Entra ID: “Revoke MFA sessions” option will be replaced with “Revoke sessions”

From February 2026, the legacy “Revoke MFA sessions” option will be replaced with “Revoke sessions” in Entra ID.

This new change will:

Invalidate all active user sessions
Signs the user out of all apps and devices.
Clears MFA state regardless of whether it came from:

- Conditional Access
- Per-user MFA

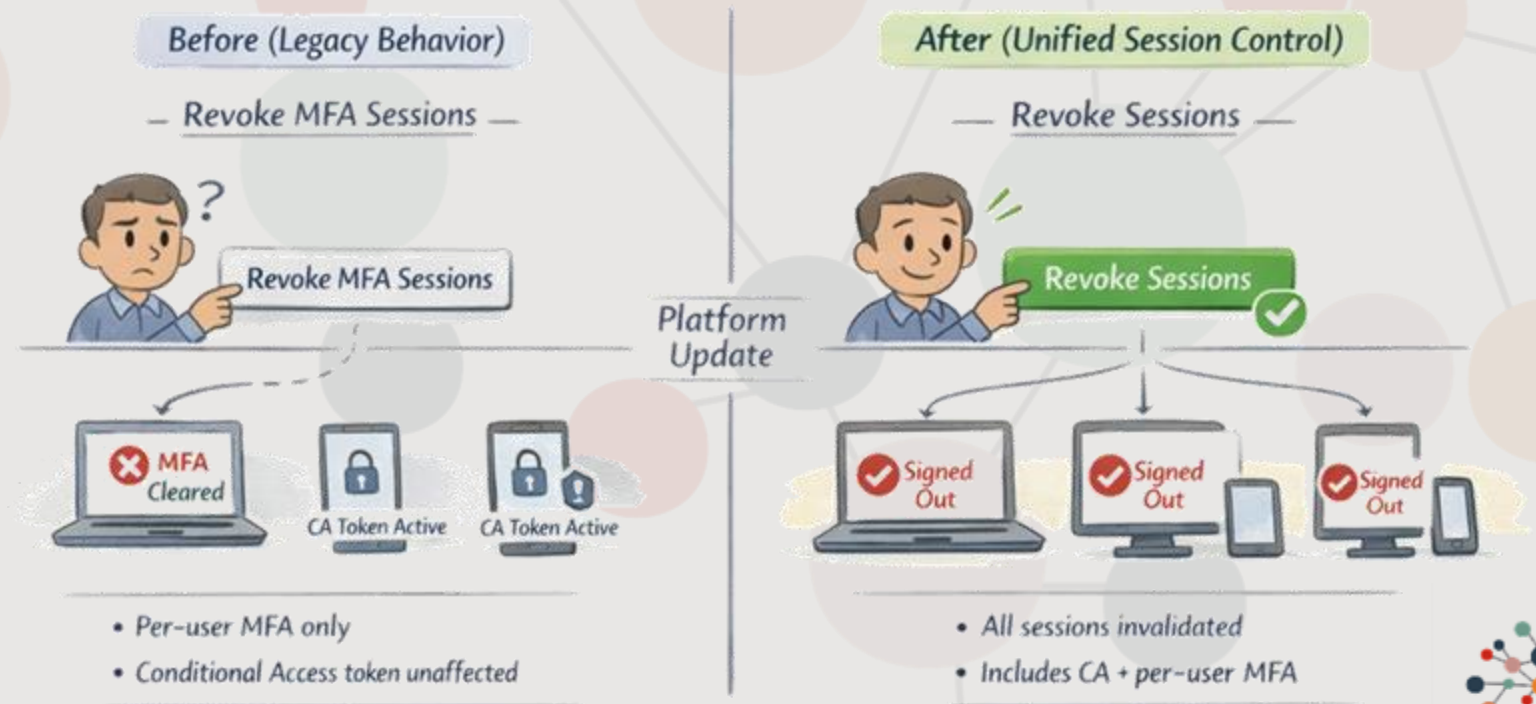

This will happen by default.

This aligns the admin control with how authentication has worked for years in Entra.

It won’t change how you design CA policies, but it does remove a long-standing trap during account containment.

‘Revoke MFA Sessions’ in Entra is getting replaced!

