SharePoint Catalog Management: Create custom group of sites

Summary

SharePoint Advanced Management now allows creating custom site groups via CSV uploads, site properties, and Microsoft Entra ID attributes to improve governance and reporting. Rolling out worldwide June–July 2026, it affects SharePoint and Microsoft 365 admins with no required user changes or migrations.

Administrators can bulk-create **catalog categories from CSV uploads**. Administrators can organize sites using SharePoint site bag properties. Category visibility can be targeted using **Microsoft Entra ID extension attributes**. Organizations can create department, team, or business-based site taxonomies.

Future integrations that will use Catalog groups include:

- Allowing organizations to define governance boundaries and include them in various SharePoint Advanced Management features
- Pay-as-you-go storage management capabilities that will use Catalog groupings for departmental billing scenarios.

Feature update

Admin impact

OneDrive is migrating to the cloud.microsoft domain starting July 2026

New URL format: onedrive.cloud.microsoft

Old format: contoso-my.sharepoint.com

This is a DNS/branding-layer change. Nothing at the data or API layer is touched.

✅ What remains unchanged:

- Microsoft Graph endpoints
- SharePoint URLs for file storage and API calls
- File access, sharing, and permissions
- Consumer OneDrive (live.com)

⚠️ What needs attention:

- Any service or script that pattern-matches or validates OneDrive URLs
- Network allowlists — add *.cloud.microsoft
- Internal runbooks, docs, or training material referencing old URL formats

Rollout: early July 2026 → June 2027.

OneDrive shortcuts can be saved in a dedicated Shortcuts folder

Shortcuts in OneDrive will get an nice update - you will get the option to save new shortcuts to a dedicated Shortcuts folder instead of the OneDrive root. It will help reduce clutter and makes frequently used content easier to find.

Small but really useful feature - I have tons of shortcuts and they make a real mess.

Details:

- ◆ When you add a shortcut in OneDrive, you can choose where to save it (the Shortcuts folder or My files).
- ◆ For file shortcuts only, an Other locations option is also available
- ◆ The Shortcuts folder is created automatically when first used. If a user already has a folder named Shortcuts, that folder is reused.
- ◆ The Shortcuts folder is visually distinct, with a unique color and building icon to make it easy to identify.
- ⚠ Existing shortcuts are not moved.
- ◆ The feature is on by default.

General Availability: July 2026.

Intune: Multi Admin Approval (MAA) is now also enforced on Microsoft Graph API calls

What changed in June 2026?

Before this change, Multi Admin Approval only applied to interactive (delegated) admin actions. A script with an app-only token could create or change protected resources without any approval.

That was a real gap, because a compromised app registration could bypass the whole protection.

With service release 2606, this gap is closed. Application-authenticated (app-auth) API calls through Microsoft Graph are now also intercepted by MAA when the target resource is protected by an access policy.

Microsoft 365 for Business Trials: April 2026 Storage and Data Preservation Update

<https://learn.microsoft.com/en-us/microsoft-365/commerce/try-or-buy-microsoft-365?view=o365-worldwide>

The April 2026 update matters because Microsoft now states the limits and preservation risk in plain terms. The documentation says Microsoft 365 trials are limited to 300 GB of pooled storage, spanning OneDrive, SharePoint Online, and Exchange Online, and that trial-only tenants are limited to 30 days and 300 GB. (Microsoft Learn)

Updated area	What Microsoft now makes explicit	Practical impact
Trial duration	Trial-only tenants are limited to 30 days	Do not plan multi-month pilots on a trial tenant
Storage limit	Trials are limited to 300 GB of pooled storage	Storage is not a per-user allowance
Pooled storage scope	The pool spans OneDrive, SharePoint Online, and Exchange Online	Files, sites, and mailboxes compete for the same tenant-level pool
Exchange Online detail	User mailboxes, shared mailboxes, and group mailboxes count toward pooled storage; archive mailboxes do not	Email-heavy analytics tests can consume trial capacity faster than expected
Trial expiration	Users must be moved or reassigned before the trial expires to keep data, accounts, and configuration	Migration planning must happen before the last day
Billing behavior	Most trial subscriptions convert to a paid subscription unless recurring billing is turned off	Finance and IT ownership should be assigned before the trial starts

