Nuove icone in Microsoft 365

Fine vita di Office Online Server il 31/12/2026

Announcing the retirement for Office Online Server

TimDavenport  MICROSOFT

Oct 21, 2025

What's changing?

Microsoft is announcing the end of support and retirement for Office Online Server effective **December 31, 2026**. After this date, Office Online Server will no longer receive security updates, bug fixes, or technical support from Microsoft. This change is part of our ongoing commitment to modernizing productivity experiences and focusing on cloud-first solutions. To help stay secure and compliant, begin planning now to move to supported options, such as Microsoft 365.

What does end of support mean?

- No more security updates. Systems running Office Online Server may be vulnerable to the evolving threat landscape.
- No bug fixes or technical support.
- Potential compliance risks. Unsupported software may put regulated organizations at risk of non-compliance.

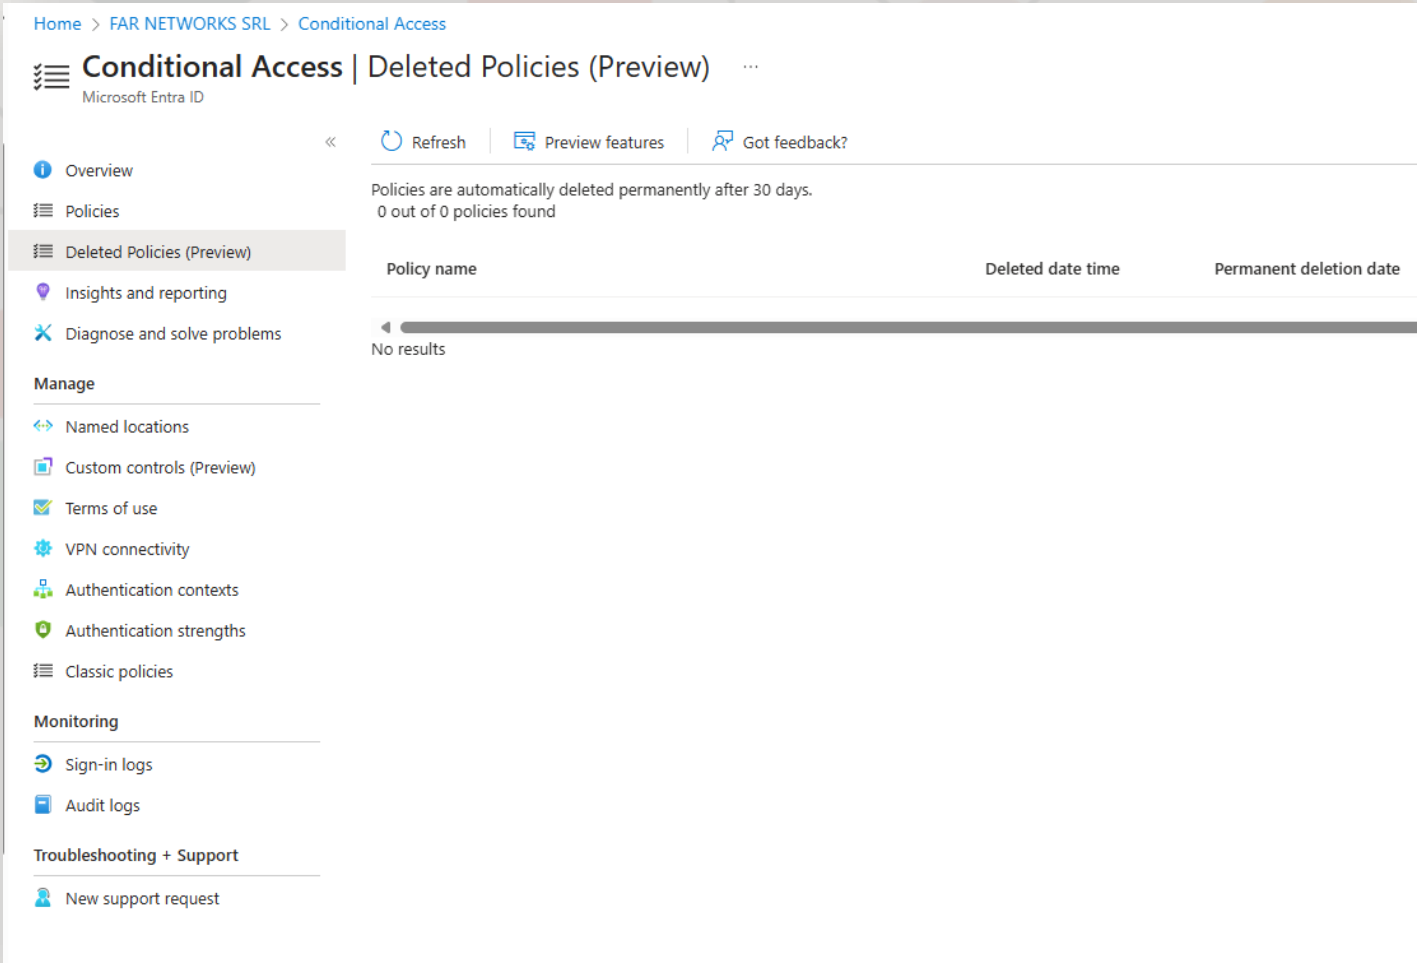

This announcement does not apply to products that integrate with Office Online Server, such as Exchange Server Subscription Edition, SharePoint Server Subscription Edition, or Skype for Business Server Subscription Edition, which will continue to be supported. Learn more about the [support timeline](#) for Subscription Edition versions of Exchange Server, SharePoint Server, and Skype for Business Server.

MC1164381 - OneDrive: Simplified file transfer for departing employees

Redesigned cleanup emails so they're harder to miss.

Better filters to quickly find shared/important files.

Bulk “Move and keep sharing” to transfer multiple files and preserve existing permissions.

Consolidated alerts, if ≥ 6 files are moved, collaborators get one notification instead of many.

Access on departure: When an account is deleted, the manager or secondary owner gets automatic access to the user's OneDrive and an email with details and retention period.

Retention reminder: 7 days before the retention ends, a second email warns the OneDrive will be permanently deleted in 7 days.

Benefit: Smoother handovers, less risk of losing critical content, and clearer visibility during offboarding.

MC1176369 - Microsoft Purview | eDiscovery: Import Non-O365 data into review set for modern eDiscovery

With the new Microsoft Purview eDiscovery (Premium) capability announced, you can import and review non-Microsoft 365 (external) data alongside your Microsoft 365 content.

