills live in the Agent Assets library and can be retrieved from Copilot on the site.

04

Native governance

Permissions, retention, sensitivity labels, and audits can be applied in the same way as other SharePoint files.

IMPACT

Replicable expertise • More consistent results • Accelerated adoption

New SharePoint

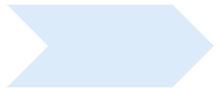

SharePoint Hero Link

FROM MANY LINKS TO A "HERO LINK"

Before

-  Specific link
-  Organization link
-  Anonymous link

Now

-  **1 primary and persistent link**
the rules change, the URL remains

THE NEW FEATURES THAT CHANGE THE EXPERIENCE

01

Secure by default

The link starts from "only people already added": it does not grant access on its own.

02

Upgradable access

Audience and access level are changed on the same link, without resending it.

03

A consistent experience

Same link from Share window, email and browser URL.

04

Clearer control

Direct permissions, additional links and external users remain visible and manageable.

IMPACT

Fewer duplicate links and fewer "access denied"; Less "oversharing", more readable governance and smoother collaboration.

Global rollout indicated: end of August → end of October 2026

New policies for file-level exclusions on OneDrive for Windows and macOS

With this rollout, users will be able to add or remove their own file-level exclusions by default.

Admins can still control this with:

- **DisableChangesToODIgnoreList** — stops users from managing exclusions.
- **DisableDefaultODIgnoreList** — turns off OneDrive's default exclusion list.

New SharePoint Catalog Sites

Microsoft has introduced a new Catalog Site option in the SharePoint Admin Center, making it easier for organizations to create a centralized repository for trusted and authoritative content.

This feature is designed to help organizations organize, manage, and share official resources while enhancing the overall Microsoft 365 and Copilot experience.

◆ What is a Catalog Site?

A Catalog Site is a dedicated SharePoint site that allows organizations to:

- ✓ Centralize official documents, templates, and knowledge resources
- ✓ Publish trusted and authoritative content across the organization
- ✓ Improve content discoverability with built-in analytics
- ✓ Provide high-quality knowledge sources for Microsoft Copilot responses
- ✓ Maintain governance and consistency across enterprise content

Create a site: Select the site type

Select the type of site you want to create. [Learn more about team sites](#), [learn more about communication sites](#) or [learn more about catalog sites](#).

Team site

Create a private space to collaborate with your team.

- 📅 Track and stay updated on project status
- 🔄 Share team resources and co-author content
- 👥 All site owners and members publish site content
- 🔗 Can connect to other Microsoft 365 products

Communication site

Share information that engages a broad audience.

- 📄 Create a portal or subject-focused site
- 👥 Engage dozens or thousands of viewers
- 👤 Few content authors and many site visitors

Catalog site

Create a trusted catalog of resources and templates.

- 📁 Collect, organize, and share authoritative content
- 📈 See which content is viewed most often with analytics
- 🔗 Power Copilot answers with official content

Teams Phone

PMP: Set as a Resource Accounts for Shared Devices in Teams Rooms Pro Management

Shared device accounts are fundamentally different from personal user accounts as they exist to support room experiences and shared collaboration scenarios not personal productivity workflows.

By marking shared device accounts as Resource Accounts, organizations can use this to strengthen their security posture.

Key benefits include:

- Microsoft 365 services are able to differentiate resource accounts from standard user accounts, enabling more secure, consistent, and resource aware behaviors across the ecosystem
- Removes resource accounts from meeting chats after the call ends
- Removes access to shared files and recordings
- Align shared device identities with Microsoft 365 governance and compliance models
- Prepare for future platform capabilities that enforce resource-specific access policies

Generate OTP Set as Resource Refresh Preferences Review OTP requests

MC1435786 - Migrate shared Teams devices to passwordless Entra resource accounts

Microsoft Teams is introducing a new migration experience in the Teams Rooms Pro Management portal for moving existing room/shared device accounts to passwordless Microsoft Entra resource accounts.

The change applies to admins managing Teams shared devices and shared space devices that are joined to Microsoft Entra ID and managed in the Teams Rooms Pro Management portal.

After migration, devices authenticate with secure device-bound credentials instead of stored usernames and passwords, improving security and sign-in resilience.