Revoke MFA Sessions vs Revoke Sessions [NEW]

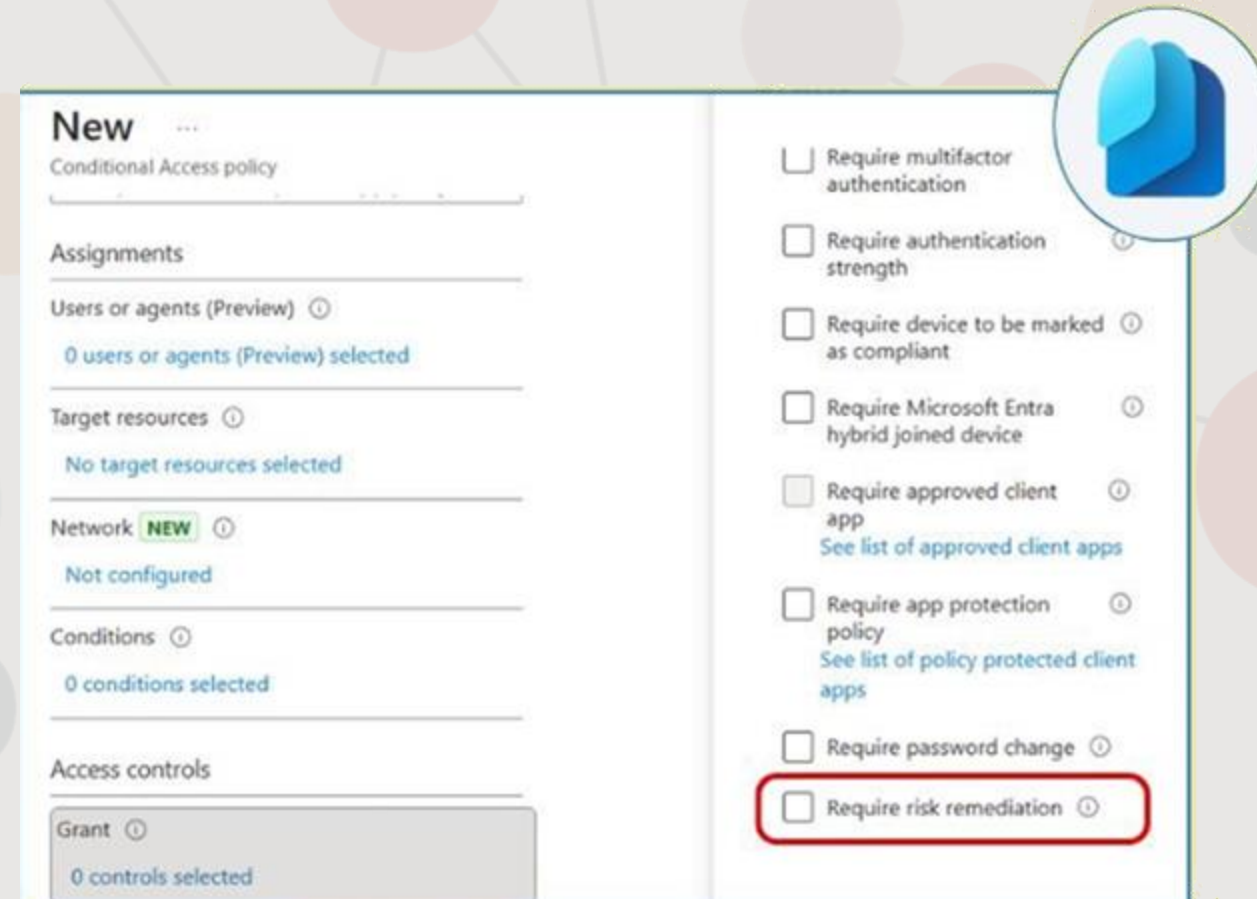

Protect Identities with Require Risk Remediation in Conditional Access

When Require risk remediation is selected, users must remediate detected risk by completing a Microsoft-managed remediation flow.

This applies regardless of the authentication method and works seamlessly with both password-based and passwordless sign-ins, such as FIDO2 keys or Microsoft Authenticator.

1. When a risky user attempts to access a resource, their current session is ended and they are prompted to sign in again right away.
2. Even if they have just authenticated, a second successful sign-in is required to clear the risk.
3. The remediation process is handled automatically, with no additional configuration needed.

This approach allows organizations to respond to risky sign-ins in real time while keeping the user experience simple and consistent.

The screenshot shows the 'New' Conditional Access policy configuration page. The left sidebar contains sections for 'Assignments', 'Target resources', 'Network', 'Conditions', and 'Access controls'. The right sidebar contains a list of policy options, each with a checkbox and an information icon. The 'Require risk remediation' checkbox is highlighted with a red box. A Microsoft logo is visible in the top right corner of the interface.

Microsoft Purview: Data Loss Prevention - DLP support for Fabric warehouses

Microsoft is expanding Data Loss Prevention (DLP) for Microsoft Fabric to include support for Fabric warehouses.

DLP for Fabric is already generally available and helps organizations detect and protect sensitive data stored in structured data within OneLake.

With this update, existing DLP policies can now extend protection to warehouse data, strengthening your organization's overall data security and compliance posture.

Existing DLP policies scoped to the Fabric and Power BI location will automatically begin scanning and evaluating Fabric warehouses in included workspaces.

Admins who monitor DLP policies or billing will see warehouse objects included in the protected asset count in the Microsoft Purview pay-as-you-go invoice.