Supported types of data: you can ingest structured or unstructured content exported from other systems, such as:

- Corporate communications: Slack, Zoom Chat, Webex Teams, WhatsApp Business, Bloomberg Chat, Symphony, etc.
- File-based content: PDFs, text files, email archives (e.g., .pst), CSV logs, or ZIP archives.
- Third-party platforms: Salesforce, ServiceNow, Box, Dropbox, Google Workspace exports, or other collaboration tools.
- Custom business data: Any line-of-business exports formatted into the supported ingestion schema (via Microsoft Graph eDiscovery API or Purview Data Connectors).

The feature is available by default, and no configuration is needed.
Available: December 2025

MC929014 - Microsoft Loop – Departed User Content Workflows for User-Owned Loop workspaces

Starting January 2026, administrators will be able to manage retention and deletion workflows for user-owned Microsoft Loop workspaces including Copilot Pages and personal Loop workspaces when users leave the organization.

Rollout: January 2026 (previously planned for November 2025).

Admins can control retention and deletion of departing users' Loop content.

Option to grant temporary access to other employees or admins to retrieve or save important data before deletion.

Impact: Simplifies data management and prevents loss of Loop content during offboarding.

Preparation required: Non, rollout happens automatically.

Admin-Consent per App di accesso a Teams e Posta

Upcoming Secure by Default Settings Changes for Exchange and Teams APIs

 Archive  Share  Copy link  Mark as unread

Summary

Starting late October to November 2025, Microsoft will require admin consent for third-party apps accessing Exchange and Teams content via Microsoft-managed default consent policy. This enhances security by restricting user consent, affecting new app permissions but not existing approved apps. Admins should review app access and configure consent workflows accordingly.

Is this summary helpful?  

As part of the [Microsoft Secure Future Initiative \(SFI\)](#) and in alignment with the "Secure by Default" principle, we are updating the Microsoft-managed default consent policy in Microsoft 365 Graph to align with Microsoft's ongoing security improvements, help you to meet industry best practices, and harden your tenant's security posture. These changes enable admins to better control third-party app access for Exchange and Teams content.

This is the next step in a broader effort to evaluate and evolve Microsoft 365 defaults through the lens of SFI. This update follows our recent SharePoint and OneDrive changes that blocked legacy protocols and required admin consent for third-party apps accessing files and sites. The Exchange and Teams updates are a continuation of this same approach. admin consent for third-party apps accessing files and sites. The Exchange and Teams updates are a continuation of this same approach.

MAJOR UPDATE

ADM

USER IMPACT

How this affects your organization:

The following settings will be updated:

Change	Impact
Require admin consent for apps accessing <u>Exchange and Teams</u> content	For customers using the Microsoft-managed default consent policy, admin approval will be required for third-party apps accessing Exchange and Teams content via Microsoft Graph, Exchange Web Services (EWS), Exchange ActiveSync (EAS), POP3, and IMAP4.

To preserve end-user experience, some Exchange email clients are exempted from this change. Administrators can review and modify as noted below.

These changes will be reflected as an update to the Microsoft-managed default consent policy. With this change, any organization using the Microsoft-managed user consent policy will require admin consent for Mail, Teams Chat and Meetings functionality across various protocols. [Learn more about Graph permissions.](#)

- Organizations using other user consent policies will not be affected.
- These changes will not require additional licensing.

MC1173926 - Audio-only recording now available in Microsoft Teams

Microsoft Teams is introducing an Audio-only recording option for meetings and calls, allowing users to record just the audio while keeping their cameras on.

This provides a more privacy-conscious and convenient recording experience without exposing facial information.

Availability: Rolling out worldwide from early October to late November 2025.

Applies to: Teams on Windows, Mac, Web, iOS, and Android.

Impact:

- Default recordings still include video and audio.
- Users can now select “Audio-only” from the recording menu.
- No admin setup or policy changes required.
- No impact on compliance or existing recording policies.

Start recording and transcription

Select the correct language to ensure the accuracy of features that process audio.

MC1174858 - Introducing Image Search in Microsoft Teams

Microsoft Teams is adding the ability to search for images shared in chats and channels, including screenshots, whiteboard photos, and other visuals. Users can find images by person name or message content in Autosuggest, and the Search Results Page shows the chat or channel where each image was shared for context.

Image results are powered by message content, people involved, and on the Search Results Page, chat or channel location for added context.