Enhanced IntelliFrame with AI data channel for intelligent cameras

Microsoft Teams: Enhanced IntelliFrame with AI data channel for intelligent cameras

■ □ □ IN DEVELOPMENT

ROLLOUT START
August 2026

Microsoft Teams

Teams Rooms on Windows users can now benefit from next generation IntelliFrame features on certified AI-capable cameras with on-device video processing. With IntelliFrame’s expanded AI data channel, participants experience faster active speaker framing, people recognition and labels, and more responsive meeting views—even when network conditions are limited. These capabilities are available with Teams Rooms Pro.

Roadmap ID	Cloud instances(s)	Platform(s)	Release phases(s)

Added to roadmap: 06/17/2026 | Last modified: 06/18/2026

Teams Phone Agent (Frontier): AI auto attendants for Teams Calling.

Add Tools to support your call flow

Tools are automated workflows that you can configure to arm Teams Phone Agent with caller self-service capabilities. Teams Phone Agent supports two Tools:

- **Appointments:** Automate booking and schedule management
- **Q&A:** Answer common caller questions

Configure Tools in the **Templates & Resources** tab in the Teams Admin Center > Voice. You can assign Tools when setting menu options for Teams Phone Agent.

Agents in Teams Phone Agent (Frontier)

Create custom voice agents in Microsoft Copilot Studio to further customize your Teams Phone Agent beyond Q&A and Appointments.

- Create specialized workflows like billing, prescription refill, order status, and more.
- Seamless handoff between Teams Phone Agent and Copilot Studio custom voice agent.
- Escalate to live staff when needed.

Configure Agents in the **Templates & Resources** tab in the Teams Admin Center > Voice. You can assign Agents when setting menu options for Teams Phone Agent.

Enabling Teams Phone Agent (Frontier) ×

You are enabling Teams Phone Agent within Auto Attendant. When enabled, this will effect the following settings:

- **Languages:** Only languages supported by Teams Phone Agent are available. Unsupported languages will be removed.
- **Voice Input:** Voice input is enabled by default.
- **Greeting:** Greeting will default to Teams Phone Agent's greeting, but you can add a custom message.
- **Description:** A new Description column will appear. Use clear prompts for better AI context.
- **Redirect Options:** Adds "Tools" and "Agents & Queues" for call routing.
- **Existing Auto Attendant Settings :**
 - Dial keys will remain unchanged.
 - A new Description column will be added to existing configurations.
- **Resource Account:** A Teams Phone Agent resource account must be assigned to continue.

Migrazione dei telefoni Teams da TAC a PMP

I telefoni teams si gestiranno dal Teams Room Pro Management Portal: <https://portal.rooms.microsoft.com>

4 step di migrazione:

- Phase 1 (Until May 2026)- Preparation and Early Guidance
- Phase 2 (End of June 2026)- Transition Begins
- Phase 3 (July and Aug 2026)- Expanded Capability and Default Experience
- Phase 4 (Sept 2026)- Decommissioning the overlapping Teams device management features in TAC

Quindi:

- Non c'è nulla da migrare
- C'è molto da imparare nell'uso e nella gestione di PMP
- Controllare di avere gli stessi telefoni sia nella TAC che nel PMP
- Controllare le versioni di firmware, devono essere aggiornati
- Smettere di usare TAC e prediligere fin da subito PMP
- Imparare ad usare PMP per gli aggiornamenti ed altre particolarità

Teams Facilitator proactively detects and resolves knowledge gaps in meetings

Facilitator will monitor meeting conversations in real time to detect implicit or explicit information needs.

- ◆ When a knowledge gap is identified, Facilitator performs a web search and posts a response in the meeting chat.

- ◆ Responses are infrequent in practice and typically occur less than once per meeting.