SharePoint: Legacy SharePoint Online Content Delivery Network (CDN) domain to be retired—review configurations

Summary

The legacy SharePoint Online CDN domain `publiccdn.sharepointonline.com` will be retired by late April 2026. Update all hardcoded references to the new domain `public-cdn.sharepointonline.com` to avoid 404 errors. Validate changes before March 31, 2026, to ensure uninterrupted access to SharePoint resources.

Updated January 8, 2026: We have updated this post as a reminder. Thank you for your patience.

Introduction

As part of ongoing service modernization, Microsoft has migrated the hosting of SharePoint Online static assets to the Microsoft Azure Front Door (AFD) content delivery network (CDN), using the new domain **`public-cdn.sharepointonline.com`**. This migration was previously announced in MC1066155 and completed in July 2025. This message is a follow-up notice to retire the legacy CDN domain **`publiccdn.sharepointonline.com`**.

After this rollout completes, content referenced via the legacy domain will no longer be accessible, and users will receive 404 errors when trying to access resources hosted on the legacy domain.

When this will happen:

General Availability (Worldwide): Rollout begins March 31, 2026, and completes by late April 2026.

How this affects your organization:

Who is affected:

Organizations using SharePoint Online with applications, scripts, or configurations that hardcode the legacy CDN domain.
Developers using SharePoint Framework (SPFx) with hardcoded `cdnBasePath` values.
Admins who have configured domain-based allow lists in their network settings.

Microsoft 365: PAYGO consumption-based meter for your extra SharePoint storage needs

Microsoft is introducing a PAYGO (pay-as-you-go) consumption meter for SharePoint storage (similar to Power Platform, see the image)

Instead of pre-buying fixed “extra storage packs,” you’re billed based on the additional storage you actually consume beyond what your Microsoft 365 licenses already include.

Think Azure-style consumption, but for SharePoint storage.

Active users	Month #1	Month #2	Month #3
App A			
App B			
App C			
Total active users:	9 = 9 different users each active in 1 app	0 apps had active usage	6 = 2 users each active in 3 apps

Microsoft 365 Copilot for Android: Preview and chat with Word, Excel, and PowerPoint files in the Copilot app

Summary

Microsoft 365 Copilot for Android now allows previewing Word, Excel, and PowerPoint files with Copilot Chat, but editing requires switching to standalone apps. Offline access and advanced file management move to standalone apps. Tenant admins should prepare by deploying these apps and updating user communications.

Introduction

We're introducing a **new preview experience** in the *Microsoft 365 Copilot app for Android* that allows users to open Word, Excel, and PowerPoint files and interact with them using Copilot Chat. For editing actions, the Microsoft 365 Copilot app will transition to the fully featured standalone Word, Excel, or PowerPoint apps. This change positions Microsoft 365 Copilot as your AI-first productivity assistant, bringing together activity across Word, Excel, PowerPoint, Outlook, and other Microsoft 365 apps.

What will happen:

Copilot Preview Experience: Users can open Word, Excel, and PowerPoint files in the *Copilot app on Android* and use Copilot Chat for summaries and insights.

Editing Files: Editing will require switching to the standalone Word, Excel, or PowerPoint apps. Users will be prompted to install or open these apps.

Teams, OneDrive, Outlook app integration: These apps on *Android* will continue to show users previews of Office files. Editing will redirect users to the respective standalone apps. The Microsoft 365 Copilot app will no longer handle file open and edit operations from Teams, OneDrive or Outlook.

File Management: File search remains available in *Copilot*. Advanced management will require the standalone OneDrive app.

Document creation: Users can create documents via chat in *Copilot*. Viewing remains in-app; editing transitions to standalone apps.

Offline access: Offline viewing will only be available in the standalone Word, Excel, PowerPoint, and OneDrive apps. “*Make Available Offline*” is being removed from Copilot.

PDF workflows: No changes; PDF handling continues as before.

Folder browsing: Folder browsing from OneDrive, SharePoint, or third-party hosts will no longer be supported in *Copilot*.

Protocol URLs: Opening documents via protocol URLs will require the standalone apps.

Third-Party hosts: Adding third-party host accounts to Copilot will no longer be supported.

Microsoft Lens app will retire

Summary

The Microsoft Lens app for iOS and Android will be removed from stores on February 9, 2026, and scanning will stop on March 9, 2026. Users should switch to OneDrive's scan feature. No admin action is needed; notify users accordingly.

This change applies to the Microsoft Lens mobile app on iOS and Android.

How this affects your organization

The app will be removed from the stores on February 9, 2026. Users who already have the app downloaded on their devices can continue to use the scanning capability in the app until March 9, 2026. After that, users will no longer be able to create new scans in the app. Users can continue to access their previous scans from MyScans in the app after the change while they still have the app on their devices, although this capability will not be supported by Microsoft. Please note that users need to be signed into your last active account on the Microsoft Lens app to access past scans.

