News from Copilot e M365

Security Copilot in M365 E5

Agents are coming directly into the tools security and IT teams use every day across Microsoft Defender, Entra, Intune, and Purview — all powered by Security Copilot.

To make adoption seamless, Security Copilot is now included for all Microsoft 365 E5 customers. Rollout begins today for existing Security Copilot customers with Microsoft 365 E5 and will extend to all Microsoft 365 E5 customers in the coming months.

Customers will receive 30 days' notice before activation.

Security Copilot in M365 E5

Security operations teams can harness [agents that triage alerts in real time](#), surface actionable threat intelligence, and enable natural language threat hunting—so defenders can focus on what matters most: staying ahead of cyberattackers.

Identity and access admins can deploy [new agents in Microsoft Entra](#) to protect across layers of identity: proactively remediating risky users, optimizing Conditional Access policies, streamlining access reviews, and managing app lifecycles to reduce risk and improve efficiency.

Data security professionals can use [agents in Microsoft Purview](#), to strengthen data security by discovering, analyzing, and remediating sensitive data risks—combining proactive posture management with intelligent triage to reduce manual work and help continuous risk reduction.

IT admins can use the new [agents in Microsoft Intune](#) to make complex tasks easier and security stronger by turning requirements into policies, assessing changes before they impact productivity, and identifying devices for removal— for smarter decisions, better compliance, and reduced risk.

Agents to empower roles across security and IT

 Microsoft Defender	 Microsoft Entra	 Microsoft Intune	 Microsoft Purview
Phishing Triage	Access Review	Change Review	Data Security Triage
Dynamic Threat Detection	Conditional Access Optimization	Vulnerability Remediation	Data Security Posture
Threat Intelligence Briefing	App Lifecycle Management	Device Offboarding	
Threat Hunting	Identity Risk Management	Policy Configuration	

Partner-built Security Copilot agents

Build your own Security Copilot agents

Copilot Connectors

Era solo questione di tempo, e ora sono arrivati, i Copilot Connectors

Il connettore per **File Server** è già disponibile, mentre quello per **SharePoint Server** è in Preview.

Unified Search: i dipendenti possono trovare documenti su SharePoint, OneDrive, Teams e condivisioni file legacy, il tutto da un'unica casella di ricerca.

Copilot può utilizzare documenti on-premise per rispondere a domande, riepilogare file e fornire approfondimenti.

Individuazione più rapida di informazioni critiche nascoste in strutture di cartelle complesse.

Approccio ibrido ai dati: perfetto per le organizzazioni non ancora pronte per una migrazione completa al cloud, permette di continuare a utilizzare le condivisioni file SMB sbloccando al contempo le moderne funzionalità di intelligenza artificiale e ricerca.

The screenshot displays the Microsoft 365 admin center interface. On the left is a navigation sidebar with options like 'All tenants', 'Home', 'Copilot', 'Overview', 'Connectors', 'Search', 'Billing & usage', 'Settings', 'Agents', 'Users', 'Devices', 'Teams & groups', 'Roles', 'Resources', 'Marketplace', 'Billing', 'Support', 'Settings', 'Setup', 'Reports', 'Health', and 'Admin centers'. The main content area is titled 'Connectors' and includes a search bar and a 'Recommended' section. In this section, the 'FileShare' connector (Microsoft, Traditional network file shares...) is highlighted with a red rectangular box. Other connectors listed include Azure DevOps Work Items, Confluence Cloud, Enterprise websites Cloud, GitHub Cloud Know..., Gong, Google Drive (marked as PREVIEW), Jira Cloud, ServiceNow Knowledge, ServiceNow Tickets, and ServiceNow Catalog. A banner at the top right promotes 'Power decision-making with your organization's data'.

Copilot Connectors

Sicurezza garantita: le autorizzazioni NTFS vengono rispettate: gli utenti vedono solo ciò che è loro consentito.

Come funziona

Installa Graph Connector Agent, collega le Share di rete e Microsoft 365 eseguirà la scansione, l'indicizzazione e la sincronizzazione dei tuoi contenuti in modo sicuro.

Il risultato

Un ambiente di lavoro più intelligente e connesso, in cui l'intelligenza artificiale può finalmente sfruttare tutte le conoscenze organizzative, sia nel cloud che on-premise.

Teams Mode for Microsoft 365 Copilot

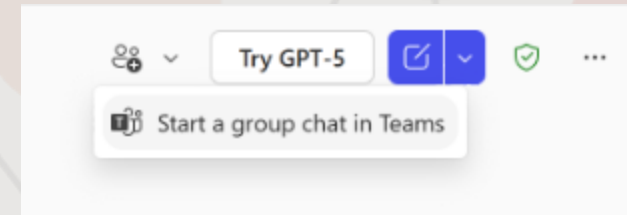

When you'd like to extend your 1:1 Copilot conversation into a group conversation, simply select **"start a group chat"** in the top-right corner of the Microsoft 365 Copilot app.

This creates a group chat in Teams with your colleagues and Copilot, making it easy for others to build on your work.

You choose which messages you'd like to bring forward to the group, ensuring any prompts or responses you don't want to share are kept private.

Now by typing [copilot](#) in the group chat, each member of the group can request help from Copilot.

You can also add Copilot to any existing Teams group chat, just like adding a teammate, to help your team research, draft, coordinate, and complete tasks with AI.

<https://techcommunity.microsoft.com/blog/microsoft365copilotblog/introducing-teams-mode-for-microsoft-365-copilot/4463259>

Project OPAL (Frontier)

- **Frontier**, in Microsoft 365 Copilot, è uno spazio di accesso anticipato ad agenti e funzionalità AI avanzate che permettono di sperimentare innovazioni prima del rilascio generale (Preview)
- **Project Opal** è una funzionalità di Frontier che automatizza task ripetitivi tramite un agente AI che esegue workflow complessi monitorabili in tempo reale
 - Descrivi il task in linguaggio naturale; il sistema genera un piano, avvia una Windows 365 Cloud PC dedicata e usa un agente di “computer use” per navigare app web aziendali, siti e portali (compilare form, raccogliere evidenze, eseguire workflow multi-step), mentre tu puoi monitorare in tempo reale, mettere in pausa o prendere il controllo quando serve.
- Per usare Opal servono:
 - licenza Microsoft 365 Copilot
 - Abilitazione da parte dell’admin nelle impostazioni Copilot/Frontier
 - Accesso dal modulo Frontier nell’app Microsoft 365 Copilot
 - Opal appare come esperienza automatizzata dedicata ai job/task.

Vibe.Powerapps.Com

What is Vibe.Powerapps

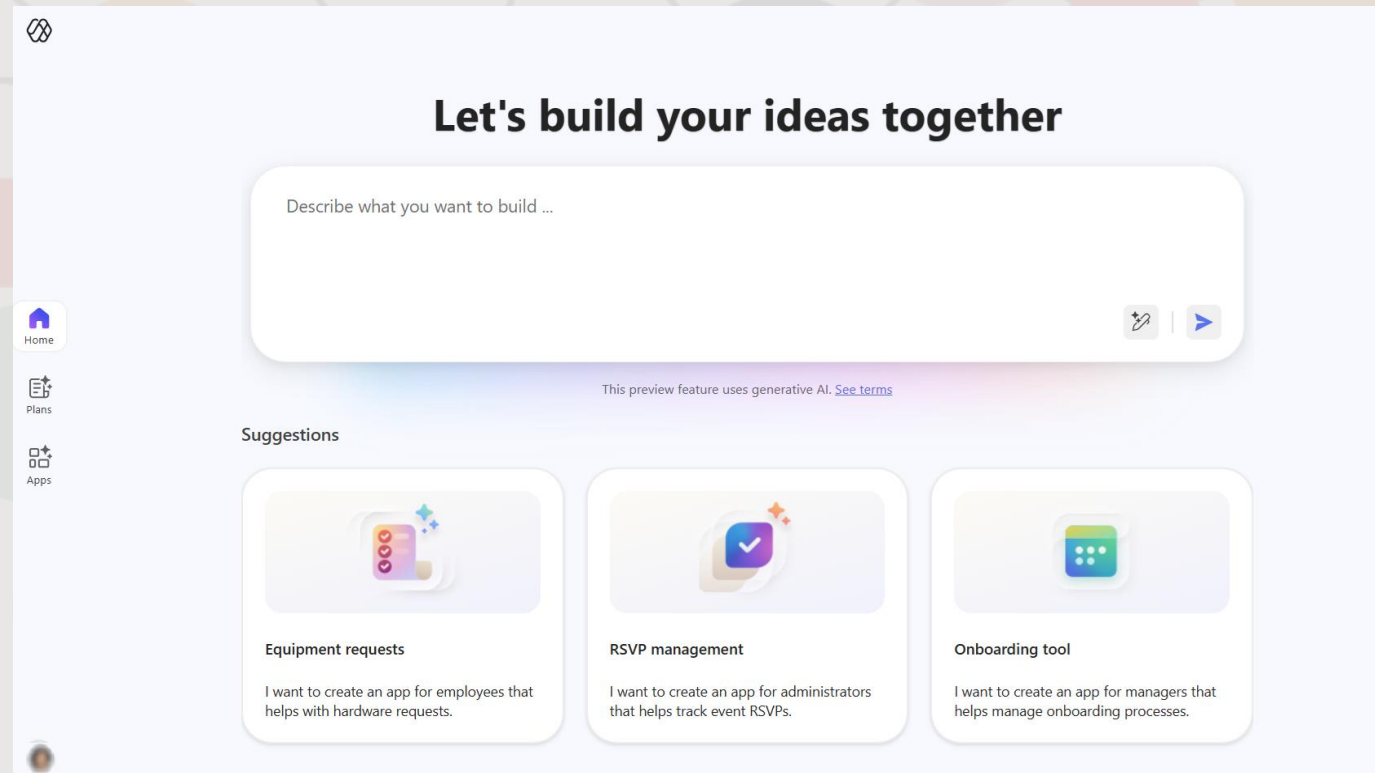

New developer experience for Microsoft Power Apps.