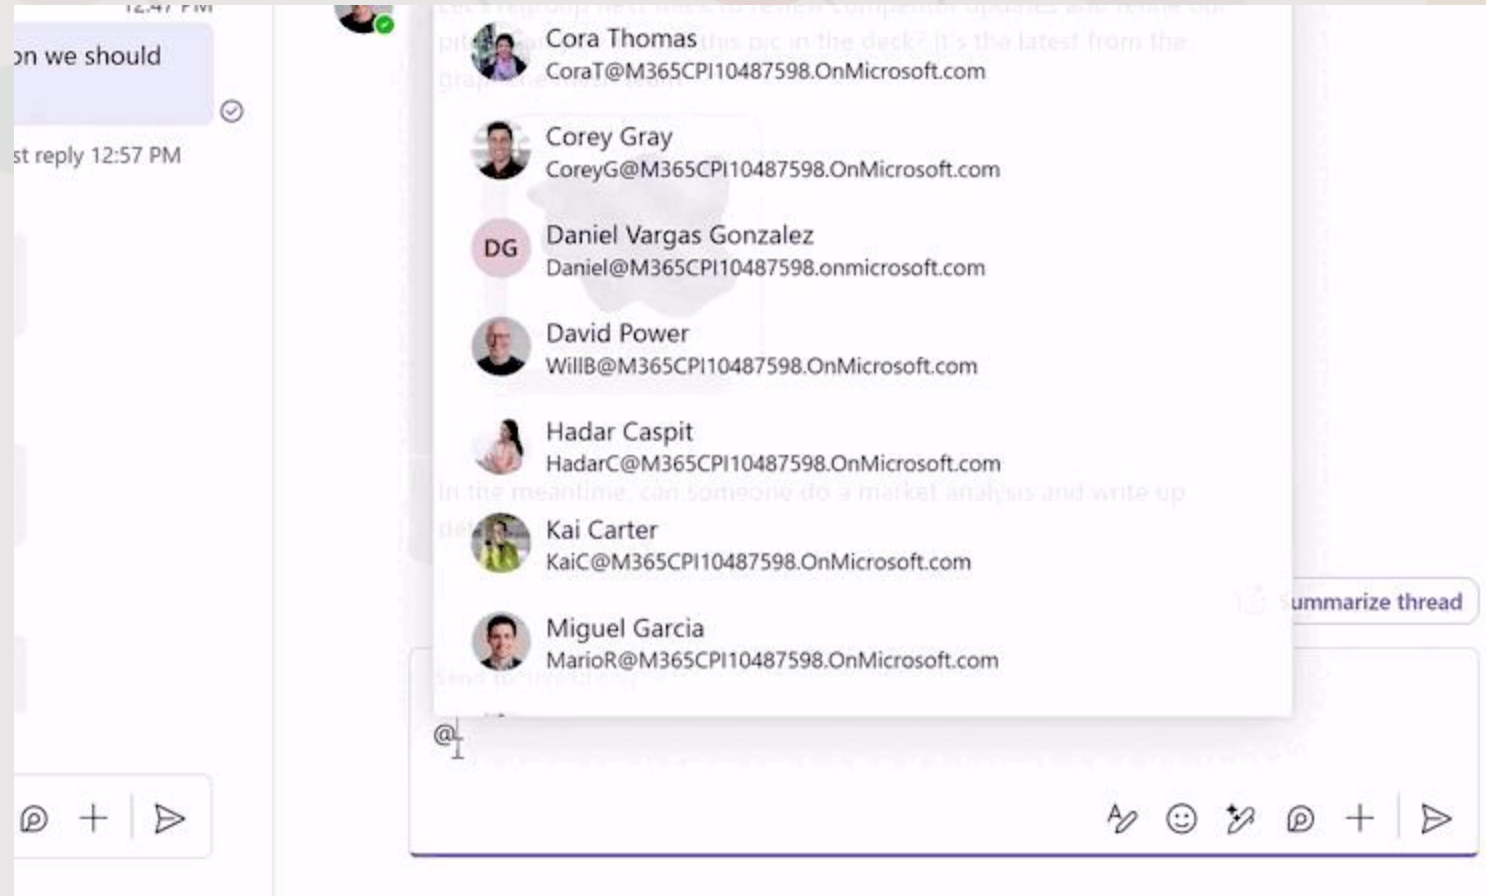

Agents in channels [Public Preview]

Now, each channel can have a Channel Agent that draws on its conversations and meetings to act as a domain expert for the team.

These agents adopt the channel's name and help with common tasks – for example, flagging important deadlines that are buried in conversations, summarizing progress with succinct status reports, assigning tasks and due dates, and answering questions asked in natural language like “What’s the latest on our budget?”

You can even invite these agents into meetings when you need expert insights in the discussion.

Channel Agent is now in Public Preview* for users with a Microsoft 365 Copilot license

