News from Copilot e M365

Capacity-based Access to Copilot

Starting early August, Microsoft 365 Copilot will offer standard access to certain capabilities, like image generation and file upload, based on service capacity for users without a Copilot license.

Priority access will be given to users with a Copilot license.

Copilot features will be available based on the service's capacity, meaning usage may vary throughout the day.

Users without a Copilot license will receive standard access, while those with the license will get priority access.

Users will be informed if capacity is not available for a specific feature.

No admin action required:

This change will be rolled out automatically, and no admin intervention is needed

MC1117101 - Standard and Priority access to Copilot capabilities

Microsoft Copilot (Microsoft 365): Add topic(s) through Copilot to your existing presentation

Summary

Microsoft PowerPoint for Windows desktop will introduce a new Copilot feature in late July 2025, allowing users to generate and insert new topics and slides that match the existing presentation's style. No admin action is required, but informing users and updating training materials is recommended.

Updated July 10, 2025: We have updated the timeline below.

Microsoft PowerPoint for Windows desktop is introducing a new Copilot capability that helps users expand their presentations by generating new topic ideas and slides. This feature ensures that added content matches the look and feel of the existing presentation, enhancing productivity and consistency.

Microsoft Copilot in Teams: Visual Insight for intelligent recap

Microsoft Copilot in Teams will soon provide intelligent meeting recaps that include content shared on screen, enhancing the summary's richness.

This feature, requiring a Microsoft 365 Copilot license, will be available for various platforms by mid-September 2025, with no admin controls needed. No compliance considerations identified.

This message is associated with Microsoft 365 Roadmap ID [490052](#).

The screenshot shows a Microsoft Teams meeting window titled 'Product roadmap discussion'. The meeting duration is 'Jan 21, 2023 10:00 AM - 11:00 AM'. The interface includes a video player on the left showing a presentation slide titled 'Product Roadmap Discussion' with a timestamp of '2023-05-13 02:12 UTC'. Below the video is a list of speakers: Mona Kane, Babak Shammass, Daniela Mandera, Amanda Brady, and Bruno Zhao. On the right, there's a 'Content' section with files 'Product Roadmap Q4 report.pptx' and 'Marketing budget.docx'. Below that is a 'Notes' section with tabs for 'Notes', 'AI summary', 'Mentions (3)', and 'Transcript'. The 'AI summary' tab is active, showing a note generated by AI. The note is titled 'Meeting notes' and contains five bullet points: 'History of Meeting Intelligence Work', 'Development of Meeting Catch-Up Portal', 'Introduction of GPT Models', 'Collaboration with Teams and Stream', and 'Visual Insights in Meeting Copilot'. Each bullet point is accompanied by a small thumbnail image. At the bottom of the note, there's a 'Feedback from Early Adopters' section.

Meeting notes Expand all

- History of Meeting Intelligence Work: Itai provided a history of the team's work in meeting intelligence, starting with Cortana and evolving to focus on extracting action items from meetings and developing the meeting catch-up portal during the COVID-19 pandemic. 1
- Development of Meeting Catch-Up Portal: Itai discussed the development of the meeting catch-up portal, which started as an internal tool and grew to be used by the entire Microsoft tenant. The portal included features like transcript search, question identification, and action item extraction. 3
- Introduction of GPT Models: Itai shared the team's experience with using GPT models for meeting summarization, starting with GPT-3 and later moving to GPT-3.5 and GPT-4. The team conducted a hackathon in September 2022 to integrate GPT-3.5 into the meeting catch-up portal. 4
- Collaboration with Teams and Stream: The team partnered with the Teams and Stream teams to integrate transcript search into the Stream player. They developed the intelligent recap page, which includes action item extraction and automated summarization. The collaboration involved working with the Sox team to roll out the portal into Teams. 9
- Visual Insights in Meeting Copilot: Itai discussed the development of visual insights in Meeting Copilot, which allows users to ask questions about screen share content and retrieve information from key frames in the meeting recording. 11

Feedback from Early Adopters: Itai highlighted the positive feedback from early adopters of the Teams Copilot, with many users expressing that they would be very disappointed if the feature were taken away. The team continues to

Licensing Update: Copilot in Planner (preview)

Summary

Licensing changes for Copilot in Planner (preview) will take effect in August 2025. Users with only Planner and Project Plan3 or 5 licenses will lose access. Access will continue for users with a Microsoft 365 Copilot license. Update licenses to maintain access if needed.