- ◆ Responses are limited to questions relevant to the meeting discussion based on agenda signals and conversational context.

⚠ A user with a Microsoft 365 Copilot (Premium) license must enable Facilitator for the meeting. Other participants do not need to be licensed to receive responses.

- ◆ The feature is supported in standard Teams meetings only and not supported in calls, webinars, or town halls.

- ◆ The experience is supported in meetings that include external or cross-tenant participants.

Refreshed in-meeting experience in Teams

The screenshot displays a Microsoft Teams meeting window titled "Q4 Planning". The top toolbar includes icons for Audio, Video, Share, React, Chat, People (9), Copilot, and a "More" menu. The "More" menu is open, showing a grid of features: Record, Captions, Facilitator, Interpreter, Timer, Notes, Rooms, Speaker C..., Polls, Whiteboard, Youtube, and Planner. Below this grid is a button "Get more apps and agents" and three expandable sections: "View", "Meeting info", and "Settings". The main area shows a gallery of seven participants: Aaron Buxton (circular profile picture), Daniela Mandera, Danielle Booker, Jessica Kline, Kat Larsson, and Allan Munger (circular profile picture). A seventh participant is partially visible on the right. The bottom right corner of the image features the BCch logo, which consists of a cluster of colorful dots above the text "BCch".

Microsoft Teams: Automatic Call Recording & Transcription

Microsoft Teams: Automatic recording and transcription for Teams Call Queues

■ □ □ IN DEVELOPMENT

ROLLOUT START
August 2026

Microsoft Teams

Administrators can enable automatic recording and transcription for Teams call queues. When enabled, calls answered by calling representatives are automatically recorded without manual action. Admins configure the feature per queue via Teams admin center or PowerShell, with controls for recording, transcription and agent access to recordings. Recordings are stored in SharePoint and available through the Queues app call history. Note: Queues app requires a Teams Premium license.

PowerPoint Live in Teams will get an in-meeting presentation refresh

You will be able to refresh your PowerPoint Live presentation during a meeting to load the latest version of the deck without restarting the presentation. This improvement helps presenters stay aligned with last-minute updates and reduces meeting disruption. Finally ! I edit my presentations during meetings quite often (last minute updates, changes for agenda, etc.) and it will help a lot 😊

Details:

- ◆ Presenters will see a new one-click option during a PowerPoint Live session to reload the latest saved version of the presentation.
- ◆ Selecting the button reloads the latest saved version of the presentation.
- ◆ The presentation continues without needing to stop and restart sharing.
- ◆ The feature is available by default.

 General Availability: June 2026.

Meeting recap

Everything in a single Teams app.

- ◆ All your meeting recaps in one place
- ◆ Quick filters to surface the right meeting instantly
- ◆ Audio recap to catch up on several meetings at once
- ◆ Browse any recap from the past 30 days

Targeted for GA in July 2026 (Roadmap ID 564614).

MICROSOFT 365 ROADMAP · COMING SOON

Meeting Recap App for Microsoft Teams

All your meeting recaps in one place — find, filter, and catch up faster.

- One hub for every recap
- Quick filters to surface the right meeting
- Audio recap to review multiple meetings at once
- Browse any recap from the past 30 days

News from Purview

Microsoft Purview Network Data Security (Public preview)

It uses the **same data categories and rules you've already set up** in Purview. You can simply stretch those existing rules to cover network traffic, helping you discover hidden data risks, prevent leaks, or both.

It connects with two main types of security tools:

- **Microsoft Entra Global Secure Access:** Connects directly to set up rules that filter network content.
- **Third-Party Security Tools:** Connects with other web browsers and network security tools (Purview DLP Security Store).
- You configure the integration between Microsoft Purview and the network security solution using the Security Store. This integration establishes the bidirectional communication channel between the network security solution and Microsoft Purview.
- Next, configure a collection policy or data loss prevention policy that defines the conditions, activities, and cloud apps that you want the network security solution to collect and send to Microsoft Purview.