MAJOR UPDATE

RETIREMENT

MC1221451 - New policy to add watermarks to content generated or altered by using AI in Microsoft 365

Microsoft is introducing a Cloud Policy in Microsoft 365 that lets organizations add watermarks to AI-generated or AI-altered video and audio content to improve transparency.

When enabled, the policy adds:

- a visual watermark to AI-generated videos (e.g. Clipchamp)
- an audio watermark to AI-generated audio (e.g. Copilot audio overviews from Word)

Applies only to video and audio

Does not apply to images

Image watermarks will be user-controlled via myaccount.microsoft.com (expected H2 Feb 2026)

Availability

General Availability worldwide: second half of February 2026

New request and approval experience for Microsoft agents in the Microsoft 365 admin center

Summary

Microsoft 365 admin center will introduce a new request and approval experience for Microsoft-built agents, enabling centralized management of access requests via the Copilot > Agents & connectors page. Rollout starts February 2026, requires no setup, and enhances admin control over user access.

Introduction

We’re introducing a new request and approval experience in the Microsoft 365 admin center for Microsoft agents. This update enables users to request access to agents—even those currently unavailable due to your organization’s configuration—directly from the Agent Store.

You can manage these requests centrally from the *Copilot > Agents & connectors* page in the Microsoft 365 admin center, streamlining access control and improving visibility into user interest.

Note: This request flow applies exclusively to agents built by Microsoft and does not extend to other agents available in the store.

NEW FEATURE

Microsoft 365 admin center multifactor authentication enforcement

Summary

Starting February 9, 2026, Microsoft will enforce mandatory multi-factor authentication (MFA) for all users signing into the Microsoft 365 admin center to enhance security. Admins should set up MFA now to avoid access issues; users must verify or add their MFA methods.

If you have already set up multi-factor authentication, thank you. No further action is needed at this time. If you have not, please read on.

As part of our ongoing commitment to advancing cybersecurity across our company and products, last year, starting February 2025, [Microsoft began requiring all users to use multi-factor authentication \(MFA\)](#) when signing into the [Microsoft 365 admin center](#).

Starting February 9th 2026, Microsoft will continue to ramp up enforcement, and users will be unable to sign in to the Microsoft 365 admin center without successfully completing MFA.

Implementing MFA in the Microsoft 365 admin center significantly reduces the risk of account compromise, prevents unauthorized access, and safeguards sensitive data. By adding an extra layer of protection beyond standard username and password authentication, MFA makes it harder for attackers to steal data and prevents unauthorized access from phishing, credential stuffing, brute force, or password reuse attacks.

Microsoft Entra: Cross-tenant security group synchronization

Summary

Microsoft Entra introduces cross-tenant security group synchronization, enabling centralized group management and resource sharing across tenants. Public Preview starts late January 2026; general availability begins late April 2026. Admins must opt in, update attribute mappings, and configure cross-tenant access policies to enable this feature.

We're introducing **cross-tenant group synchronization**, a new capability that enables organizations to **synchronize security groups across Microsoft Entra tenants**. This feature simplifies collaboration scenarios by allowing shared access to resources across tenants while maintaining centralized group management. It also streamlines administration of multiple tenants by centralizing group membership control, reducing duplication and manual overhead.

The new group sync functionality will be part of the Microsoft Entra ID Governance / Microsoft Entra Suite [license](#).

Microsoft 365: eSignature Smart Tagging for Electronically Signed Documents

SharePoint will now automatically detect electronically signed documents and mark them as “Signed” as soon as they’re uploaded.

This isn’t just for new files: existing documents that were already e-signed will be updated retroactively and tagged correctly.

To make this more transparent and easier to manage, SharePoint introduces two optional metadata columns that can be added to document libraries:

- Electronically Signed – shows whether the document has been signed digitally
- Signature Provider – shows which eSignature service was used

This capability is only available to tenants with eSignature enabled.

News from Teams e
Teams Phone

Missed call in Queue App

Microsoft Teams Queues Agents are now finally able to see missed calls and have shared call history from other agents in their Queues App. Agents can even mark the call as Resolved or In-Progress to let other agents know the state of the missed call.

For this to work, Teams admins need to create a new Shared Call History Template (Found in Teams Admin Center) and assign the template to the call queue.

Please keep in mind that Teams Premium is necessary for the Agents to use the Queues App.

 IT-Support overview

Browser selection for links in Teams Mobile

Summary

Starting February 2026, Teams Mobile on Android and iOS will prompt users to choose a browser for non-Office and PDF links, encouraging Microsoft Edge use with SSO and enhanced security. The feature is enabled by default, configurable via PowerShell, and allows users to set their preferred browser in app settings.

How this affects your organization

Who is affected: All users of Microsoft Teams Mobile on Android and iOS.

What will happen:

When users tap a non-Office (Word, Excel, PowerPoint) or PDF link, a pop-up will appear at the bottom of the screen (a bottom sheet) prompting them to choose a browser.

If Microsoft Edge is not installed and the user selects Edge, they will be prompted to download it.