Threads in channels

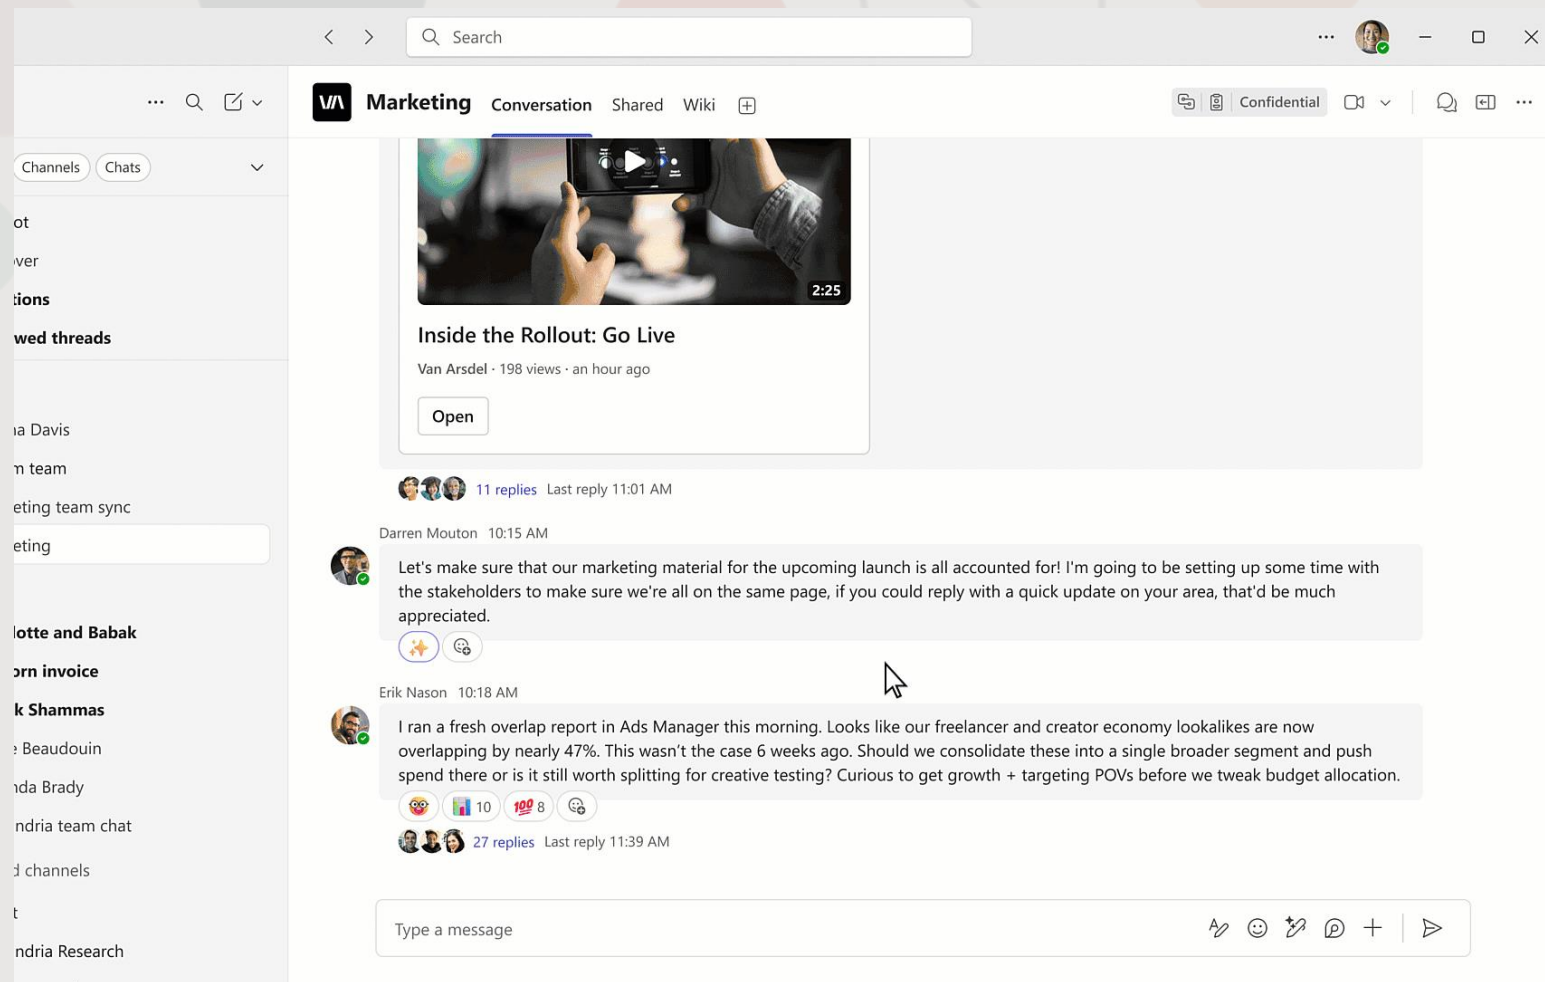

Threads in channels let you reply directly to specific messages, keeping related conversations grouped together and preserving context without disrupting the main flow.

This makes it easier to stay up to date, while allowing for in-depth discussions.

You can follow the threads that matter most to you, and when an important update or decision is made, you can send it back to the main conversation, so everyone stays aligned without requiring them to sift through every reply.

The Followed Threads view brings all your followed conversations into one interactive list.

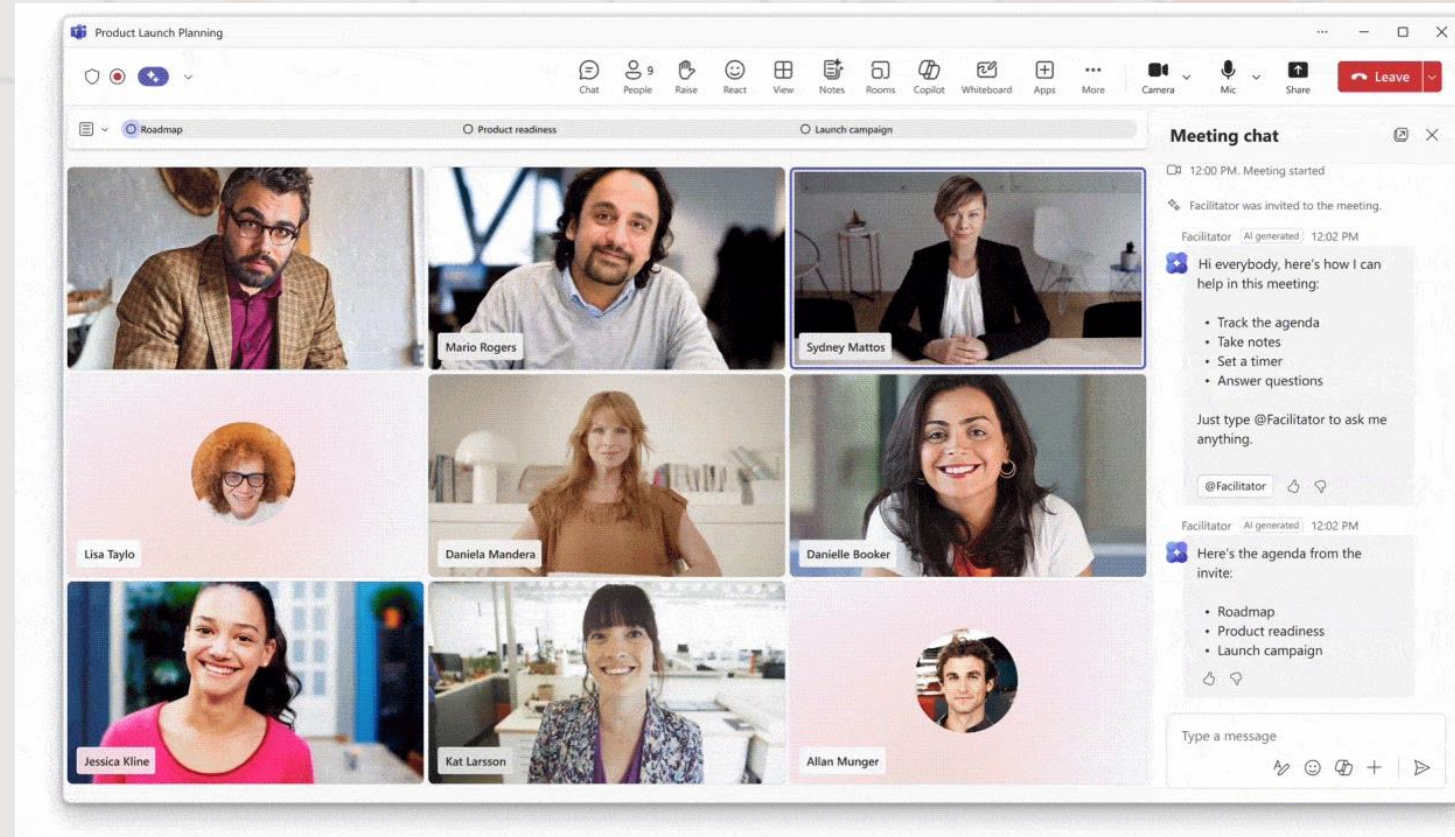

You can quickly access all your threads, triage and respond—without jumping between channels. And when you're done with a thread, unfollow it to stop receiving future updates

Facilitator Agent

Facilitator, è un agente di intelligenza artificiale che si unisce alle riunioni di Microsoft Teams per mantenere le conversazioni mirate, organizzate e orientate all'azione, aumentando la produttività, non il lavoro:

- deduce gli obiettivi dalla discussione
- mantiene le conversazioni in linea con una timeline visibile, allocazioni di tempo intelligenti e promemoria delicati
- risponde alle domande con il contesto della riunione e le informazioni web pertinenti
- registra, assegna e aggiorna le attività, sincronizzandosi con Planner per un follow-up senza interruzioni

Enhanced Meeting Protection – Prevent Screen Capture [Premium]

To address the issue of unauthorized screen captures during meetings, the Prevent Screen Capture feature ensures that if a user attempts to take a screen capture, the meeting window will turn black, thereby protecting sensitive information.

This feature will be available on Teams desktop applications (both Windows and Mac) and Teams mobile applications (both iOS and Android).