Instead of manually designing UI or using drag-and-drop canvas/model apps, you now “describe your idea in natural language,” and AI-powered agents generate (in real-time) a full stack application: requirements, data model (via Microsoft Dataverse), code (React-based app), and a working preview all from a prompt

What changed vs old Power Apps

Whereas traditional Power Apps relied on low-code drag-and-drop and configuration or manual code for more advanced “Code Apps,” Vibe adds a prompt to full-stack app paradigm

Also, increased integration with AI-agents and (optionally) with Microsoft 365 Copilot to help build or interact with the app in intelligent ways.

Agent IDs

With Agent IDs, you get a dedicated identity type that allows you to track, audit, and govern AI agents just like humans or applications.

This solves a key gap: before, AI agents were often run under general “service principal / app” identities making it hard to distinguish agent-actions from app actions or user-actions.

Now every agent can be uniquely identified.

If your org uses many bots/agents, agent identities make it possible to dynamically create & retire identities, avoid “orphaned service principals,” and keep permissions tight and temporary.

Identity	What It Represents	How It Authenticates	Best For
User	A human	Passwordless / MFA / passkeys	Human sign-in, collaboration
App (Service Principal)	A software application or service	Client secret / certificate	Back-end services, APIs, automation
Agent (Agent ID)	An AI agent or autonomous workflow	Token-based, no human creds	AI agents, bots, ephemeral automation

Microsoft Entra ID Account Recovery

Full recovery in worst-case scenarios: If a user loses their phone, authenticator app, security keys, or forgets password and has no backup SSAR gives a path to regain access.

Because SSAR relies on high-assurance identity proofing (e.g. Verified ID, document + biometric verification), it reduces the attack surface for social-engineering or help-desk impersonation attacks. Microsoft Learn

Better support for passwordless / modern authentication rollouts: When moving away from password + MFA toward passkeys, FIDO keys or certificate-based auth, SSPR may no longer be sufficient as fallback. SSAR fills that gap, letting users recover even if they lost their passkey or hardware token.

SSPR depends on the user having at least one recovery method already configured. If the user loses all methods (phone, token, device), SSPR offers no help.

For passwordless environments (passkeys, FIDO keys), SSPR doesn't provide an alternative meaning a lost token = locked out with no fallback.

Aspect	Self-Service Password Reset (SSPR)	Account Recovery (SSAR)
Primary use case	User forgot password, but retains access to authentication methods	User lost access to all authentication methods
Authentication requirement	At least one registered authentication method (policy controls can require up to 2 methods)	Identity verification through certified partner
Trust assumption	User's identity is verified through existing methods	User's identity must be re-established
Recovery scope	Password only	Complete authentication method reset
Technology dependency	Existing MFA methods, security questions	Identity verification services, Verified ID
Security level	Medium - relies on pre-registered methods	High - requires comprehensive identity proofing

Microsoft Entra Conditional Access Optimization Agent (Updated)

Automates review of Conditional Access (CA) coverage across users, apps, and agent identities.

Detects gaps, overlaps, redundant policies — streamlines CA policy hygiene.

Enforce baseline security: MFA, device compliance/app protection, domain-joined devices, block legacy authentication and device-code flow.

Propose consolidating similar CA policies to reduce complexity.

For organizations using Microsoft Intune: cross-checks device/app compliance, suggests policies to enforce compliance for access.

Runs automatically once activated, re-scanning every 24 h (or on-demand).

Provides suggestions in “report-only” mode by default

The agent is next scheduled to run on July 2, 2025 at 1:05 PM

About this agent

The agent scans all new users and apps added in the last 24 hours to assess their applicability to Conditional Access policies enforcing multifactor authentication, device compliance, and blocking legacy authentication and device code flow. It reviews existing enabled policies to suggest consolidations, recommends changes aligned with Zero Trust best practices, and creates new policies in report-only

Interpreter agent support in MTRoW

Microsoft Teams: Interpreter agent support in Teams rooms on Windows

■ □ □ IN DEVELOPMENT

ROLLOUT START

December 2025

Microsoft Teams

The Interpreter agent acts as a translator in Microsoft Teams meetings, allowing participants to listen to the meeting in their chosen language with real-time translation so speaking different languages isn't a barrier to effective understanding and collaboration. It's now available in Teams Rooms on Windows licensed for Teams Rooms Pro.

Assisted Drill-Through template for CQD in Power BI

Key Features:

- Enhanced Troubleshooting: Quickly identify locations, ISPs, and subnets associated with poor quality.
- User-Friendly Interface: Simplified navigation and intuitive visualizations to streamline the troubleshooting process.
- ML-Based Classifiers: Utilize intelligent media quality classifiers to detect problem areas with precision.
- Noise Suppression telemetry: Useful to identify endpoints unable to download the AI models due to network configuration issues.
- Comprehensive Reporting: Detailed reports that provide insights into various media types and network conditions.

<https://learn.microsoft.com/en-us/microsoftteams/cqd-power-bi-query-templates>

MTRoA 1449/1.0.96.2025328903 (November 2025)

1449/1.0.96.2025328903 (November 2025)

Resolved issues:

- Custom background is removed after a device reboot or firmware update.
- Touch console shows a blank screen after a device reboot.
- Front-of-room display dims and powers off while a call/meeting is in progress.
- Join by ID icon does not appear on the home screen.
- Unable to rejoin cross cloud meetings.

Note

This update is currently available to all device manufacturers except Audiocodes.

Updated Microsoft Teams Android Devices Support dates

MS ha aggiornato la pagina sul supporto dei device Android, estendendo di 1 anno la "vita" dei dispositivi con Android 12 o superiore.

I device con versioni più vecchie invece non sono stati modificati (fine supporto 3/9/2027)

Android OS version	Microsoft Teams Certification end date	Microsoft support end date
Android 9	August 5, 2023	August 5, 2025
Android 10	September 3, 2026	September 3, 2027
Android 11	September 3, 2026	September 3, 2027
Android 12	August 15, 2028	August 15, 2030
Android 13	August 15, 2028	August 15, 2030
Android 14	October 4, 2029	October 4, 2031
Android 15	October 15, 2030	October 15, 2032

<https://learn.microsoft.com/en-us/microsoftteams/devices/android-version-support>