Migration is not automatic; admins must identify eligible accounts, schedule migrations, and execute them in bulk. Existing Teams resource account creation and deployment processes remain unchanged, but Microsoft recommends piloting and validating the experience before broader rollout.

Resource Accounts

Review the status of your resource accounts information.
Select an account and view Mailbox settings, location and license information.
Mark room and shared device accounts as Resource Accounts to prevent unintended access to personal mailboxes and files, align with IT governance, and strengthen security.

Coordinated meeting support is coming to Teams Rooms on Android and Android touch boards

New on the Microsoft 365 Roadmap: coordinated meeting support is coming to Teams Rooms on Android and Android touch boards.

Paired devices will work together in the same hybrid meeting:

- Coordinated join and leave across paired devices
- Collaboration across front-of-room displays and touch boards
- A coordinated experience for both in-room and remote participants

GA is slated for January 2027 — the first Teams Rooms item on the roadmap with a 2027 date.

MICROSOFT 365 ROADMAP · COMING JANUARY

Teams Rooms on Android and Android Touch Boards Coordinated Meeting Support

Pair Android Teams Rooms and touch boards so they join, leave, and collaborate as one hybrid meeting space.

- Coordinated join and leave across devices
- Front-of-room displays and touch boards together
- Immersive for in-room and remote participants

GA · JANUARY 2027

Roadmap ID 569420

Teams is getting a new app for organizational communication!

Microsoft is introducing Communicator, a new Teams app that helps organizations send important announcements to the right people and track how they are received.

With Communicator, designated communicators can:

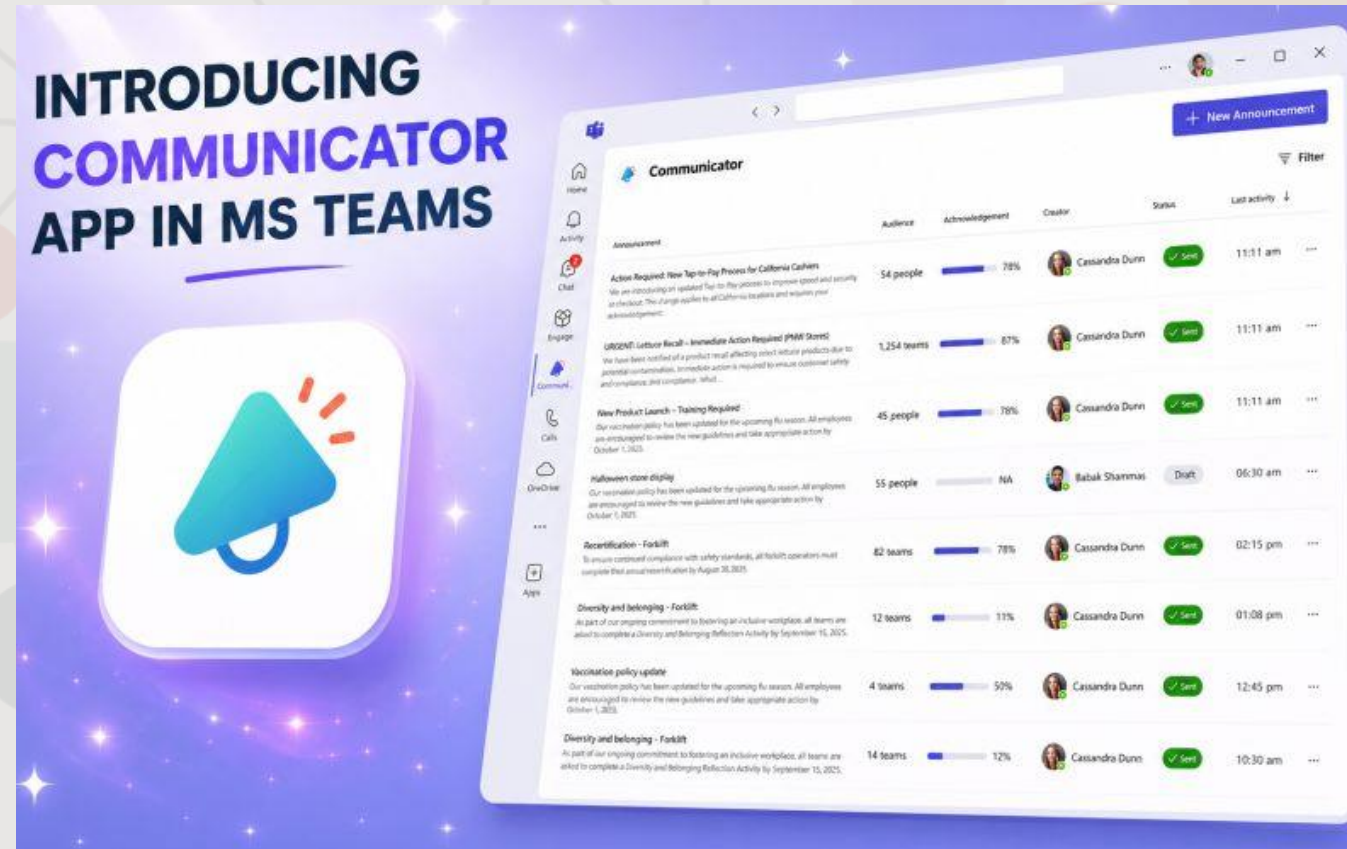

- **Send targeted announcements** to users and Teams channels
- Share **important updates** directly in Microsoft Teams
- Ask recipients to **acknowledge an announcement** or complete a required action
- **Track message delivery** and acknowledgments

It can be used for company announcements, training updates, compliance notifications, safety alerts, and frontline or store operations.

The app is now entering Public Preview, with the rollout beginning in mid-August 2026.

To prepare for Communicator, administrators should:

- Install and make the Communicator app available to users who will create and send announcements.
- Ensure the Communicator Bot is installed and available for users and Teams channels that will receive communications.
- Review Teams app permission policies, app setup policies, and app availability settings to ensure the right users have access.

New Teams Admin policy to automatically block external meeting bots

Teams is introducing a new meeting protection policy that allows administrators to automatically block identified external meeting bots from joining meetings. Today, Teams can identify meeting bots and provide visibility to organizers and administrators. This policy automatically block detected external meeting bots from joining meetings. This gives additional control over how identified bots are handled and can help reduce organizational risk.

Details:

- ◆ A new policy option will be added to the existing Manage bots meeting protection settings in the Teams admin center.
 - ◆ Administrators will be able to configure Teams meeting policies to automatically block identified external meeting bots.
 - ◆ Identified external meeting bots will be prevented from joining meetings governed by the assigned policy.
 - ◆ Existing bot detection and visibility experiences for organizers and administrators will continue to be available.
 - ◆ The policy can be assigned to specific users or groups through existing Teams meeting policy management.
 - ◆ Organizations that do not enable this setting will continue to use the current bot detection experience.
- ⚠ Disabled by default.

Source: Marcin Siewnicki

Personal Attendant just became much more personal

Custom greeting 🗨️

Choose exactly how your Personal Attendant welcomes callers and sets expectations.

Example: "Hi, you've reached Daniel Richter's Personal Attendant. Tell me what you're calling about. I can help with an urgent request or arrange a follow-up."

Useful for consultants or sales leaders who want every caller to receive a professional, personal introduction.

Custom workflows ⚙️

Give the attendant instructions that guide how different calls should be handled.

Example: "If the caller reports a customer-impacting outage, treat it as urgent and try to transfer the call to me. Otherwise, capture the reason and offer a follow-up."

Useful when critical calls need to break through while routine requests are handled without interrupting focused work.

Together, the two options turn generic call screening into call handling that follows your own rules.

Currently available through the Microsoft 365 Copilot Frontier program.