A new Links in Teams setting will appear in Teams Mobile settings

Admins can manage this feature using PowerShell:

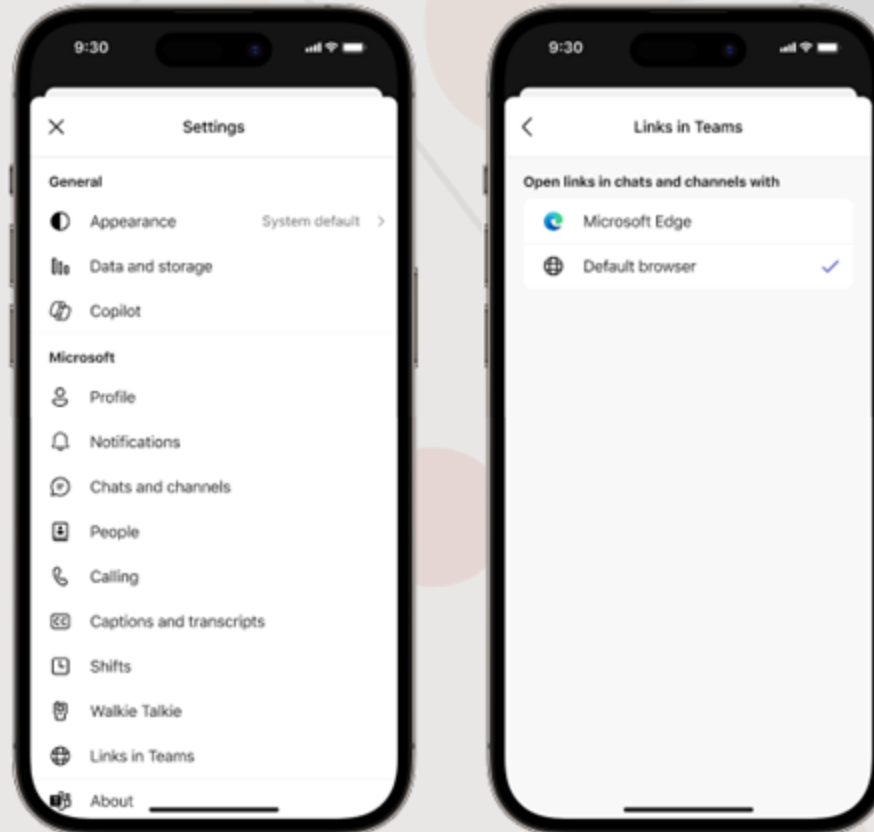

Policy name: TeamsMobilityPolicy

Attribute: LinksInTeams

Allowed values:

OfferBrowserOptions — enables the feature

UseSystemDefaults — disables the feature

MC1219793 – (Updated) Brand impersonation protection for Teams Calling

Brand Impersonation Protection for Teams Calling adds proactive safeguards against fraudulent or deceptive external callers who attempt to appear as trusted organizations.

This helps reduce social-engineering risks and improves tenant security when users receive first-contact external calls.

This update aligns with Microsoft's ongoing investments in caller identity protection and secure collaboration. This message is associated with Microsoft 365 Roadmap ID 543239.

Targeted Release: Rollout will begin mid-March 2026 (previously mid-February) and is expected to complete by late March 2026 (previously late February).

General Availability: Timelines will be communicated in a future message.

Teams application update needed to enable Explicit Recording Consent feature on Teams Phone Devices

Summary

Microsoft Teams Phone Devices will require app version 1449/1.0.94.2025443703 to enable Explicit Recording Consent for 1:1 VoIP calls starting January 2026. Administrators must update devices before enabling this policy, which prompts participants for consent before recording or transcription begins.

Introduction

To enhance transparency and user control, Microsoft Teams Phone Devices is expanding the **Explicit Recording Consent** feature to include **1:1 Teams VoIP calls**. This feature will become generally available in **January 2026**.

It ensures participants must provide explicit consent before their media (audio only) is included in any recording or transcription initiated by another user. This change supports privacy compliance and aligns with customer feedback requesting more granular consent controls.

The minimum application version required for this feature is **1449/1.0.94.2025443703**. If the policy is enabled and the app version is below this minimum, users will be unable to provide consent, resulting in their audio being disabled once recording or transcription starts in 1:1 VoIP calls. We recommend enabling this feature only after all Teams Phone Device endpoints have been updated to **1449/1.0.94.2025443703**.

Who is affected:

Microsoft Teams administrators managing calling policies.

Users participating in 1:1 Teams VoIP calls where recording or transcription is initiated.

Note: Public Switched Telephone Network (PSTN) endpoints will be auto-consented. Explicit consent support for PSTN will be included in a future release.

What will happen:

This feature applies to **Teams Certified Phone Devices**.

By default, **Explicit Recording Consent is OFF** and must be enabled by administrators using a policy.

When enabled:

- Users initiating recording or transcription in 1:1 calls will trigger a consent prompt for the other VoIP participant.