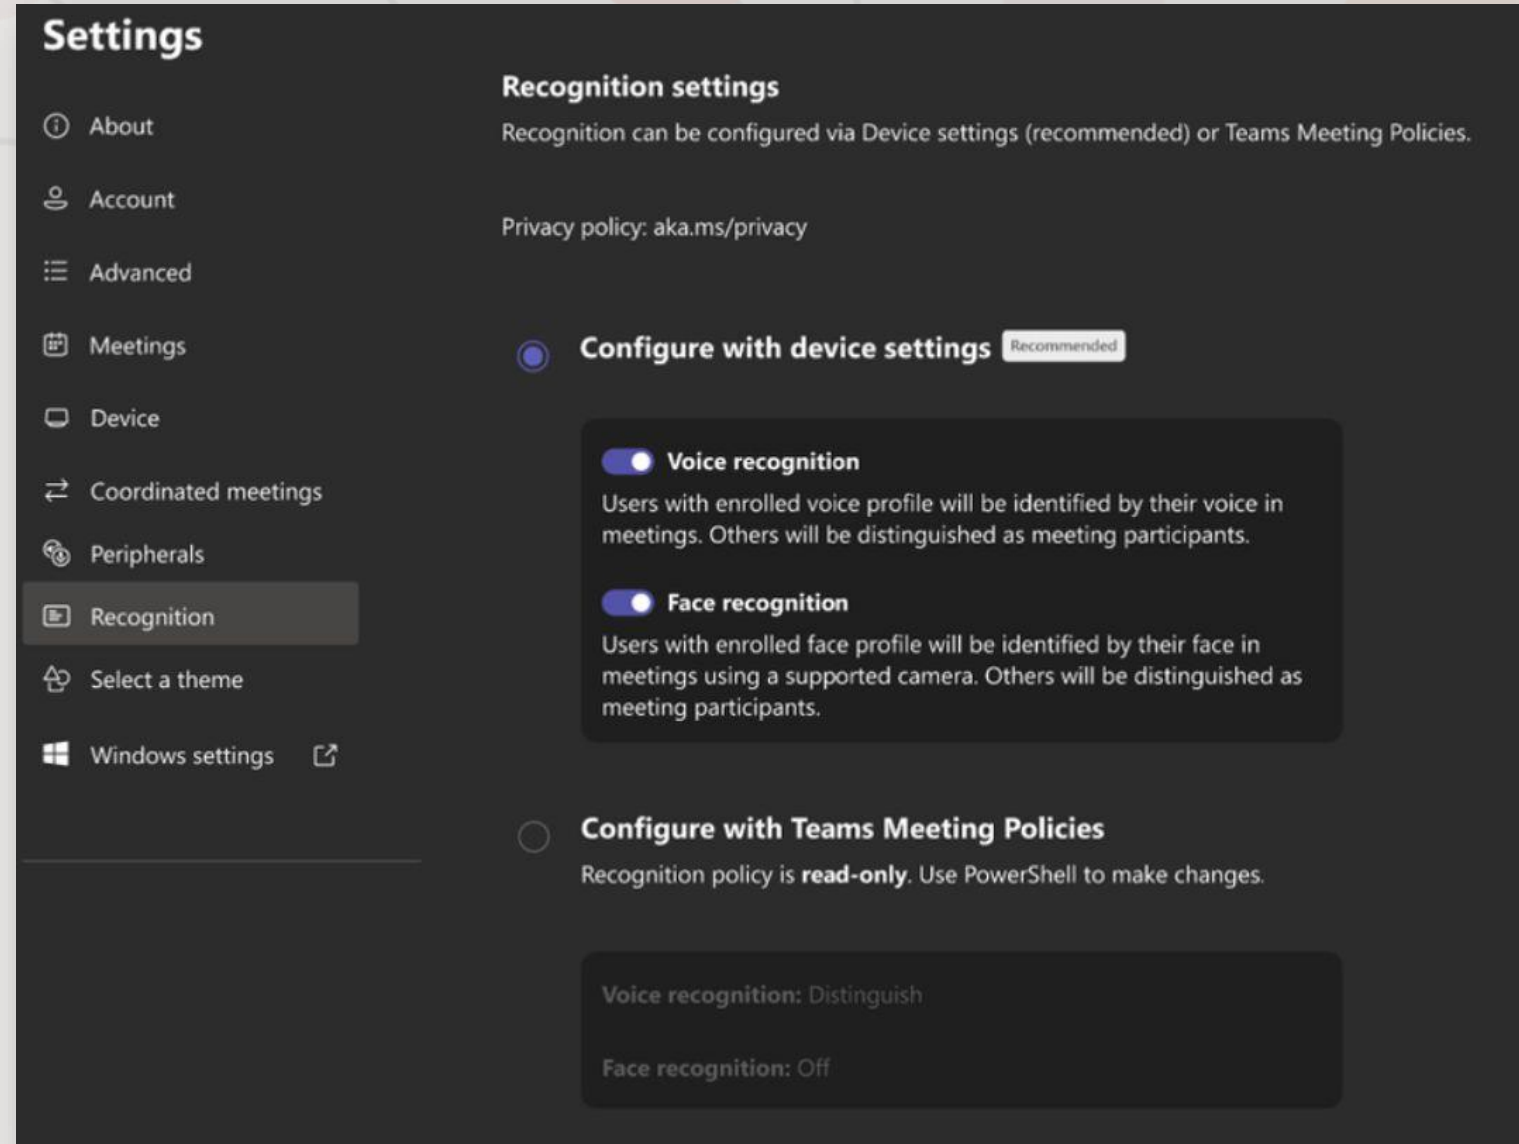

Simplified device settings for voice and face recognition on MTRoW/A

Simplified device settings for voice and face recognition on Teams Rooms on Windows or Android

It's now easier for admins to enable the benefits of Copilot and intelligent audio and video features for users in Teams Rooms through a new user interface and admin settings.

These new settings, on the device and in the Pro Management portal, simplify configuration and remove the requirement to use PowerShell, offering improved visibility across rooms.

Enhancements to external collaboration [Public preview]

Chat with anyone

Users in SMB organizations can start a conversation from Teams with anyone using just their email address, even if they're not on Teams.

Whether you're working with a vendor, client, or partner, simply type their email, send your message, and they'll receive an invitation to join the chat as a guest.

From there, they both reply and start a call—just like they would if they were part of your organization.

And because this experience is built on Teams' existing guest access framework, IT admins retain control. External access policies, multifactor authentication, and organizational compliance settings are respected.

Sharing a file or a Loop

Now you can share a file or a Loop component in an external chat.

Whether you drag and drop, attach from your device, or paste a link, Teams recognizes the file, unfurls it in the compose box and shares it with the chat participants when you send the message.

You can also adjust permissions before sending.

As a recipient, you can now view the content right from the chat - no account switching required.

Sharing is controlled by an admin toggle, which is **off by default**, giving organizations flexibility to enable or disable external sharing as needed.

Activity in other accounts and organizations

Users can view and respond to activity across multiple tenants without switching accounts.

You can triage notifications, reply to chats, and pin tenants to the left rail for quick access.

This reduces context switching and makes cross-org collaboration feel native—especially useful for users working with multiple vendors or clients.

The screenshot displays the Microsoft Teams interface. On the left, a sidebar contains navigation icons for Activity, Chat, Calendar, Calls, and Apps. The 'Activity' tab is selected, showing a list of notifications. The main pane shows a chat conversation with 'Serena Davis'. The chat history includes messages about a break, lunch plans, and a reservation. A notification from 'Daniela Mandera' is highlighted with a red border. The bottom of the chat shows a message input field and a list of emojis.

External collaboration Admin Presets

Admins have access to a new overview page in the Teams admin center under the external collaboration section.

This page allows admins to review and modify their organization's external collaboration settings.

To make changes, admins can use a guided flow and select either the open or controlled preset modes, or choose to customize the settings.

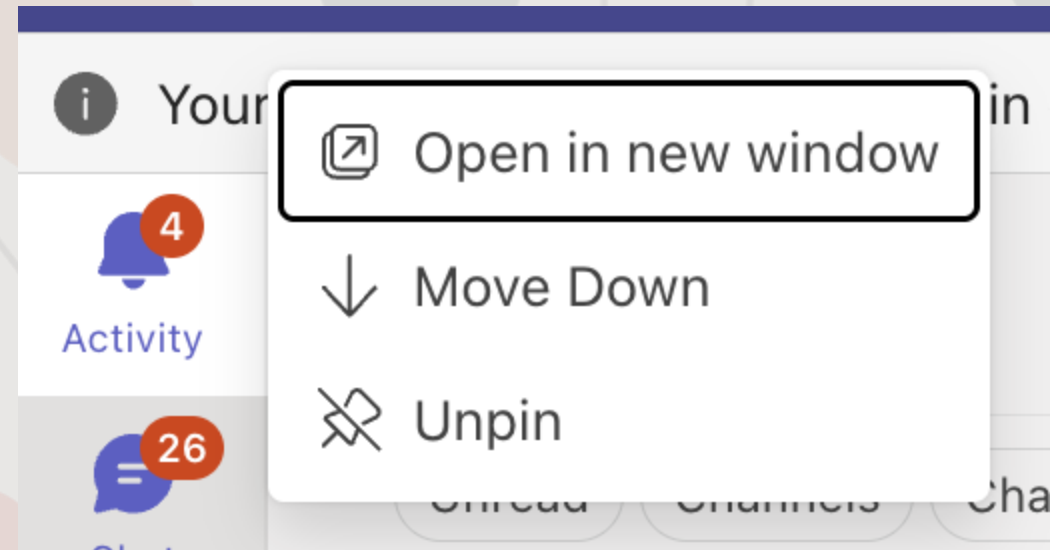

Pop out your core Teams functions into a new window [Public preview]

You can now organize your work environment to fit your needs by opening Teams chat, calls, calendar, activity, and more in separate windows.

This gives you the flexibility to multitask and organize your workspace the way you want.

Whether you're catching up on chats while reviewing call history or managing notifications alongside your calendar, this update helps you stay productive without switching tabs.

Just right-click an app icon or use the app flyout to pop it out into its own window.