Calls > Manage Personal Attendant > Customize Personal Attendant

🔗

Manage auto attendant shared voicemails in the Teams Queues app

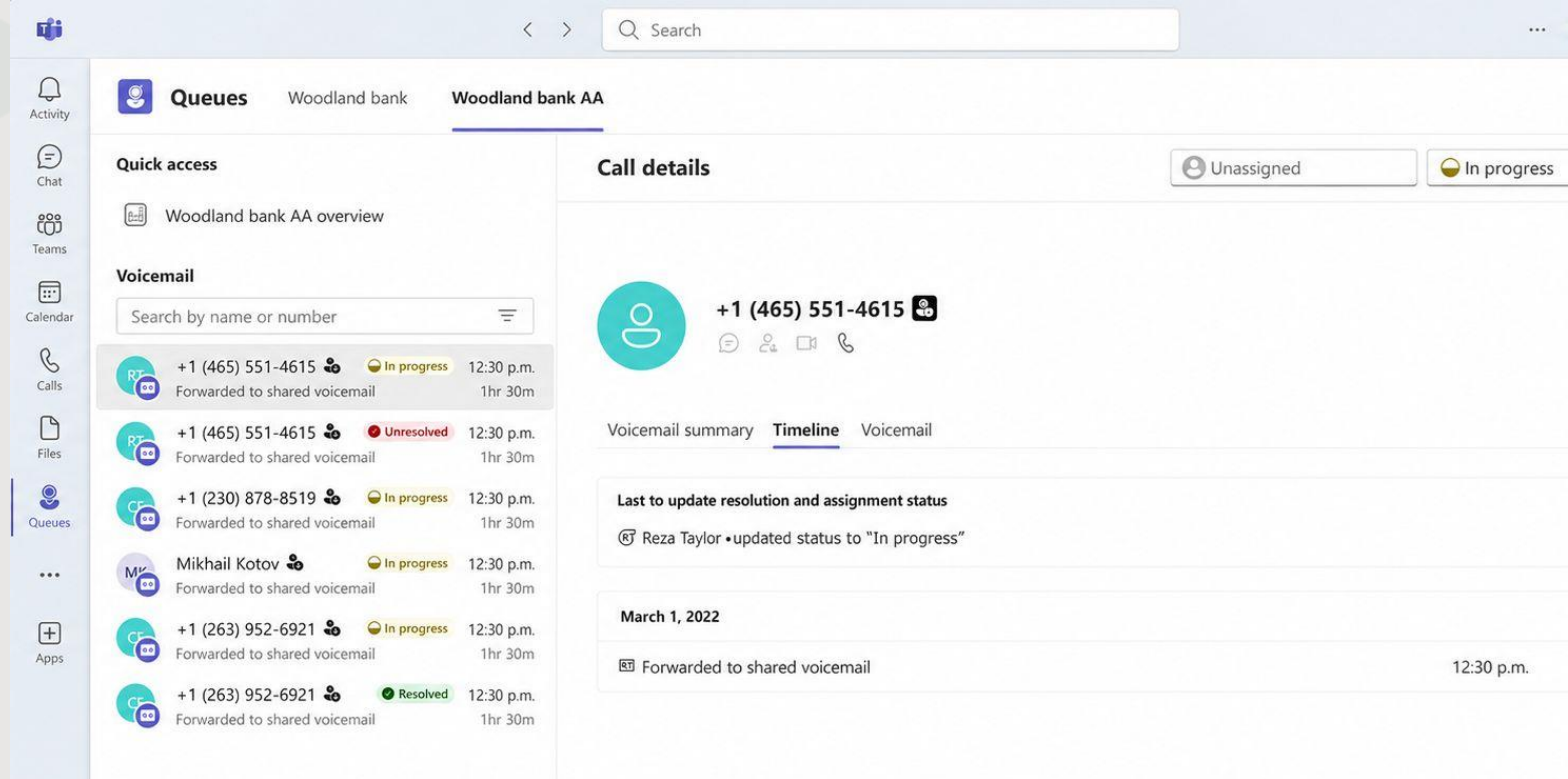

You will be able to view and manage auto attendant voicemails directly in the Teams Queues app. Previously, organizations typically managed auto attendant voicemails through shared mailboxes or other workflows. This update provides a centralized experience for teams to review, triage, and respond to customer voicemail messages.

Details:

- ◆ You will see a new Auto Attendants tab in the Queues app.
- ◆ You can view voicemail history for auto attendants you are authorized to access.
- ◆ You can play voicemail messages and review transcripts when transcription is enabled.
- ◆ You can track voicemail handling using the following statuses:
 - ◆ Unresolved
 - ◆ In Progress
 - ◆ Resolved
- ◆ You can filter voicemail messages by status.
- ◆ You can mark voicemail messages as urgent to help prioritize follow-up activities.

 General Availability: August 2026

Source Marcin Siewnicki

The screenshot displays the Microsoft Teams Queues app interface. The left sidebar contains navigation icons for Activity, Chat, Teams, Calendar, Calls, Files, Queues, and Apps. The main content area is titled 'Queues' and shows a list of voicemails under the 'Woodland bank AA' queue. The voicemail list includes columns for status (In progress, Unresolved, Resolved), time (12:30 p.m.), and duration (1hr 30m). The right pane shows 'Call details' for a specific voicemail from +1 (465) 551-4615, including a 'Voicemail summary' and a 'Timeline' section.