- Until consent is granted, the participant's audio will be disabled and excluded from the recording.

- PSTN users are not impacted as they will be auto-consented.

Administrators can apply this policy tenant-wide or to specific users.

Microsoft Teams: Private chat for organizers and presenters in structured meetings, webinars, and town halls

Summary

Microsoft Teams will introduce a private chat for organizers, co-organizers, and presenters in structured meetings, webinars, and town halls, unifying backroom chat behavior across town halls. Rollout begins March 2026, affecting meeting policies and requiring admin review and communication.

Introduction

We’re introducing a private chat feature for organizers, co-organizers, and presenters in structured meetings and webinars in Microsoft Teams. This separate chat enhances collaboration by allowing key participants to communicate privately before, during, and after the event, without involving attendees. Additionally, we are **unifying backroom chat behavior in town halls** to ensure consistent functionality across all structured meetings. Currently, backroom chat behavior varies depending on whether streaming chat is enabled for town halls and whether the organizer has a Teams Premium license. This update removes that inconsistency.

This message is associated with Roadmap ID [392328](#) and applies to Teams for Windows desktop, Teams for Mac desktop, Teams for the web, Teams for iOS/Android, MTR-W and MTR-A devices.

What will happen:

New private chat for organizers, co-organizers, and presenters: This chat is separate from attendee chat and is available before, during, and after the event.

Unified backroom chat policy for town halls: The default setting will be ON for all town halls, regardless of streaming chat availability or license type.

Existing town halls will adopt the new policy once meeting options are updated.

If admins turn the backroom chat policy OFF, previously enabled town halls will lose access after update.

Non-TPre town halls (those without a Teams Premium license) will have backroom chat ON by default after rollout and update.