Enhancements to Facilitator Agent

Facilitator can now recognize an agenda shared directly in the meeting chat, in addition to the meeting invite and meeting notes.

Once detected, it automatically builds a live progress tracker at the top of the meeting, giving everyone a shared sense of where they are and what's next.

If someone who's invited hasn't joined yet, and their name comes up twice in conversation, the agent politely pings them in chat and nudges them to hop in, helping you bring the right people into the discussion at the right time.

And when it's time to turn discussion into action, **you can ask Facilitator to draft documents in Word or Loop based on what was said in the meeting.** It can shape the conversation into whatever output you need, whether that's a blog, a whitepaper, or a project brief, helping your team turn ideas into action faster.

As tasks agent captures and assigns them. You are mentioned, the can also direct it through chat to add, update, or reassign tasks.

Meeting recap templates

Staying aligned after a meeting shouldn't mean settling for a one-size-fits-all recap.

With our new customizable recap templates, you can shape your AI-generated notes to match exactly how your team works.

Choose from two ready-made templates, a Speaker Summary that organizes insights by participant, or an Executive Summary that highlights key takeaways at a glance.

And for teams who prefer their own style, you can design custom templates using a simple free-text prompt: just describe the structure you want—even paste in a format you've used before—and your AI notes will instantly adapt.

You can also save your custom templates for future reuse, giving every meeting the same level of clarity, consistency, and efficiency.

Available in public preview on both desktop and mobile in December.

The screenshot displays the Microsoft Teams interface for a meeting titled "Product roadmap discussion". The top navigation bar includes tabs for "Chat", "Files", "Details", and "Recap", with the "Recap" tab currently selected. A "Join" button and a "Close" button are visible in the top right corner. Below the navigation bar, the meeting date and time are shown as "Jan 21, 2023 10:00 AM - 11:00 AM". The main content area is divided into two sections. The left section, titled "Product Roadmap Discussion", shows a video player with a dark background and white text. Below the video player, there is a "Speakers" tab selected, showing a list of participants: Mona Kane, Babak Shammas, Daniela Mandera, Amanda Brady, and Bruno Zhao. Each participant has a horizontal bar representing their speaking time. The right section, titled "Content", shows a list of files: "Product Roadmap Q4 report.pptx" and "Marketing budget.docx". Below the files, there are tabs for "Notes", "AI summary", "Custom summary", "Mentions (3)", and "Transcript". The "AI summary" tab is selected, showing a list of meeting notes. The notes are organized into sections: "Meeting notes" and "Follow-up tasks". The "Meeting notes" section includes three bullet points: "Product Vision and Brand Alignment", "Customer Feedback Integration", and "Marketing and Launch Strategy". The "Follow-up tasks" section includes two bullet points: "Vision & Messaging One-Pager" and "Roadmap Re-prioritization & Capacity Plan".

Meeting notes

- Product Vision and Brand Alignment: Mona opened the meeting by aligning the upcoming product roadmap with the brand promise of being reliable, simple, and inclusive across industries. The team confirmed north-star scenarios, messaging guardrails, and visual/voice guidelines to ensure consistency from product to marketing.
- Customer Feedback Integration: Daniela presented a synthesis of recent feedback from surveys, support cases, and telemetry. Common themes included onboarding clarity, feature discoverability, and configuration complexity. The group agreed to close the loop with contributors and translate the themes into prioritized backlog items with measurable outcomes.
- Marketing and Launch Strategy: Amanda and Bruno walked through the launch approach and content narrative, focusing on outcome-led storytelling and compliance-ready messaging. The plan includes a lightweight teaser, a staged rollout, and clear success metrics (awareness, trial starts, adoption, and retention), with measurement built into dashboards.

Are these notes useful?

Follow-up tasks

- Vision & Messaging One-Pager: Publish a concise positioning and value-props brief for internal alignment and asset creation. (Mona, Amanda)
- Roadmap Re-prioritization & Capacity Plan: Update the delivery plan to reflect scope changes, risk owners, and milestone checkpoints. (Babak)

Branded reactions [Private preview]

Visual identity shapes how your organization shows up. Whether it's a client presentation, an internal milestone, or a seasonal event, the right visuals set the tone and reinforce your brand

With new branded reactions, organizations can now extend their visual identity directly into meetings. IT admins simply upload custom reaction icons reflecting brand elements or event themes, and these instantly become available for meeting participants.

Every clap, thumbs-up, or celebration now aligns with your organization's look and feel.

A simple way to create more cohesive, on-brand meeting experiences. Branded reactions will be available in private preview in December.

The screenshot shows a Microsoft Teams meeting interface. At the top, the meeting title is "Marie Beaudouin" and the time is "22:06". The top bar includes icons for Chat, People, Raise, React, View, Notes, Rooms, Copilot, Whiteboard, Apps, More, Camera, Mic, and Share. A red "Leave" button is on the right. Below the top bar, a browser window displays the "Channel Budget Marketing.xlsx" file. The spreadsheet has a green-themed header "Marketing Budget 2025". It contains two charts: a bar chart titled "Category wise Marketing Allocation" and a donut chart titled "Anticipated Sales Total". The bar chart shows marketing allocation across categories: Direct Marketing Total (\$000), Agent/Broker Total (\$000), Distributor Total (\$000), Retailer Total (\$000), CAR Total (\$000), and Other Expenses Total (\$000). The donut chart shows the anticipated sales total by month: Jan (26%), Feb (9%), March (26%), April (35%), May (9%), and June (9%). The bottom of the spreadsheet shows a table with columns for "Column1", "Rate", and months from Jan to Dec, with a "Total" column. The "ANTICIPATED SALES TOTAL \$(000)" row shows values: 7.500, 20.000, 50.000, 150.000, 120.000, 150.000, 150.000, 180.000, 250.000, and 1.277.500. On the right side of the Teams window, a vertical list of participants is shown: Aadi Kapoor, Daniela Mandera, Aaron Buxton, and a fourth participant. A "1 / 2" indicator is visible between Aaron Buxton and the fourth participant.

Column1	Rate	Jan	Feb	March	April	May	June	July	Aug	Sept	Nov	Dec	Total
ANTICIPATED SALES TOTAL \$(000)		7.500	20.000	50.000	150.000	120.000	150.000	150.000	180.000	250.000			1.277.500