We're making a licensing change that affects access to Copilot in Planner (preview). This change ensures alignment with Microsoft 365 Copilot licensing and may require action if your organization relies on this capability.

When this will happen:

This change will begin to take effect in early August 2025.

How this affects your organization:

Users licensed only with Planner and Project Plan 3 or Plan 5 will lose access to Copilot in Planner (preview) after this date.

Access will continue for users with a Microsoft 365 Copilot license.

What you can do to prepare:

If your organization depends on Copilot in Planner (preview), consider updating user licenses to include Microsoft 365 Copilot to maintain access.

Microsoft 365 Copilot: Extending Copilot Chat to Microsoft 365 apps

Summary

Microsoft 365 Copilot Chat rollout for Word, Excel, PowerPoint, and OneNote has been delayed. It will be available in Outlook, Word, Excel, PowerPoint, and OneNote for users with and without a Microsoft 365 Copilot license. Admins should adjust settings to "Pin" for non-licensed users to access Copilot Chat.

(Updated) Microsoft Copilot Pages: New file extension for Copilot pages

Summary

Microsoft Copilot Pages will introduce a new .page file extension, identical in functionality to the .loop extension but with a different name and icon. Rollout starts mid-July 2025 and completes by early August 2025. No admin action is required, but user notification is recommended.

Updated July 10, 2025: We have updated the timeline below. Thank you for your patience.

Coming soon: A new .page file extension for Microsoft Copilot Pages. This new file extension will continue to support admin toggles, sensitivity labels, data loss prevention, multi-geo storage, Microsoft Purview eDiscovery, version history, export, audit logs, and data subject requests. The functionality and support for the .page file extension will be identical to the existing .loop file extension. The only difference is the file extension name and file icon.

A Microsoft 365 Copilot license or a Microsoft 365 license is required to access this feature.

This message is associated with Microsoft 365 Roadmap ID 494834.

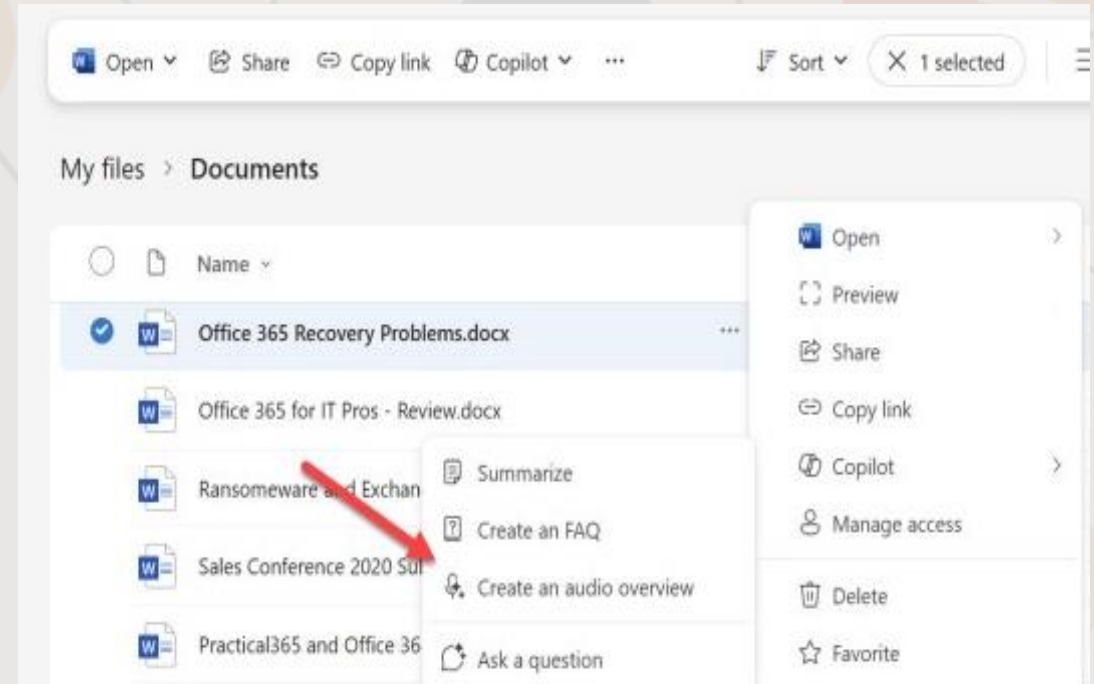

Copilot Audio Overview in OneDrive

Copilot in OneDrive can generate audio overviews of documents, making it easier to understand content while on the go.