News from Purview

Microsoft Purview | Compliance Manager - AI Powered Regulatory Templates

Summary

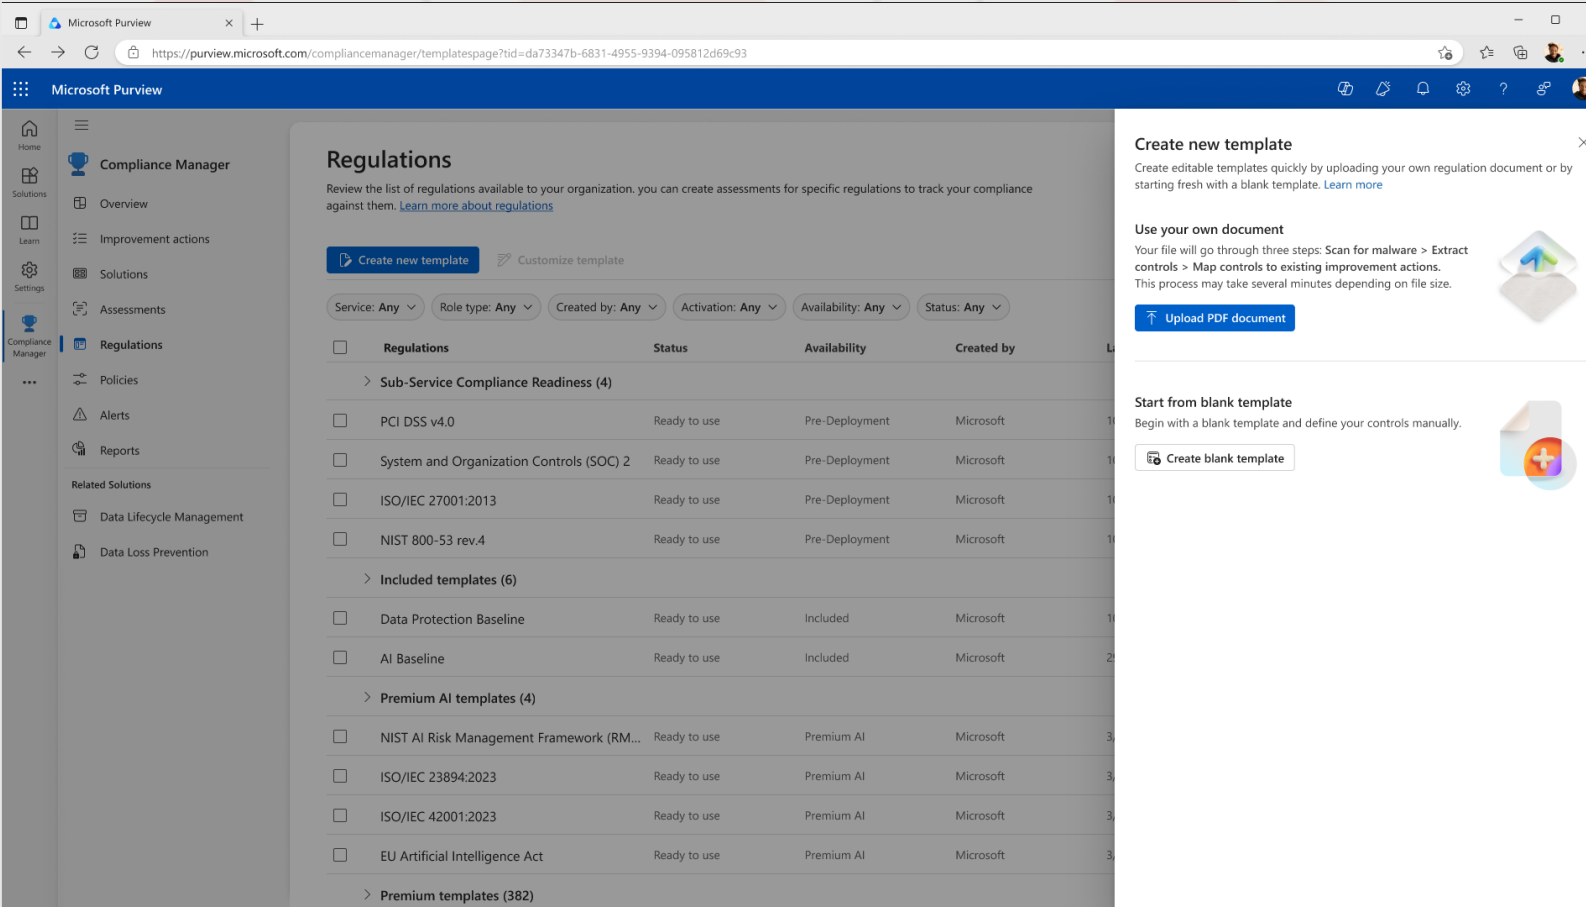

Microsoft Purview Compliance Manager will introduce AI Powered Regulatory Templates to convert regulatory PDFs into actionable controls, simplifying compliance assessments. Public preview starts mid-November 2025; general availability begins early August 2026. The feature is additive, requires no action to enable, and supports multi-cloud compliance automation.

Introduction

To help organizations streamline compliance efforts across multi-cloud environments, Microsoft Purview Compliance Manager is introducing **AI Powered Regulatory Templates**. This feature enables customers to convert complex regulatory PDF documents into actionable controls, making it easier to create assessments, identify compliance gaps, and implement controls. This enhancement aligns with customer feedback requesting simplified regulatory mapping and automation.

What will happen:

- A new option will be available to convert regulatory PDF documents into templates.
- These templates can be used to create assessments within **Compliance Manager**.
- There is no impact to existing workflows or data processing.
- The feature is additive and does not require changes to current configurations.
- The feature will be available by default once rolled out.

Microsoft Purview DLM: Retirement of SharePoint online information management and in-place records management features

Introduction

We're retiring several legacy SharePoint Online features to streamline compliance and data lifecycle management. Starting April 2026, the following features will be retired:

Information Management Policies

In-Place Records Management

Document deletion policies (deletion only)

We recommend using **Microsoft Purview Data Lifecycle Management** and **Purview Records Management**, where we continue to invest in modern, flexible compliance solutions.

What will happen:

These features will no longer be supported by Microsoft.

These features may disappear from the user interface (UI).

Configurations will not be available through UI or programmatically (including enable/disable actions).

Backend services supporting these behaviors may stop functioning.

What you can do to prepare:

Microsoft won't automatically migrate your older information management and SharePoint records management features in SharePoint Online.

If you choose not to migrate to supported features, the older features may no longer be supported.

Between now and April 2026, you have the flexibility to migrate your scenarios on your own schedule. To prepare:

Review current use of legacy features and confirm compliance goals.

Plan migration to **Microsoft Purview Data Lifecycle Management** and **Purview Records Management**.

Audit retention schedules for duplicates or outdated policies.

Confirm applicable licenses for Purview features.

Implement modern features and verify functionality using tools like **Policy Lookup**.

Communicate this change to your Data Lifecycle and Records Management teams.

Microsoft Purview | Data lifecycle Management cmdlet connectivity change

Summary

Starting January 31, 2026, admins must use Exchange Online PowerShell v3.9.0+ and include the -EnableSearchOnlySession parameter with Connect-IPPSession to run Data Lifecycle Management cmdlets. This change enhances security and affects specific retention compliance cmdlets, with no impact on Purview portal users.

Introduction

Connectivity changes between cmdlets and Microsoft 365 services like SharePoint and Exchange now require a new parameter for improved security and modern authentication. Starting Jan 31, 2026, Admins must use [Exchange Online PowerShell v3.9.0](#) or later and include the -EnableSearchOnlySession parameter when running [Connect-IPPSession](#) to execute Data Lifecycle Management cmdlets.

What will happen:

You must use Exchange Online PowerShell v3.9.0 or later.

You must include the -EnableSearchOnlySession parameter when running Connect-IPPSession.