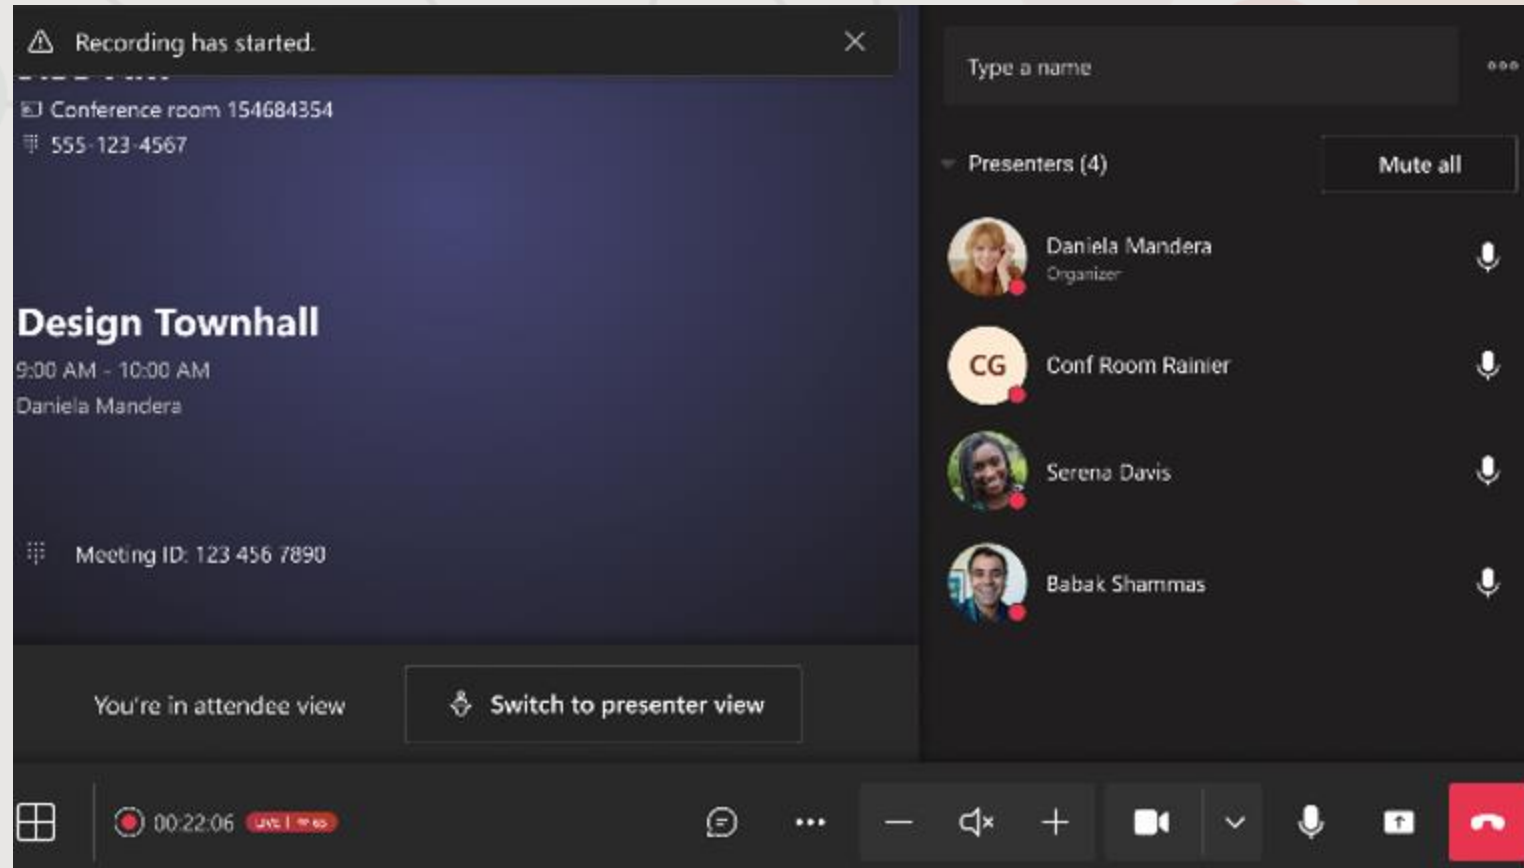

Front-of-room view control for Town Hall in Teams Rooms on Android

When a Teams Rooms on Android is invited as a meeting presenter, the front-of-room display defaults to the attendee view.

Presenters always have full control from the console, including green room and off-stage management, and can switch the front-of-room display to presenter view without impacting attendees.

This feature was released for Teams Rooms on Windows in October 2025. Available in Teams Rooms Pro

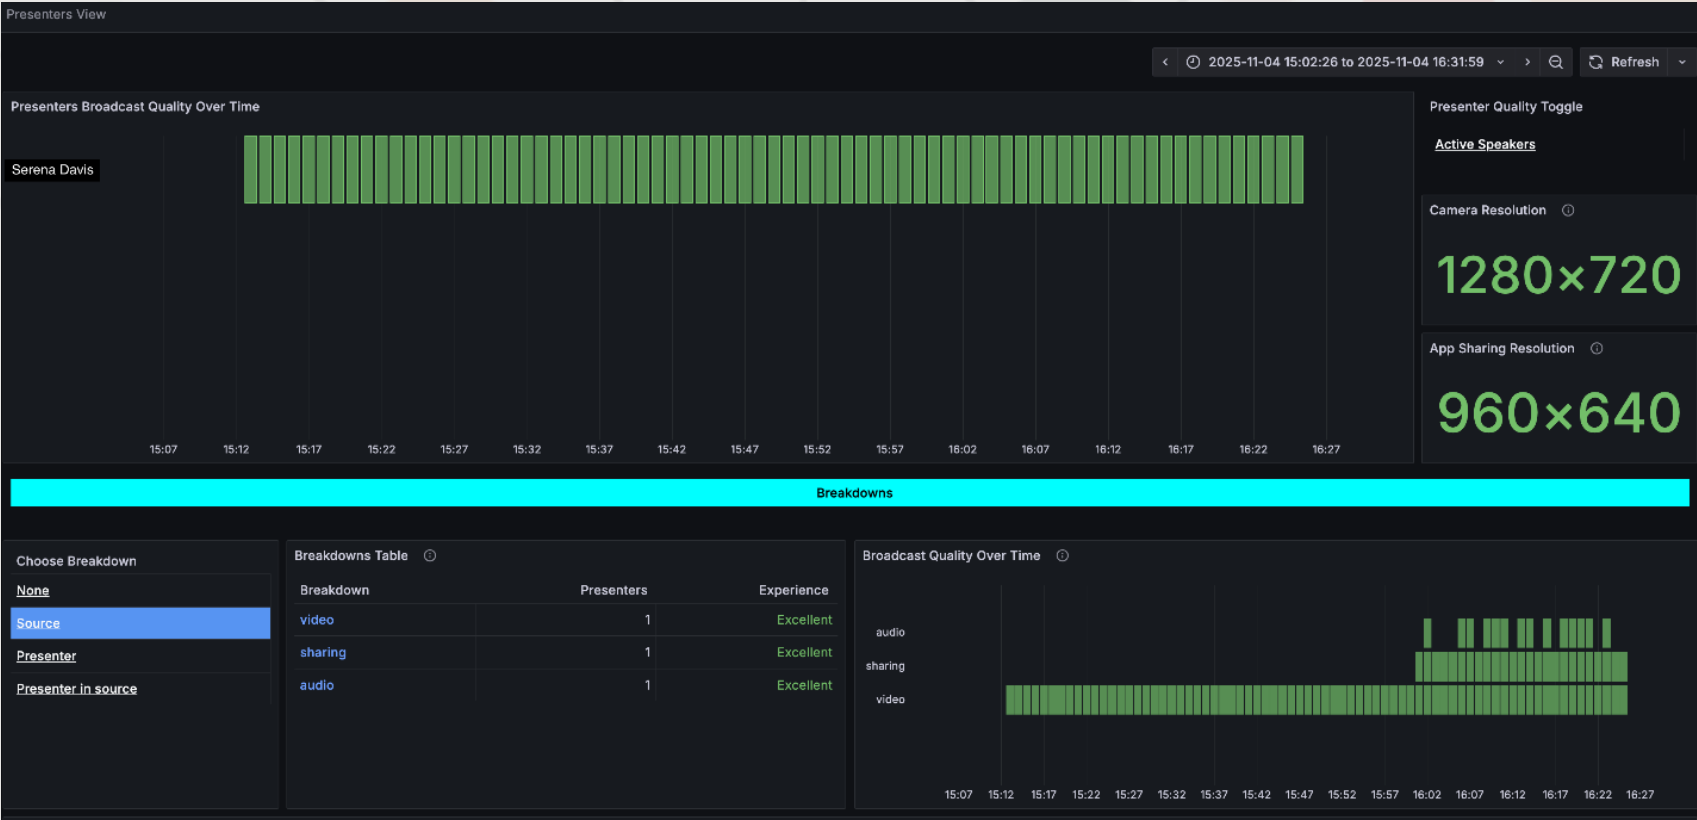

Teams Town hall insights – Presenter analytics

Presenter analytics for town hall provides organizers with visibility into the health of the presenter’s stream, providing insights covering video quality, audio clarity, and connection stability.

Whether it’s a town hall, live training session, or an all-hands meeting, organizers can now proactively ensure presenters deliver their content without interruptions, boosting confidence and elevating the attendee experience.

Presenter analytics is generally available today for all town hall organizers with a Teams Premium license