For users joining from unsupported platforms, they will be placed in audio-only mode to maintain the integrity of the meeting's content.

This feature is available with a Teams Premium license.

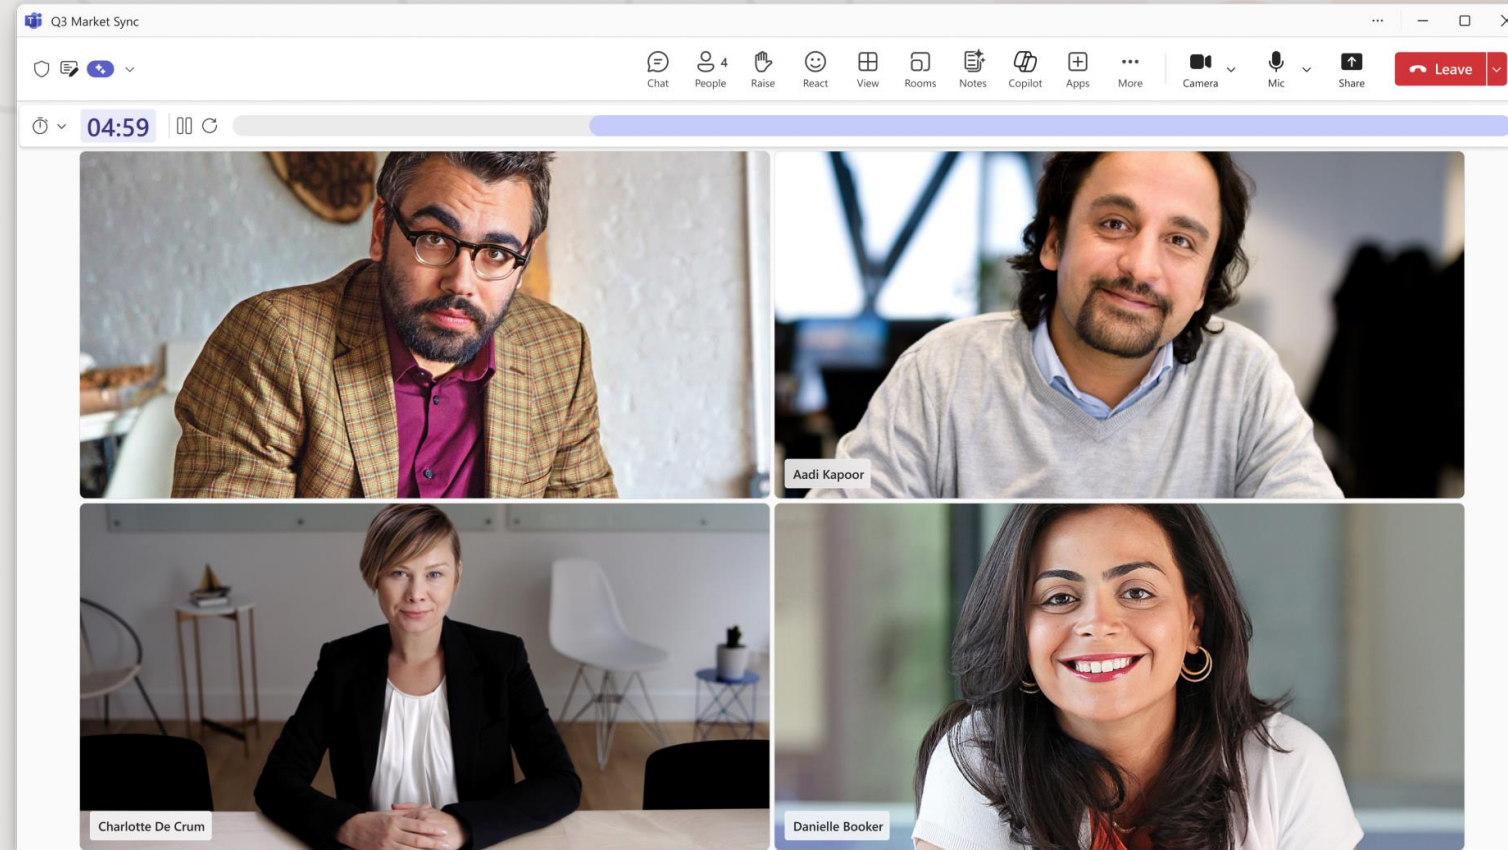

Countdown timer for Teams Meetings

Manage time and streamline meeting discussions with the new countdown timer for Teams meetings, a tool designed to keep meetings efficient and on schedule.

Any user can easily add a timer of any duration to the meeting (up to 100 minutes), which will appear in the meeting window for all participants with controls to start, stop, pause, and add more time.

Colors automatically change as the timer gets closer to zero to help keep the speaker on track.