This applies to the following cmdlets:

[New-RetentionCompliancePolicy](#)

[Set-RetentionCompliancePolicy](#)

[New-RetentionComplianceRule](#)

[Set-RetentionComplianceRule](#)

No impact for users accessing Data Lifecycle Management through the Purview portal.

Cmdlets remain incompatible with **Certificate-Based Authentication (CBA)**.

Rimosso il limite di invii giornalieri esterni per mailbox (2000)

Exchange Online canceling the Mailbox External Recipient Rate Limit

The_Exchange_Team Platinum Contributor

Jan 06, 2026

We're announcing an important change: **the Mailbox External Recipient Rate Limit in Exchange Online is being canceled indefinitely at this time.**

Customers have shared that this limit creates significant operational challenges, especially given the limited capabilities of bulk sending offerings available today. Your feedback matters, and we're committed to solutions that balance security and usability without causing unnecessary disruption.

Our goals remain the same:

- **Combat abuse** of Exchange Online customers, like spam and malicious email activity.
- **Prevent misuse** of Exchange Online, such as line-of-business (LOB) applications sending bulk email through Exchange Online.

However, we plan to address these issues in ways that are **less disruptive to your business workflows**. This means smarter, more adaptive approaches that protect the service while respecting your operational needs.

What's not changing

The **Recipient Rate Limit** and the **Tenant-level External Recipient Rate Limit** mentioned in [Exchange Online limits](#) remain unchanged by this announcement.

Thank you for your continued feedback and partnership. We're listening, and we'll keep working to make Exchange Online secure, reliable, and customer friendly.

Source of Authority degli utenti in GA

January 2026

General Availability - Ability to convert Source of Authority of synced on-prem AD users to cloud users is now available

Type: New feature

Service category: User Management

Product capability: Microsoft Entra Cloud Sync

We're pleased to announce the general availability of object-level Source of Authority (SOA) switching for Microsoft Entra ID. With this feature, administrators can transition individual users from being synced with Active Directory (AD) to becoming cloud-managed accounts within Microsoft Entra ID. These users are no longer tied to AD sync and behave like native cloud users, giving you greater flexibility and control. This capability enables organizations to gradually reduce dependence on AD and simplify migration to the cloud, all while minimizing disruption for users and daily operations. Both Microsoft Entra Connect Sync and Cloud Sync fully support this SOA switch, ensuring a smooth transition process.

For more information, see: [For more information, see: Embrace cloud-first posture: Transfer user Source of Authority \(SOA\) to the cloud.](#)

Updated Exchange Online SMTP AUTH Basic Authentication Deprecation Timeline

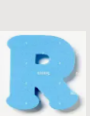

The_Exchange_Team Platinum Contributor

Jan 27, 2026

We understand that many customers continue to face real challenges modernizing legacy email workflows and need sufficient time to adopt viable, secure alternatives. Based on customer feedback and visibility into adoption progress, we are refining the [Exchange Online SMTP AUTH Basic Authentication Deprecation](#) timeline to provide clearer milestones and additional runway.

- **Now to December 2026:** SMTP AUTH Basic Authentication behavior remains unchanged.
- **End of December 2026:** SMTP AUTH Basic Authentication will be **disabled by default for existing tenants**. Administrators will still be able to enable it if needed.
- **New tenants created after December 2026:** SMTP AUTH Basic Authentication will be **unavailable by default**. OAuth will be the supported authentication method.
- **Second half of 2027:** Microsoft will announce the **final removal date** for SMTP AUTH Basic Authentication.

These updates are intended to give customers more time to plan, validate, and deploy modern authentication alternatives, while maintaining a clear path toward stronger default security.

Microsoft Defender for Office 365: Enhancing the quarantine experience for administrators

Summary

Microsoft Defender for Office 365 is enhancing quarantine for admins by listing messages by individual recipients, improving backend durability, and requiring message release per user. Rollout begins January 2026, completing by March. No changes affect end users. Admins should update practices and documentation accordingly.

What will happen:

- Quarantined messages will now be listed by individual recipient instead of grouped by multiple recipients.
- Backend enhancements will improve durability and consistency.
- Existing quarantine release cmdlets will all remain functional. Administrators should be cognizant that ``ReleaseToAll`` now applies to a single user as aggregation has been removed. Admins must release messages for each intended mailbox individually.
- No changes to end-user experience.

Updated quarantine view showing **individual recipients listed separately** in the Recipient column

HideFromAddressListEnabled across tenants via Entra Cross-Tenant Sync

Microsoft is now syncing HideFromAddressListEnabled across tenants via Entra Cross-Tenant Sync.

If a user is hidden in the source tenant, they'll stay hidden in the target tenant too.

- A backfill process will correct visibility for already synced users.
- Dual-write ensures all future syncs maintain the same behavior.
- There's no impact on mail flow, sign-ins, or collaboration workloads.
- This is a small attribute change, but for anyone operating cross-tenant identity at scale, it's a meaningful correction that removes a long-standing inconsistency between Entra and Exchange.