Microsoft Purview Network Data Security

- You configure the integration between Microsoft Purview and the network security solution using the Security Store. This integration establishes the bidirectional communication channel between the network security solution and Microsoft Purview.
- Next, configure a collection policy or data loss prevention policy that defines the conditions, activities, and cloud apps that you want the network security solution to collect and send to Microsoft Purview.
- If you configure content capture in the collection policy, the full conversation that happens between the user and the AI app is captured and sent to Microsoft Purview as well.
- After the data is classified, it's available in activity explorer and activity explorer in DSPM for AI. If a data loss prevention policy is matched, and you have configured alerts, they will be available in DLP alerts.

Microsoft Purview Network Data Security

- With network data security, you can identify, block, and alert on sensitive content that's shared through these interactions:
 - Interactions with generative AI through browsers, apps, and add-ins, such as ChatGPT, Gemini, and Claude.
 - Files uploaded to unsanctioned cloud storage providers, including Dropbox, Box, and Google Drive.
 - Emails and file attachments shared with cloud email providers, such as Gmail.
 - Form submissions through online form services, including Google Forms.
 - Social media posts on common services like Facebook and X.

<https://learn.microsoft.com/en-us/purview/dlp-network-data-security-learn>

Create a DLP policy that uses device scoping

Scope an Endpoint DLP policy to specific device groups (for example, enforce policy only when Finance users access data from Windows devices, and not when the same users work from macOS) using dynamic device groups defined in Microsoft Entra ID.

Block external email from being processed (preview)

It applies to Microsoft 365 Copilot and Copilot Chat, including email summarization and reasoning experiences that use email data.

To set this up, create DLP policies that use the Microsoft 365 Copilot and Copilot Chat policy location with the Email is received from -> External users condition.

When the policy detects that an email was received from a sender outside your organization's accepted domains, Copilot excludes that email from grounding, summarization, and citation.

Copilot continues to use internal Microsoft 365 data sources where permitted, and the user's access to the email itself isn't affected.

The policy evaluates email metadata only (specifically, the sender domain compared against your tenant's accepted domains). The body of the email isn't inspected.

Purview Endpoint DLP Will Detect Sensitivity Labels Inside ZIP Archives

Roadmap item 566617

Microsoft Purview Endpoint Data Loss Prevention will begin detecting sensitivity labels on files inside archive containers, with preview planned for July 2026 and general availability for August 2026.

The change closes a gap that has long mattered in the messy middle between classification and enforcement.

If labels are supposed to travel with data, then stuffing that data into a ZIP file should not make the endpoint forget what it already knows.

A DLP policy normally acts on an item. The item might be a Word document, a PDF, an email attachment, or a file being uploaded through a browser. An archive is a container item whose risk may come from one child file buried inside it. That means the policy engine has to translate the sensitivity of the contained file into a decision about the container.

Microsoft Purview compliance portal: View-only role management enhancements

Microsoft Purview will enable Global Reader and Security Reader roles to view role assignments and scopes in the Purview and Defender portals with read-only access, enhancing compliance visibility without permission changes. Rollout begins late July 2026, requiring no user action but recommending governance review.

Users with Global Reader and Security Reader roles will gain read-only access to the following settings:

- Roles and scope pages in the Microsoft Purview portal
- Permissions page in the Purview portal

EXO – Cross-Tenant Message recall

Da fine settembre 2026 sarà possibile "richiamare" un messaggio anche consegnato verso altri tenant MS365.

Ogni amministratore di tenant deve esplicitamente indicare i tenant che hanno il diritto di richiamare messaggi nel proprio.

- Enable or disable cross-tenant message recall for the tenant.

Setting this parameter to \$True turns on the capability; **\$False (default)** turns it off:

```
Set-CrossTenantRecallConfiguration -CrossTenantRecallEnabled $true
```

- Specify external tenants to add or remove from the allowed list.

Add the tenant IDs of the organizations you trust to perform recalls:

```
Set-CrossTenantRecallConfiguration -AllowedSenderTenantIds @{Add="<tenantId1>","<tenantId2>"}
```

<https://ilmiotenantid.it>