Organizer controls now available in meeting toolbar

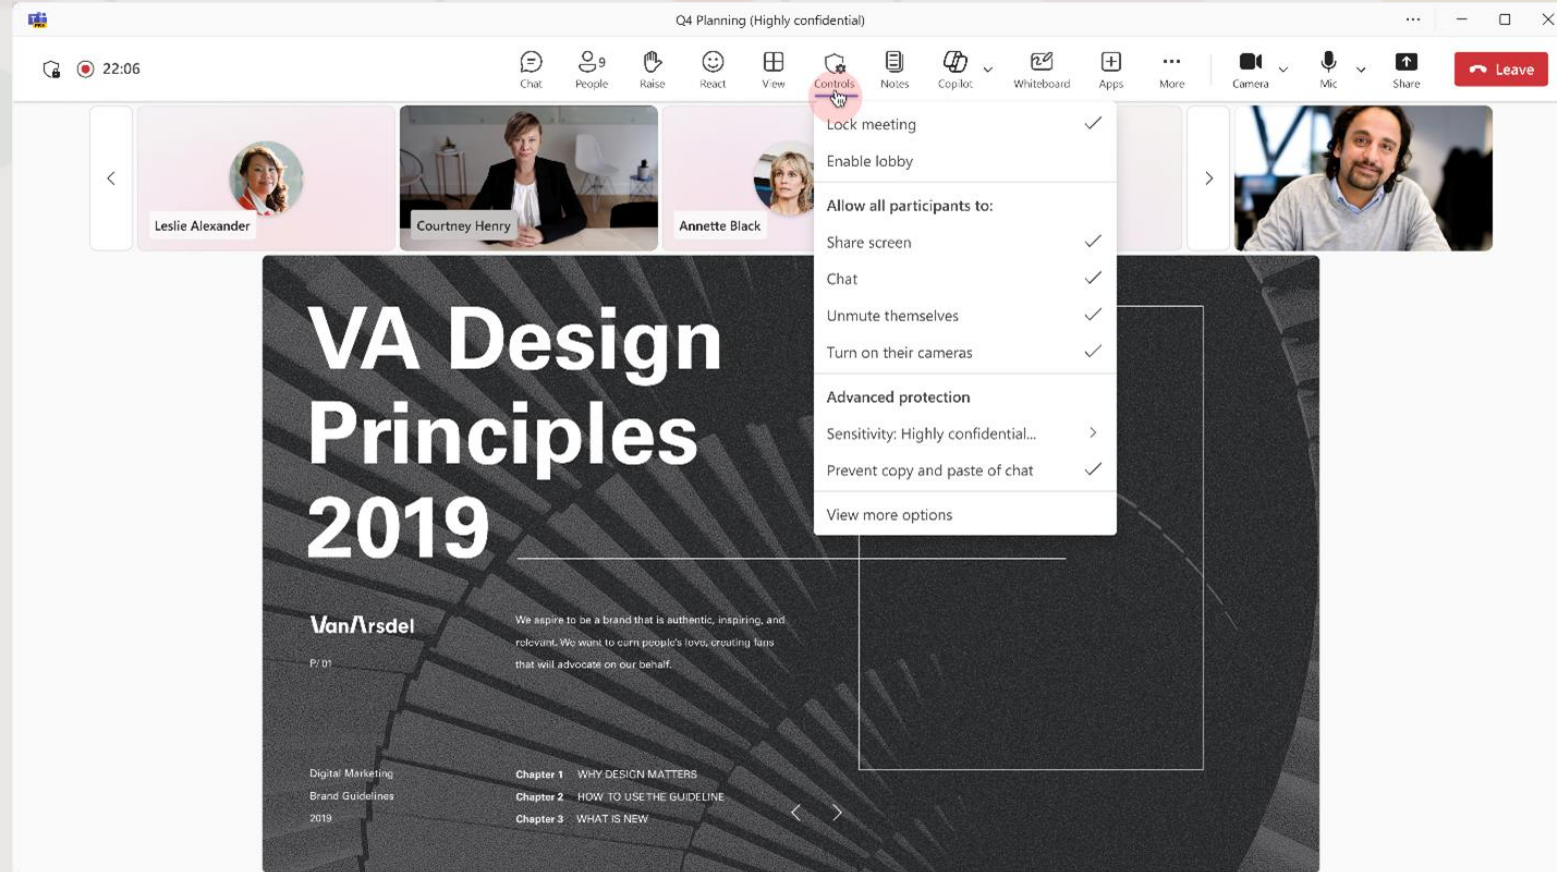

Take control of your meetings—right from the toolbar!

Managing your Teams meetings is now faster and easier.

Organizers and co-organizers will see a new 'Controls' button directly on the meeting toolbar—giving instant access to key settings for secure and seamless meetings.

If an organizer has Teams Premium license, they'll unlock even more functionality with the Advanced Protection section inside the Controls flyout.

Need deeper customization? Just click 'View more' at the bottom of the flyout to open the full Meeting Options panel.

Chat for organizers and presenters in webinars

Organizers, co-organizers, and presenters can now take advantage of a dedicated private chat in webinars, separate from attendee conversations.

This feature is available before, during, and after the event, allowing presenters and event staff to coordinate easily and ensure smooth webinar delivery.