Microsoft Teams: Mandatory Pre-Meeting Consent

Teams is introducing mandatory pre-meeting consent for participants.

Admins can configure a custom consent message in the Teams admin center. All participants (organizers, internal users, external users, and anonymous attendees) must accept it before joining meetings where the policy is enabled.

This supports compliance needs such as recording notices or responsible AI usage guidelines. Consent acknowledgments are recorded in audit logs for governance and investigations.

Disabled by default. General availability is planned for September 2026 across Worldwide, GCC, GCC High, and DoD environments.

La dismissione di Exchange Web Services ONLINE entra nel vivo

- **Ottobre 2026:** Microsoft inizia la **disabilitazione progressiva di EWS** in Exchange Online.
- **Mitigazione temporanea:** dal 2026 sarà possibile limitare EWS tramite **AppID Allow List**, ma è una misura transitoria, non una soluzione definitiva.
- **1 aprile 2027: fine definitiva del supporto**, EWS non sarà più utilizzabile in Exchange Online.
- **Azione principale:** identificare tutte le applicazioni, script, servizi e prodotti terzi che utilizzano EWS e pianificare la migrazione a **Microsoft Graph API**.
- **Verifica utilizzo:** sfruttare i report EWS, i log Entra ID e gli strumenti Microsoft per individuare le dipendenze.
- **Rischio principale:** applicazioni non migrate potrebbero perdere l'accesso a mailbox, calendario, contatti e altri dati Exchange Online dopo la dismissione (Backup, diagnostica, legacy).
- **Attenzione ai vendor:** verificare che applicativi di backup, CRM, ticketing, firmeemail, archiviazione e tool di migrazione supportino Microsoft Graph.
- **Rischio ignorato:** se avete un ExchangeOnprem che deve vedere le Free/Busy di Exchange Online dovete configurare la nuova modalità ibrida ANCHE se non avete MS365.

MILESTONE	Microsoft takes a snapshot of <i>EWSEnabled</i> state.	Microsoft creates <i>Allow List</i> for tenants who have not done it, based on tenant usage.	If tenant <i>EWSEnabled</i> = Null , Microsoft sets it to False . EWS is blocked for all apps.	Exchange Online EWS is permanently blocked. Microsoft sets <i>EWSEnabled</i> = False for all tenants.	No more EWS in Exchange Online.
	Now to August 2026	September 2026	October 2026	April 2027	May 2027+
ACTIONS TO TAKE	- Review EWS Usage reports - Remove dependencies on EWS Optional: - Set <i>EWSEnabled</i> to True (by end of August) - Create your own EWS Allow List	- Review EWS Usage reports - Remove dependencies on EWS	- If no ill effects, leave EWS disabled. - If some apps are blocked, set <i>EWSEnabled</i> to True and leverage the Allow List. Continue removing EWS dependencies.	- Exchange Online EWS use is blocked - No further extensions are possible

Writeback for Cloud-Managed Remote Mailboxes: Now Generally Available

The_Exchange_Team Platinum Contributor

Aug 03, 2026

In May, we announced the [Public Preview of Writeback for Cloud-Managed Remote Mailboxes](#). Since then, many customers have enabled this feature and shared their feedback. Today, we're excited to announce that **Writeback for Cloud-Managed Remote Mailboxes is now Generally Available (GA)**.

Writeback is available in WW, GCCH, DoD, and 21Vianet environments and supports up to **600,000 cloud-managed mailboxes per tenant**.

Get started

- Review [Cloud-based management of Exchange attributes for Remote Mailboxes in hybrid environments](#).
- Follow [How to enable Exchange attribute writeback](#).
- Review the [complete writeback attribute list](#).
- Read the [last Exchange Server decommissioning guide](#).

The supported writeback set now includes **24 attributes**, including:

- extensionAttribute1 through extensionAttribute15
- msExchExtensionCustomAttribute1 through msExchExtensionCustomAttribute5
- msExchRecipientDisplayType
- msExchRecipientTypeDetails
- proxyAddresses
- mail