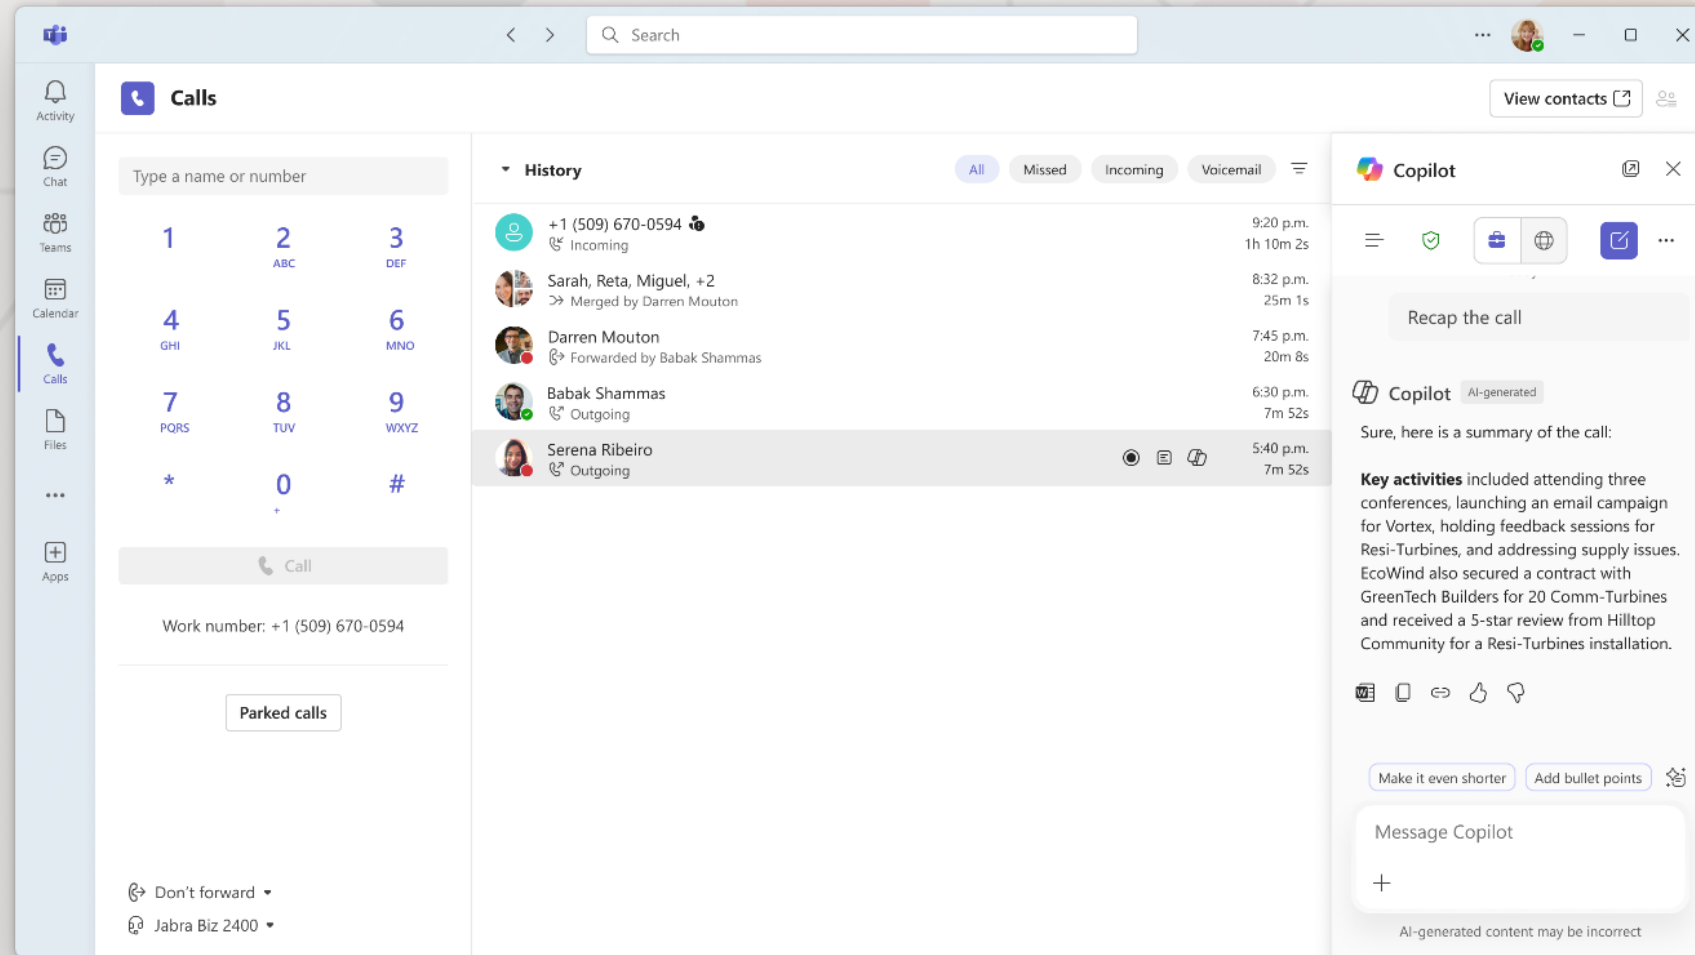

Microsoft 365 Copilot chat in Calls app post-calling experience

The post-call Copilot experience for Teams Phone on desktop and in Teams mobile iOS is now powered by Microsoft 365 Copilot Chat.

After a call ends, users can open Microsoft 365 Copilot Chat as a side panel in the Teams 'Calls' app to generate summaries, surface key insights, and get suggested next steps.

By using data from Microsoft Graph and the web—not just the call transcript—Microsoft 365 Copilot Chat delivers responses that are more personalized, relevant, and actionable, helping users quickly move from conversation to follow-up.

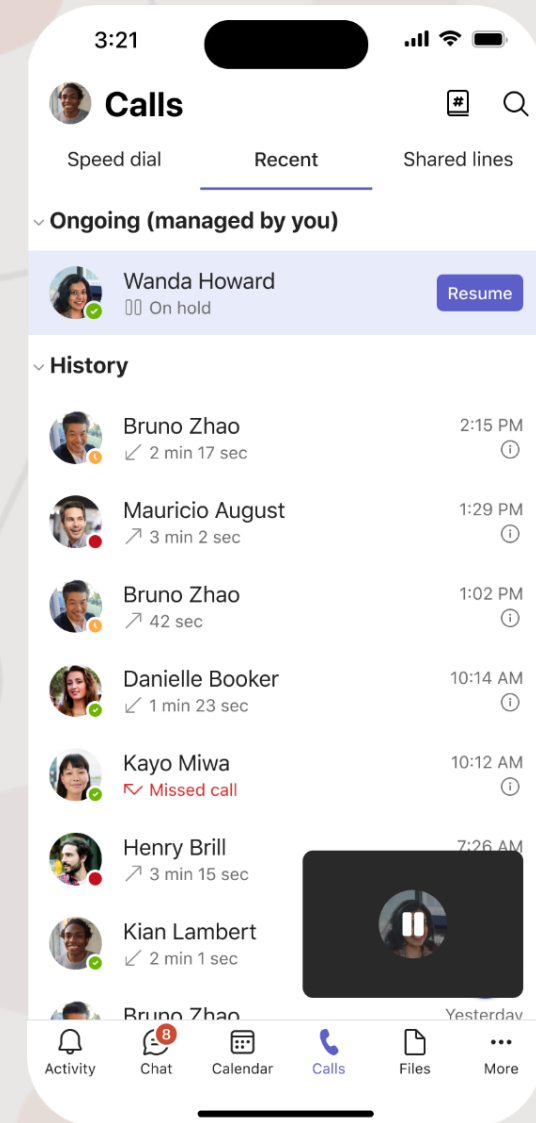

Teams mobile: Shared call line pickup indicators

Delegates can resume a Teams Phone call placed on hold from any shared line directly from Teams on their mobile phone.

Clear line labels and “answered/resumed by” indicators show who is handling the call and from which line, so teammates can step in to resume a call on hold without confusion.

For example, in a retail store, if a customer call is put on hold at the front desk, a floor associate can pick it up from their mobile device, ensuring the customer doesn’t wait long and the call isn’t abandoned.

This helps teams keep calls moving and maintain service continuity across shifts.

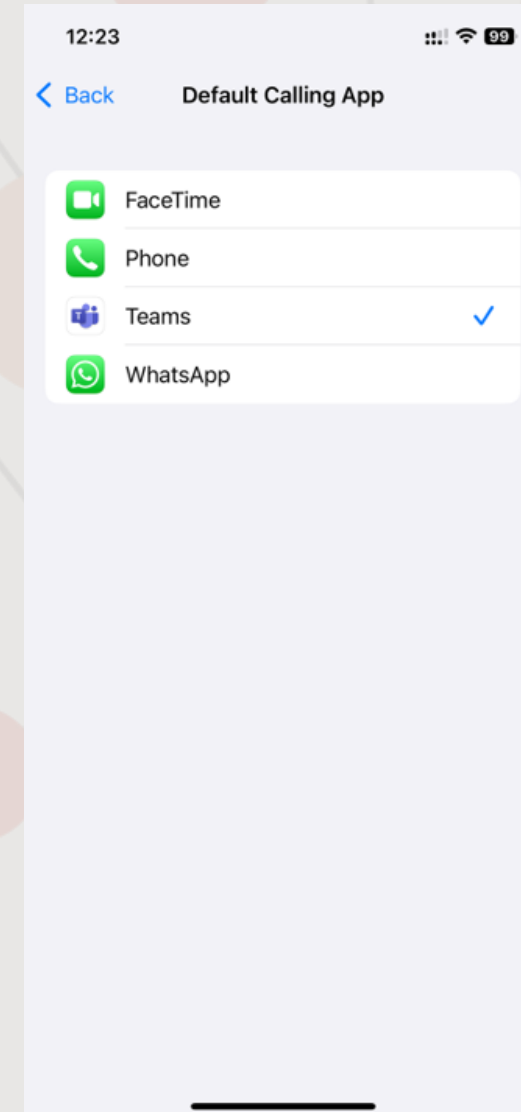

Set Teams Mobile as Your Default Calling App

We're making it easier for Teams Phone users to stay connected and productive on the go.

With this update, you can now set Teams mobile as your iPhone or Android mobile phone's default calling app. This means every call you initiate—from Contacts, Call History, or any app—will automatically route through Teams mobile instead of the native dialer.

For organizations with regulatory requirements, this capability supports more calls occurring under the enterprise-grade security and compliance policies set up for Teams.