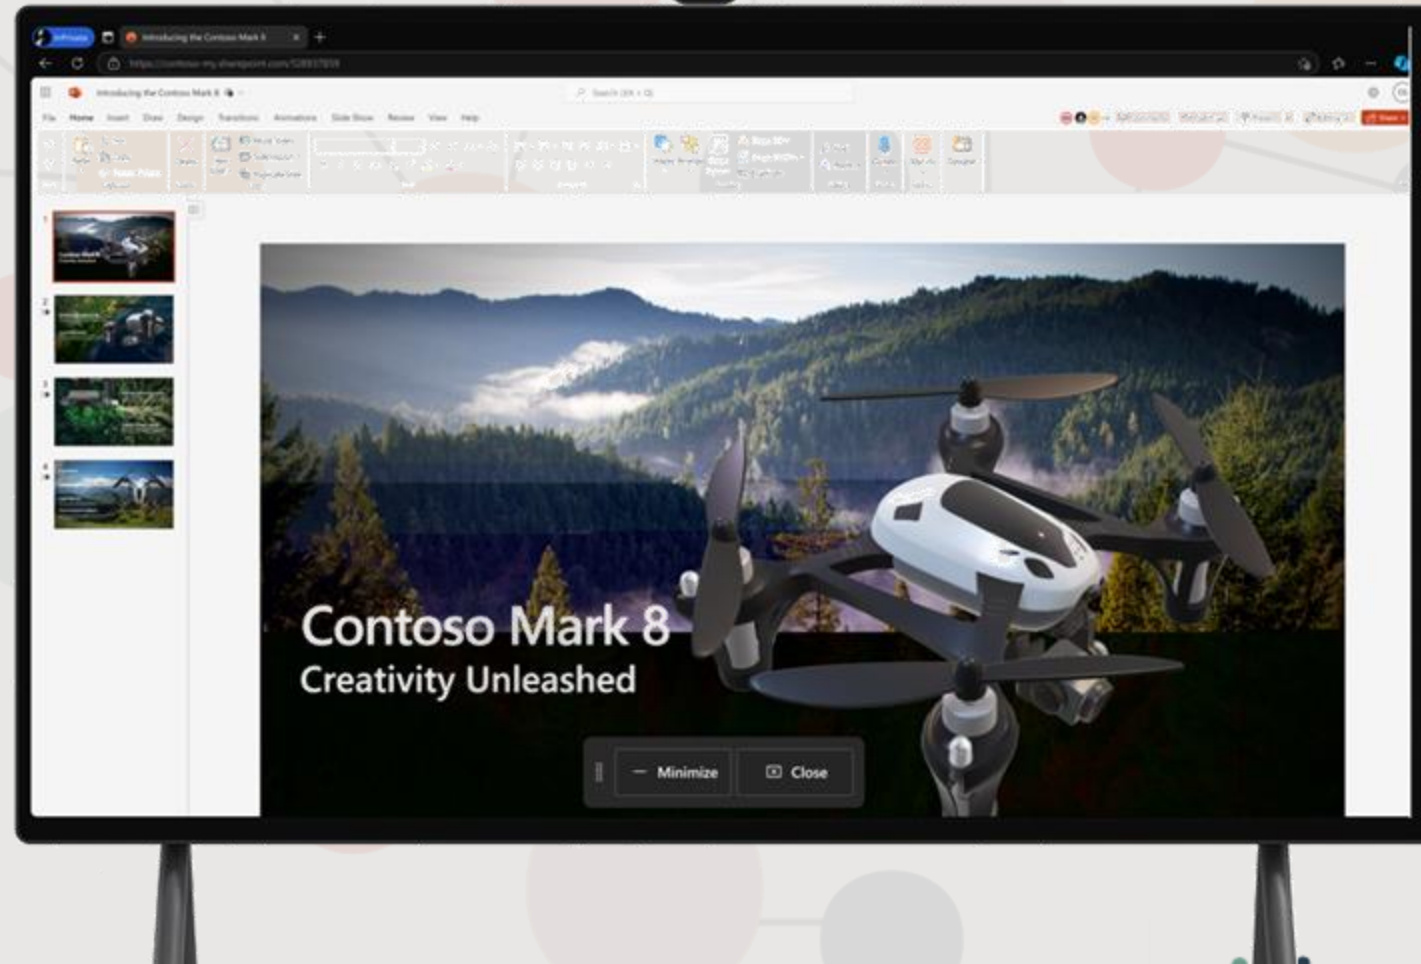

Browser support on Teams Rooms on Windows touch boards

Now you can access websites and line-of-business web applications using private browsing mode with Microsoft Edge on Teams Rooms on Windows touch boards, including Surface Hub 3.

You can use the browser during meetings or outside of them, and admins can manage browsing policies, via the Pro Management portal, to ensure a secure and safe browsing experience.

Available with Teams Rooms Pro.

Universal Touch Console support for MTRoW touch boards

Using touch boards in a room is easier than ever with Universal Touch Console support.

Once set up by an admin, you can control Teams Rooms on Windows touch boards, including Surface Hub 3, using the console on the table or by touching the board device

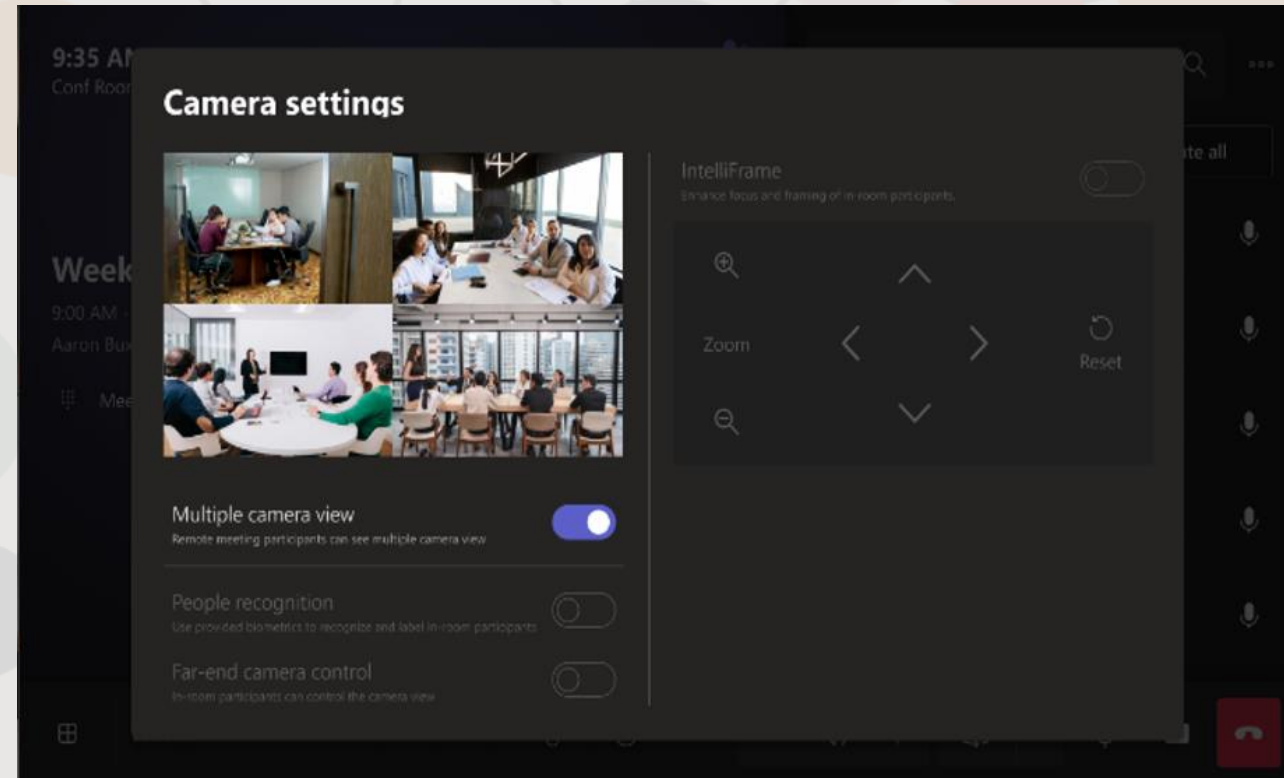

Preview of multiple camera view in Teams Rooms on Windows

When multiple camera views are enabled in Teams Rooms on Windows, the preview video on the front-of-room display and the camera settings dialog will show multiple camera views.

This feature allows in-room users to be aware of all camera feeds that are simultaneously streaming to remote users.

Available with the Teams Rooms Pro license.

Nuove Graph API per Teams Phone

Microsoft Teams: Microsoft Graph APIs for Teams administration now available in beta

 Archive  Share  Copy link  Mark as unread

Summary

Microsoft Graph beta now offers Teams administration APIs for user configuration, number management, and policy assignment. These enable automation and integration for Teams management, accessible with delegated or application permissions in commercial environments. Admins can begin exploring these APIs and ensure proper permission scopes.

Is this summary helpful?  

Microsoft Graph now includes APIs that support Teams administration scenarios through beta:

- Teams User Configuration API
- Number Management APIs
- Policy Assignment APIs

These APIs enable programmatic access to user configurations, telephone number management, and policy assignments—helping organizations automate and scale Teams management. They are designed to support extensibility, automation, and integrations with your existing tools and workflows.