To create an audio overview, open the document in OneDrive, access Copilot, and select "Generate an audio overview."

Copilot will then create a narrated summary, which you can listen to using an audio player, potentially adjusting the playback speed or saving the audio file

- Open your document: Navigate to your document in OneDrive (web or mobile)
- In the document, locate and click on the Copilot icon.
- Choose the "Generate an audio overview" option from the Copilot menu.
- Copilot will process the document and present an audio player. You can play, pause, adjust speed, and potentially save the audio file.

Copilot in Outlook Mobile to Highlight E-mails that Need Your Attention

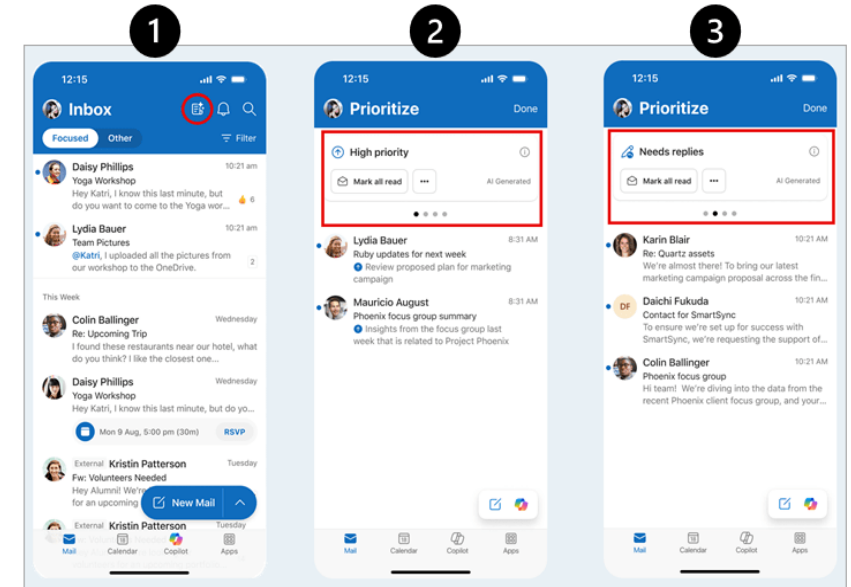

Copilot in Microsoft Outlook for iOS/Android to highlight important emails and those needing a reply

Due late June 2025 to late December 2025.

Copilot in Outlook mobile to highlight emails that need your attention

- When available, go to Outlook *Settings* > *Copilot* > *Prioritize* > *Priority view*
- In your mailbox, select the Copilot sparkle icon (1)
- Swipe between **High Priority** (2), and
- **Needs replies** (3)
- Due late June 2025 to late December 2025

May Update for MTRoA (1449/1.0.96.2025126202)

1449/1.0.96.2025126202 (May 2025)

Introduced in this update:

- **Preview of Facilitator agent note taking in Rooms for offline/ad hoc discussions:** Power your ad-hoc in-person discussions by inviting the Facilitator agent in your Teams Room. Learn more here: [Facilitator in Teams Rooms - Microsoft Teams | Microsoft Learn](#)
- **New Microsoft-managed policy to help further secure your tenants against potential threats to accounts using device code flow (DCF) authentication.**
- **Disabled auto accept for external tenant nudges:** Teams Rooms on Android will now also no longer automatically accept any Proximity joins using an external account for security reasons.
- **Local PTZ controls:** If the camera is not currently auto-framing the room, in-room users can control the Pan-Tilt-Zoom (PTZ) of the active camera to keep the focus where they want it.
- **Speaker recognition and attribution in Teams Rooms on Android:** Microsoft Teams Rooms on Android will soon support Intelligent Speakers, providing advanced speaker recognition to clearly identify who said what in meeting transcripts. This feature significantly enhances Microsoft 365 Copilot and AI Recap, enabling accurate, personalized summaries and actionable insights from your meetings. This capability seamlessly integrates with both intelligent speakers and your existing room speakers via the cloud. Each participant is securely recognized through a unique voice profile, ensuring precise attribution in live transcripts and maximizing the effectiveness of your Teams meeting experience.
- **Proximity join performance and reliability improvements:** These enhancements are for standalone consoles where calls used to drop sometimes and then rejoin automatically a few seconds later.
- **Call Join performance improvements:** Multiple improvements to call join performance in standalone consoles. These improvements should significantly reduce the time it takes for the console to join a meeting, especially the ones with more than 50 participants.

Important Update: Teams Meeting Join URL Validation

Archive

Share

Copy link

Mark as unread

Summary

Microsoft Teams will validate meeting join URLs starting September 30, 2025 (November 30 for GCC/DoD) to prevent altered or rewritten links from being used. Security products must avoid rewriting these URLs to prevent users from being blocked. No admin action is needed, but organizations should update security policies accordingly.

Is this summary helpful?

What and Who

To enhance the security and integrity of Microsoft Teams meetings, we are introducing a new feature that validates Teams meeting join URLs. This update helps ensure that meeting links are not altered or rewritten by security products in ways that could render them unusable or flagged as malicious.

Action Required/Recommendations

- Ensure that your security products do **not** rewrite Microsoft Teams meeting join URLs.
- Whitelist Microsoft Teams join URLs in your security software.
- Review your organization's URL rewriting or inspection policies before the rollout date.
- Communicate this change to your helpdesk and security teams.

Microsoft Teams Meeting Join Bar

The Microsoft Teams meeting join bar is a feature designed to provide a quick and easy way to join live meetings that you've RSVP'd to as "Yes" or "Tentative".

When a meeting is live, a banner will appear at the top of your Teams interface, allowing you to join directly. If multiple meetings are active, the banner will display a count and allow you to view them all.

- RSVP to a meeting: You need to RSVP to a meeting with either "Yes" or "Tentative"
- When the meeting starts, a banner will appear at the top of your Teams interface
- The banner will display the meeting title and have a "Join" button
- Multiple active meetings: If multiple meetings are live, the banner will show a count of active meetings and an option to "View More" to see all of them.

Always-on diagnostics for endpoint DLP (preview)

This feature captures critical diagnostic data from onboarded endpoint devices for issue reporting. Comprehensive trace logs will be automatically recorded and locally stored on devices, so you won't have to reproduce issues to identify their cause anymore. Turning this feature off might make diagnosing endpoint data loss issues harder and cause longer downtime. With this turned on, though, you'll identify risks more easily, troubleshoot faster, and more. [Learn more about always-on diagnostics for endpoint DLP](#)

Introduction of secure workflow to bypass retention/legal holds on OneDrive and SharePoint

We're introducing a new capability in Microsoft Purview Data Lifecycle Management that allows admins to bypass existing retention policies and delete content from OneDrive and SharePoint Online before the retention or hold duration expires. This feature supports organizations managing Copilot-related artifacts—such as Teams recordings and transcripts—independently of OneDrive retention policies, giving admins greater control over how long this content is retained.

This message is associated with Microsoft 365 Roadmap ID 496151

Who is affected:

Admins managing OneDrive and SharePoint Online retention policies
Organizations using Microsoft Purview for data lifecycle management

What will happen:

Admins can create Priority Cleanup policies to delete content before retention or hold periods expire
Feature includes simulation mode, audit logging, and disposition reviews
New admin policy authoring flows are introduced, governed by Microsoft Purview role groups
Feature is not enabled by default; requires explicit policy creation and enforcement
Requires at least two admins to author and enforce a Priority Cleanup policy

Action Required/Recommendations:

Ensure at least two admins are assigned the Priority Cleanup Admin and Retention Management roles
Review and configure role assignments in Microsoft Purview portal
Communicate this change to your compliance and records management teams
Update internal documentation to reflect new policy authoring and enforcement capabilities

Physical badging Connector new sample power shell script

Summary

Microsoft has updated the Microsoft Purview Physical Badging Connector to enhance security. Organizations using this connector must download and apply a new PowerShell script by June 30, 2025, to maintain functionality. Separate scripts are available for Commercial, GCC, GCCH, and DoD environments. No UI or workflow changes are expected.