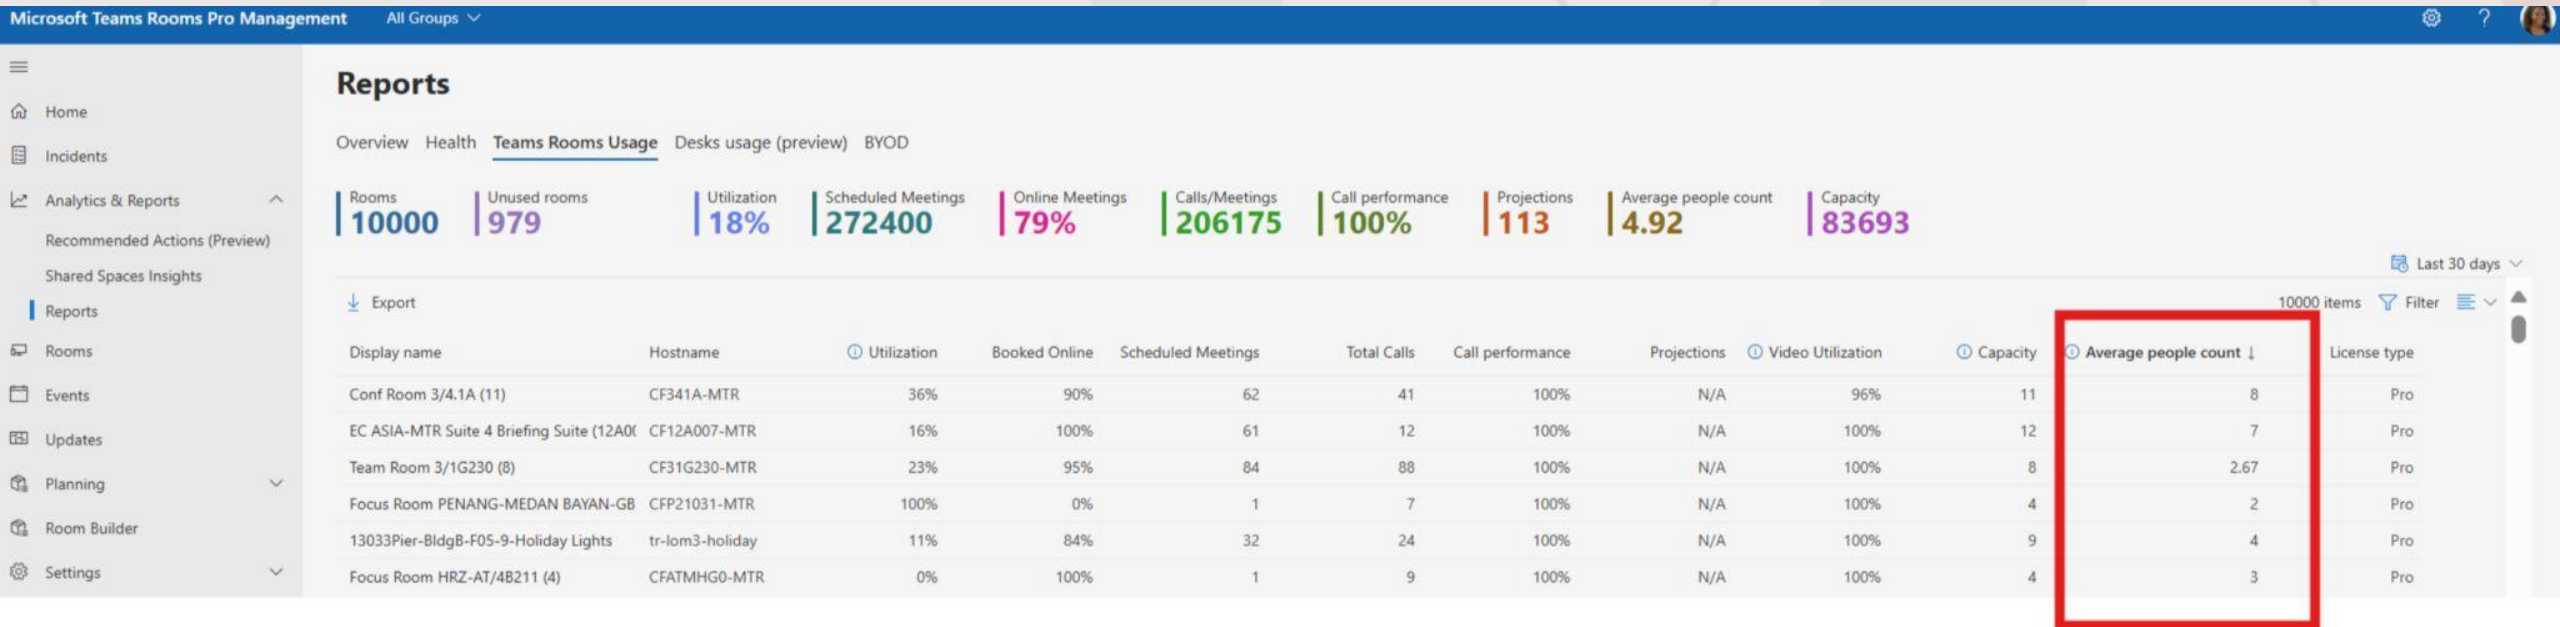

People Counting in the Pro Management Portal for Teams Rooms on Windows

Officially rolled out People Counting in the Pro Management Portal for Teams Rooms on Windows — powered by Cloud IntelliFrame.

- Enhanced visibility: Get real-time people count data during meetings.
- Smarter space planning: Understand how rooms are actually being used.
- Better optimization: Make data-driven decisions about room size, capacity, and layout.

Until now, room utilization was mostly guesswork. With this update, IT admins finally have actionable insights to make hybrid meeting spaces more efficient and cost-effective.

The People Counting feature is available during meetings for Teams Rooms on Windows licensed with Teams Rooms Pro.

Miracast support to Teams Rooms on Windows (Pro license only)

Microsoft Teams: Miracast support for Teams Rooms on Windows devices

Microsoft Teams

In addition to Teams Cast and HDMI ingest; you are able to share wirelessly using Miracast with Teams Rooms on Windows devices including touch boards. Available in Teams Rooms Pro.

ROLLOUT START

December 2025

Yealink MP66W Wi-Fi based Teams device (non disponibile)

The MP66W Wi-Fi based wireless Teams device gives you the freedom to connect wherever work takes you.

Designed for organizations with a mobile workforce, the Yealink MP66W wireless Teams device enhances wireless communication for the modern workplace.

Currently undergoing certification as a Teams Device, this will be one of the industry's first Wi-Fi-enabled wireless devices for Microsoft Teams, delivering greater mobility and reliability for frontline and hybrid workers.

Built with a durable casing for demanding environments, such as construction job sites, it enables native Teams wireless calling—your desk is wherever there's Wi-Fi.

AI-powered noise cancellation ensures clear conversations even in noisy settings, and its long-lasting battery keeps you powered through extended shifts. Plus, a dedicated emergency alert button provides instant safety when every second counts.

Wireless Teams Phone Device

+39 Teams Phone Italian Experts

Chat di Teams con 48 tecnici superspecializzati

- Scambio di opinioni sulle funzionalità della telefonia tradizionale (PSTN) in MS Teams
- Chiarimenti su tecniche di configurazione di SBC, Media Gateway, telefoni nativi e compatibili in MS Teams
- Condivisione di esperienze ed appuntamenti tecnici sulle tematiche specifiche del gruppo

News from Purview

Enhanced Microsoft Purview Data Security Posture Management (DSPM) experience

Outcome-based guided workflows

Microsoft Purview DSPM now uses outcome-based guided workflows to eliminate guesswork and help admins focus on the results they want to achieve.