MTRoW Update 5.4.210.0 (9/29/2025)

Introduced in this update:

- **Support for Facilitator agent in scheduled Teams meetings** Pro : When joining an assigned Teams meeting instance from a Microsoft Teams Room, participants in the Teams Room can experience all of the benefits of having Facilitator, including AI-generated notes, agenda and time tracking, AI queries from the web, etc. These features can be seen on the front-of-room display in the Teams Rooms, and is accessible to individual participants after the meeting instance via desktop and web.
- **Support for certified Touch Consoles connected to Touch board devices** Pro : You can now connect certified Touch consoles to Interactive touch board devices like the Surface Hub 3. Users can control the Teams Rooms experience either on the touchscreen or using the console.
- **Browser support for touch boards** Pro : Now you can access websites and line-of-business web applications using private browsing mode with Microsoft Edge on Teams Rooms on Windows touch boards, including Surface Hub 3. You can use the browser during meetings or outside of them, and admins can manage browsing policies via Pro Management Portal to ensure a secure and safe browsing experience. [Learn more.](#)
- **Recognition of in-room participants on meeting roster for Teams Rooms with Cloud IntelliFrame** Pro : Enrolled in-room participants during scheduled meetings are now recognized and listed in the meeting roster for remote attendees. Available only on Windows-based Teams Rooms using Cloud IntelliFrame. Requires the organization to enable face and voice recognition. Requires in-room participants to enroll with a recognition profile in Teams. Requires a scheduled meeting that lists the participant on the meeting invite.

MTRoW Update 5.4.210.0 (9/29/2025)

- **Manage voice and face recognition for rooms via device settings:** To simplify management and reduce configuration friction for voice and face recognition in Microsoft Teams Rooms (MTR), we're introducing new admin-facing settings in the Teams Pro Management Portal. These settings replace PowerShell-based configuration with a more intuitive UI, offering clearer visibility into recognition status across rooms.
- **Multiple camera view shown in preview video and camera settings dialog** Pro : When multiple camera views are enabled, the preview video on the front-of-room display and the camera settings dialog will show multiple camera views. This feature allows in-room users to be aware of all camera streams that are simultaneously streaming to remote users.
- **Support for multiple camera views and IntelliFrame from Teams Rooms on Windows in Teams webinar and structured meetings:** Multiple camera views and IntelliFrame (Multi-stream and Cloud) from Teams Rooms on Windows are now available in Teams webinar and structured meetings with "Manage what attendees see" enabled. Organizers and presenters of these meetings can access intelligent camera views and bring them on the live stage for attendees.

Microsoft Teams: Apps now supported in Shared Channels

Summary

Microsoft Teams now supports apps in Shared Channels, enabling bots, tabs, and message extensions for richer collaboration. Apps must be added per channel with new governance controls. Rollout starts October 2025. Admins and developers should update policies and app manifests for compatibility. Private Channel support will follow.

What's changing:

Apps can now be added to Shared Channels. Previously, only a limited set of tabs were supported.

This feature is available by default.

All apps marked to work in Shared Channels will be available.

Channel owners or members can add apps to a Shared Channel, with new governance and consent controls.

A new channel setting allows owners to control who can add apps.

Apps must be explicitly added to each channel; installing at the team level will no longer apply to Shared or Private Channels.

Cambio dei record per i puntamenti degli Accepted Domain

(Updated) DNS Provisioning Change

[Archive](#) [Share](#) [Copy link](#) [Mark as unread](#)

 Action required by Feb 1, 2026

Summary

Starting February 1, 2025, A records for new Accepted Domains will be provisioned under mx.microsoft instead of mail.protection.outlook.com to support DNSSEC adoption. Update any automation to use the List serviceConfigurationRecords Graph API for MX records by this date to avoid mail flow issues.

MAJOR UPDATE

ADMIN IMPACT

Updated October 2, 2025: We have updated the timeline. Thank you for your patience.

We're making some changes to DNS provisioning of A records for all new Accepted Domains provisioned after February 1st, 2025 (previously October 1st). Between early and late February 2026 (previously early October and late October), we will gradually switch provisioning of all A records for new Accepted Domains into the new subdomains under mx.microsoft.

We are doing this to reduce the friction of adopting DNSSEC in the long run. DNSSEC is a set of extensions to DNS that provides cryptographic verification of DNS records, preventing DNS spoofing and adversary-in-the-middle attacks to DNS.

Timeout nelle sessioni Outlook sul web

A gennaio 2026 verranno ritirate queste configurazioni custom in Exchange Online

Get-OrganizationConfig

ActivityBasedAuthenticationTimeoutEnabled

ActivityBasedAuthenticationTimeoutInterval

ActivityBasedAuthenticationTimeoutWithSingleSignOnEnabled

Varranno solo i seguenti timeout possibili:

- Microsoft 365 admin center,

Security & Privacy
Idle session timeout
- Conditional Access

Outlook on the web activity-based timeout is retiring

Archive Share Copy link Mark as unread

Summary

Outlook on the web's activity-based timeout (ABT) will retire by January 2026 (February for GCC/DoD). Admins must enable Microsoft 365 idle session timeout for consistent session control across apps. Users won't auto-sign out without it. Prepare by reviewing ABT use, enabling the new timeout, and updating documentation.

Is this summary helpful?  

Outlook on the web activity-based timeout is retiring

To simplify session timeout management and improve consistency across Microsoft 365 apps, we're retiring the activity-based authentication timeout (ABT) setting for Outlook on the web. Admins should transition to the Microsoft 365 idle session timeout, which provides a unified experience across supported Microsoft 365 web applications.

When this will happen:

The retirement will roll out in phases based on cloud environment:

- **Worldwide:** Early January 2026 to late January 2026
- **GCC, GCCHigh, and DoD:** Early February 2026 to late February 2026

News veloci su Exchange Onprem/Online

Exchange 2016 e 2019 fuori supporto dal 14 ottobre 2025: Uscita l'ultima Security Update.

C'è ancora un mese di grace period anche per apertura ticket tu questo ultimo update.

Se installate Exchange Subscription Edition ed un Windows Server 2025 possiede il ruolo di Schema Master si blocca la sync dello schema. Attendere la fix a breve.

Le grandi aziende con un account MS possono chiedere ed acquistare l'Extended Security Update (ESU) per avere gli update security di Exchange 2016 e 2019 fino ad Aprile 2026.

Da Novembre 2025:

- L'Exchange Hybrid funzionerà solo se configurata l'Exchange Hybrid App, niente più connessioni EWS verso MS365 per vedere freebusy delle mailbox online.
- Smettono di funzionare gli Exchange Legacy Token e verranno impattati gli Add-ins di Outlook senza la Nested App Authentication.