What and Why

To support the continuous improvement of security standards, Microsoft has updated components of the Microsoft Purview Physical Badging Connector. These updates ensure that Insider Risk Management customers can continue securely uploading physical access data. Organizations using this connector must apply the updated PowerShell script to maintain functionality.

Rollout Schedule

This update was released on June 30, 2025.

Who is affected:

Organizations using Microsoft Purview Insider Risk Management with the Physical Badging Connector in any environment (Commercial, GCC, GCCH, DoD).

What will happen:

The previous PowerShell script used to upload physical badging data will no longer function. A new PowerShell script must be downloaded and applied to continue uploading data. Separate scripts are available for Commercial, GCC, GCCH, and DoD environments. No changes to UI or user workflows are expected.

Nuovo metodo di detect dello spam: Mail Bombing

Mail Bombing Detection technology in Microsoft Defender for Office 365

 Archive  Share  Copy link  Mark as unread

Summary

Microsoft Defender for Office 365 is introducing Mail Bombing Detection to protect against email bombing attacks. This feature will roll out globally from late June to late July 2025, automatically identifying and blocking such attacks. It requires no manual configuration and will be visible in various security tools.

Is this summary helpful?  

We're introducing a new detection capability in Microsoft Defender for Office 365 to help protect your organization from a growing threat known as email bombing. This form of abuse floods mailboxes with high volumes of email to obscure important messages or overwhelm systems. The new "Mail Bombing" detection will automatically identify and block these attacks, helping security teams maintain visibility into real threats.

When this will happen:

General Availability (Worldwide): We will begin rolling out in late June 2025 and expect to complete by late July 2025.

How this affects your organization:

Security Operations Analysts and Administrators will see a new detection type labeled Mail Bombing in the following locations:

- Threat Explorer
- Email entity view
- Email Summary Panel
- Advanced Hunting

NEW FEATURE

Monitor Action in Microsoft's Safe Attachments Policy is Being Retired

The Monitor action in Microsoft's Safe Attachments policy is being retired from the Microsoft Defender for Office 365 service

Specifically, starting in early July 2025 and ending by late August 2025, any existing Safe Attachments policies configured with the "Monitor" action will be automatically changed to the "Block" action

The "Monitor" action allowed administrators to track how the system would handle malicious attachments without actually blocking them.

This was useful for auditing and testing purposes.

However, Microsoft is retiring this feature to streamline the Safe Attachments policy and focus on the more commonly used actions: Block and Dynamic delivery.

Safe Attachment Policy

general

▸ settings

applied to

Safe attachments unknown malware response

Select the action for unknown malware in attachments. [Learn more](#)

Warning

Monitor, Replace and Block actions may cause significant delay to email delivery. [Learn more](#)

Dynamic Delivery is only available for recipients with hosted mailboxes. [Learn more](#)

- ☐ Off - Attachment will not be scanned for malware.
- ☐ Monitor - Continue delivering the message after malware is detected; track scan results.
- ☐ Block - Block the current and future emails and attachments with detected malware.
- ☐ Replace - Block the attachments with detected malware, continue to deliver the message.
- ☒ Dynamic Delivery - Deliver the message without attachments immediately and reattach once scan is complete.

Microsoft Outlook's New Two-Click Feature

The new security protocol introduces an additional verification step when accessing encrypted emails.

When users receive an encrypted message, they will first see a notification stating, “Your organization mandates clicking ‘View Message’ to access the email content”

Only after clicking this button will the encrypted content be rendered and displayed.

This deliberate two-step process ensures that sensitive information isn't automatically displayed, reducing the risk of confidential data being inadvertently exposed when devices are used in public spaces or during screen-sharing sessions

The feature works consistently across Outlook for Windows desktop, Outlook web interface, and Outlook mobile applications for iOS and Android.

By default, the two-click verification will be disabled.