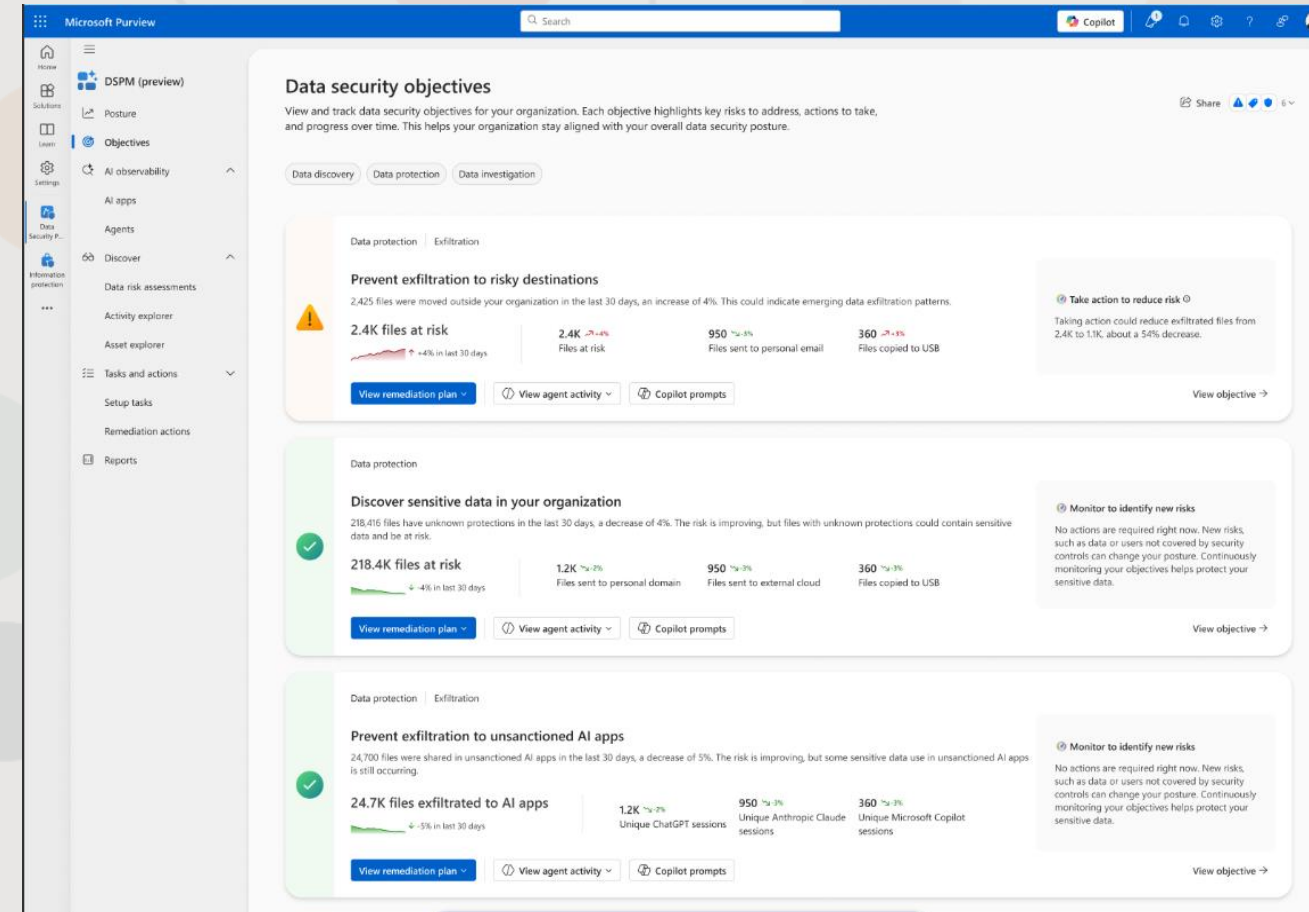

Instead of only showing risks, the system lets you choose a specific data-security outcome (e.g., preventing sensitive data exfiltration), then automatically highlights the relevant risks, metrics, and trends inside your organization.

For each selected outcome, DSPM provides:

A clear view of key risk indicators (e.g., number of sensitive files exposed, how many were exfiltrated to personal domains or external services in the last 30 days).

A recommended, step-by-step action plan, such as creating DLP or IRM policies to block risky behaviors.

Expected impact analysis, showing how each action improves your posture.

Enhanced Microsoft Purview Data Security Posture Management (DSPM) experience

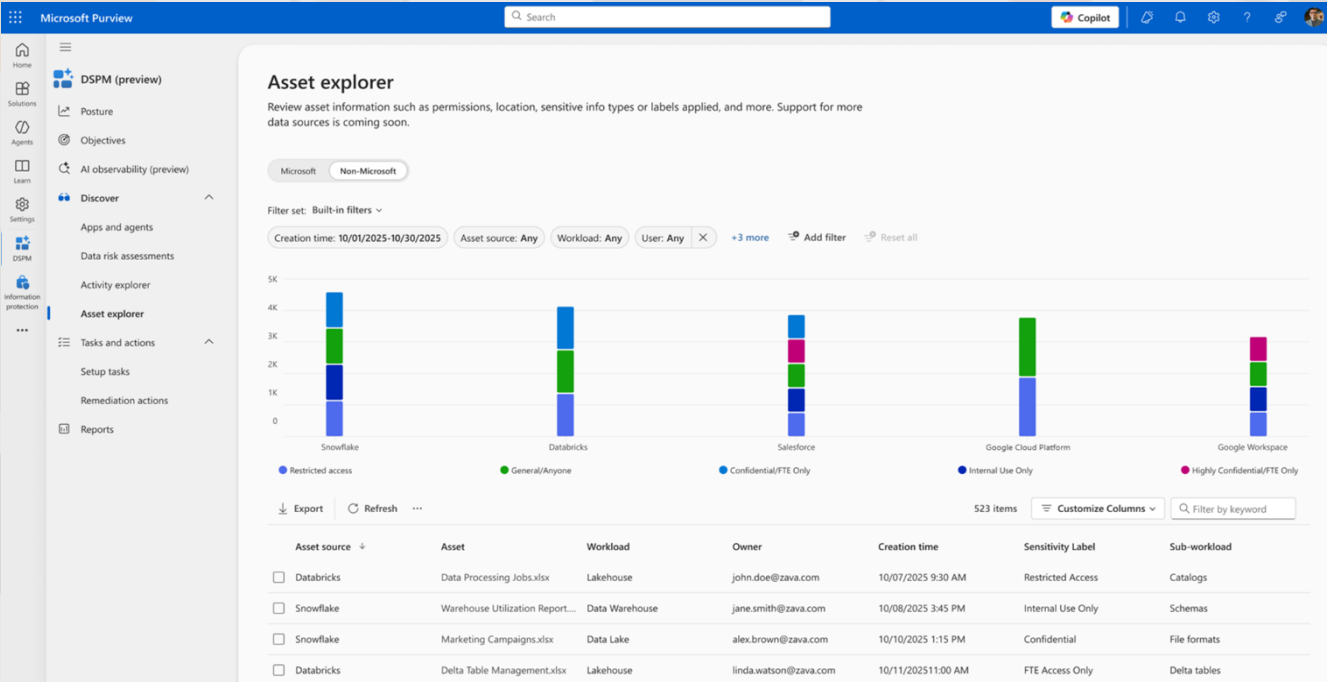

Purview DSPM to include third-party data sources, giving organizations visibility into sensitive data beyond Microsoft 365.

Through integrations with partners Varonis, BigID, Cyera, and OneTrust, and powered by Microsoft Sentinel Data Lake, Purview can now ingest external data signals such as permissions, locations, and sensitivity labels.

Initial supported platforms include:

- Salesforce (Varonis)
- Databricks (BigID)
- Snowflake (Cyera)
- Google Cloud Platform (OneTrust)

With these integrations, organizations get a unified, end-to-end view of data risks across both Microsoft and non-Microsoft environments.

Auto-Archiving for Exchange Online

The_Exchange_Team Platinum Contributor

Oct 07, 2025

Update 10/17/2025: We updated the content of this blog post, the timelines and the FAQ to align with customer feedback we received after initial announcement.

- **Dal 15 gennaio 2026 in tutti i tenant.**
- **Gestisce la crescita rapida di una casella**, che ora non aveva una gestione automatica.
- **Non sostituisce le politiche di archiviazione esistenti**, ma le integra come meccanismo di emergenza, quando la casella arriva al 96% (default) scatta l'archiviazione degli elementi più vecchi.
- **Non abilita automaticamente l'archivio**: deve essere già attivo.
- **Non espande automaticamente l'archivio**: se l'archivio è pieno e l'auto-expanding non è abilitato, il trasferimento fallisce.

E' possibile **disattivare Auto-Archiving** per singole caselle con PowerShell:

```
Set-Mailbox <EmailAddress> -AutoArchivingEnabled $false
```

E' possibile **regolare la soglia** a livello tenant (Num tra 80 e 100):

```
Set-OrganizationConfig -AutoArchivingThresholdPercentage Num
```

Exchange Online Admin API in Public Preview

- In vista della dismissione degli Exchange Web Services (EWS) ad ottobre 2026
- **Non sostituiranno il modulo powershell classico**, solo un sottinsieme di azioni amministrative che potevano essere gestite solo con EWS (es: operazioni di migrazione)
 - **OrganizationConfig** — Read tenant wide MailTips related configuration.
 - **AcceptedDomain** — List accepted domains and core domain settings for the tenant.
 - **Mailbox** — Read mailbox properties and manage Send on behalf delegates (view/update).
 - **MailboxFolderPermission** — List, grant, modify, and remove folder level permissions (Inbox, Calendar, subfolders).
 - **DistributionGroupMember** — Retrieve membership for distribution groups.
 - **DynamicDistributionGroupMember** — Retrieve membership for dynamic distribution groups.
